MENTAL HOSPITALS OF THE DOMINION.

(REPORT ON) FOR 1940.

Presented to both Houses of the General Assembly pursuant to Section 78 of the Mental Defectives Act, 1911.

The DIRECTOR-GENERAL to the Hon. A. H. NORDMEYER, Minister in Charge of the Department of Mental Hospitals. Sir,-

Wellington, 1st June, 1941.

I have the honour to present my annual report upon the work of the Department of Mental Hospitals for the year ending 31st December, 1940.

STATISTICAL.

There were 8,370 names of persons upon our register at the end of the year, including 40 patients and boarders at Ashburn Hall private licensed institution and 624 patients and boarders who were absent on probation in the care of relatives and friends.

In actual residence in our eight State hospitals on 31st December there were 7,706 persons an increase of 17 compared with the previous year and of this number 7,394 were subject to a reception order, whilst 312 were voluntary boarders.

There was a decrease of 50 in the number of those admitted for the first time, and 355 ex-patients and boarders returned for further treatment.

Of all classes of admissions we were able to discharge 906, or 59.2 per cent., calculated upon the number admitted, but no more than 516, or 31.08 per cent., were fully recovered at the time of discharge.

This number falls far short of the true recovery rate, as patients who go on probation and do not send a medical certificate or report to the institution require to be discharged as "unrecovered."

We discharged 107 persons suffering from congenital mental deficiency. These patients do not recover, but many have sufficiently stabilized to be left in the care of friends and relatives, and a number have been absorbed into remunerative employment.

VOLUNTARY BOARDERS.

ALTERATIONS, ADDITIONS, AND IMPROVEMENTS.

Capital expenditure incurred upon new buildings, additions, and improvements amounted to £126,644 during the year, made up of the following items :

Auckland (£2.659).

Additions to the Nurses' Home and the crection of a new hairdressing-salooa have been completed. A new glasshouse has been erected.

The general roading has been improved during the year.

1 -H. 7.

Kingseat (£45,095).

The Nurses' Home is almost ready for occupation.

A start has been made on the crection of seventeen staff residences.

Two villas have been renovated and painted.

Roading, drainage, and water-supply services have been extended where necessary.

A new glasshouse has been erected.

Tokanui (£13,662).

The villa for male patients has been completed.

The general roading has been improved and extended where necessary.

The electrical reticulation has been overhauled.

Porirua (£6,843).

 Λ suitable building for occupational therapy work has been provided by alteration of the old workshop.

Extensive repairs to the cow-byres have been started.

Work on the sewerage system has continued during the year.

Nelson and Ngawhatu (£34,119).

Three male villas have been completed. Roading has been extended and improved.

Hokitika (£10,233).

A new butcher's shop is in course of erection. The new Nurses' Home is nearing completion. Extensions to the laundry and installation of new machinery will be completed at an early date. Improvements have been carried out to the water-supply.

Christchurch ($\pounds 6,032$).

Alterations have been made to the main store. New laundry equipment has been installed.

Templeton Farm Colony (£7,294).

A new male villa is in course of crection.

Seacliff (£707).

The telephone system has been overhauled. The water-supply has been improved.

Programme for Current Year.

Subject to modification due to war conditions, the principal proposals for the ensuing year are :--- Auckland. It is proposed to rebuild the boiler-house on a new site.

It is hoped to provide an occupational block for Male 3 patients.

Kingseat.—Seventeen staff cottages are being erected.

Tokanui. -Negotiations have been entered into with the County Council for the tar-sealing of the Otorohanga - Te Mawhai Road.

Plans are well forwarded for the new services block.

Porirua.—The provision of separate dining-rooms, additional office accommodation, and enlargement of the main hall are all under consideration.

Nelson. Plans are in preparation for the rebuilding on the villa system of the old Nelson City Mental Hospital.

Hokitika.—The Nurses's Home is in course of erection, and its completion will pave the way for additional store accommodation.

Christchurch. A new villa at Jenkins Farm is under construction.

Improvements to the children's playground and the erection of additional farm sheds at Templeton are to be proceeded with.

Searchiff.—The main building at Waitati is overdue for replacement and plans are being considered.

THE STAFF.

Our male staff has made a good response to the call to service, and four of our medical officers and one hundred other officers from the clerical, nursing, and artisan staff have gone overseas. Most of the staff who are eligible have been and are being released for training in the territorial

Most of the staff who are eligible have been and are being released for training in the territorial camps. These absent officers have been replaced, so far as possible, by the engagement on a temporary basis of men ineligible for service, and so far we have had remarkably little interruptions of normal routine.

Many of our senior officers have sons and daughters on active service, and to them we extend good wishes for health and safety.

As could be expected, many of our nurses have married men about to go on active service, and we have so far as possible retained their services, thus benefiting both the nurse and the Department.

The shortage of suitable female trainces persists, and it is little consolation to know that a similar scarcity is being experienced in other countries.

A recent amendment to the Nurses and Midwives Registration Act enables our trainees, after following the prescribed course of study, to sit for the State Preliminary Examination for general trained nurses. This year eight of our trainees entered, and all were successful.

With a view to accelerating the promotion of our most promising younger male staff an examination to qualify for promotion to Head Attendant has been instituted, and the successful candidates have all been of a good type.

THE WAR AND MENTAL DISORDERS.

