NELSON COLLEGE.

THERE is little in the proceedings of the year just ended to call for special remark on the part of the Governors. In fact, when an institution is doing its work steadily and successfully, without noticeable change of any kind, there cannot be much occasion for comment on the part of its managers.

The Governors pointed out in their report of last year that sudden and unlooked for changes in the teaching staff, without any concurrence on their part, had had the ordinary effect of reducing the

number of pupils.

The comparative statement of the rolls for 1881 and 1882 shows that the number of pupils upon the roll during the latter half of the year 1881 has remained without substantial alteration, and, looking to the absence of any material increase in the population, and to the competition arising from the establishment of Government high schools in almost every centre of population in the colony, the Governors of Nelson College look with satisfaction upon the position which the institution under their management continues to maintain.

The accounts appended to this report show that the balance of receipts over expenditure during the twelve months under review amounts to £400.