Contrary to widely expressed popular belief, there is no reason to anticipate anything but a very small incidence of mental disorders amongst our soldiers on active service. Apart from the fact that our soldiers are a specially selected group between certain age-limits, past experience has clearly demonstrated that stable, fit, and disciplined men sharing a common interest with their fellows, and actuated and exalted in a cause they believe to be a just one, can face the extremes of danger and privation without losing their mental balance.

It is of interest to note that out of approximately 6,000,000 troops who served between 1914 and 1918, the cases of insanity regarded as caused or aggravated by war numbered only 13,030.

In New Zealand during approximately the same period only 264 soldiers who had served overseas were admitted to mental hospitals.

Similar considerations would seem to apply to the civilian population of Great Britain to-day, as reports all seem to indicate that, in spite of the front-line positions of civilians, there has been no appreciable increase in the incidence of mental disorders.

Experience of the last war indicated that the less stable and those who are mentally less well equipped than what we regard as "normal" would not be able to make a successful readjustment from civilian to military life. It was therefore arranged that the rolls of recruits should be submitted to this Department with a view to the removal of the names of all ex-patients from the Active Service list. This measure combined, with the disclosure under the stress of camp life of mental instability and deficiency not obvious upon first examination, has undoubtedly, prevented much wastage in training and transport.

At the time of writing- that is, after fifteen months of war--only two soldiers and two sailors who have been on active service overseas have been admitted to our hospitals, whereas in the same period twenty-one soldiers have been admitted from training camps in New Zealand.

Appreciation.

I desire to express my keen appreciation of the work done throughout the year by the staffs of the Department and by other helpers, many of whom act in an honorary capacity. Owing to the wartime need for abbreviation of reports it has not been possible to make individual reference to services rendered but I am none the less grateful.

T. G. GRAY, Director-General.

AUCKLAND MENTAL HOSPITAL.

Dr. Buchanan reports :---

The total number of cases under care during the year was 1,851, with a weekly average of 1,285. The total admissions numbered 405—under certification 131 males, 151 females; by transfer 13 males, 5 females; on remand 6 males, 2 females; and as voluntary boarders 54 males and 43 females.

During the year 180 patients (87 males and 93 females) and 98 voluntary boarders (51 males, 47 females) were discharged. Transfers to other hospitals numbered 48 (22 males, 26 females).

At the end of the year 153 patients were on probation and 69 on full parole and 151 on limited parole.

I append figures relative to the Psychiatric Clinic held at the Auckland Public Hospital by Dr. Hunter and myself:

In company with Mr, \mathcal{F} , \mathcal{K} . Hunt, visits were regularly paid to the Inebriates' Homes on Rotoroa and Pakatoa Islands. The health of the inmates there has been satisfactory.

The addition to our staff of two specially trained Occupational Therapists from England Miss Imman and Miss Trotter – was an event of considerable importance. We had already introduced occupational therapy to this hospital. The interest of some of our staff helped the movement to a great degree, but with the advent of the two new officers a trained directional force made itself immediately felt with most beneficial results. The work is becoming well established, and in time it will embrace the whole institution. The gradual influence of this work in chronic patient wards is specially encouraging better behaviour and less destruction is the result of attracting the interests of the immates. However, this is by no means an easy task.

A decided help to our occupational development was the recognition by the Health Department of our hospital as a training-school. Trainees were sent for tuition to fit them to instruct returned soldiers in therapeutic occupation when the time comes. These students, along with trainees from the Seacliff Mental Hospital, have been very helpful. They certainly had the benefit of expert training, and the practical application of their schooling was helpful both to themselves and to the patients.

The year's progress in occupational work is encouraging. However, the objective will not be actually attained until at least 90 per cent. of the inmates are engaged and interested in some form of ploy. The average number engaged was 55 males and 227 females.

New additions and constructions comprise a hairdressing-saloon of attractive appearance, erected in the grounds for the use of female patients, to whom it gives a considerable amount of interest, besides undoubtedly stimulating personal pride which is of therapeutic value.

The additions to the Nurses' flome have been completed.

An entrance hall to F. 7 made by the alteration of a dormitory gives an attractive introduction to the hospital to newly arrived patients.

A glasshouse was built for the nursery garden.

The usual general painting and maintenance programme was carried out, but many other minor, though important, works received attention.

The annual bazaar was held in December and, thanks to the enthusiasm of the Matron, the staff, and friends, the sum of $\mathfrak{L}240$ was realized.

Mrs. Morrison, an old friend of the hospital, instituted a bowling club for the women patients. This was a great success and certainly will be continued in the coming year.

Like every other hospital, we are beginning to feel the effects of the war. Many of our staff have been called up, and suitable replacements have not been easy. Our best wishes go out to those who have gone on service.

There is an inevitable shortage of Medical Officers, which throws much extra work and responsibility on those remaining. I would like to express my gratitude to my Medical Officers for the way in which they have uncomplainingly accepted the additional burden.

The nurses have formed a Patriotic Club, and during the year have provided many useful and needed articles for the Forces.

Four nurses entered for the State Preliminary Examination, and it redounds to their credit that they all passed.

We have all felt a great loss in the death of the Rev. Mr. Rattray. During the time he was associated with us he proved himself a genuine and interested friend to all.

Finally my thanks are due to all the members of the staff for their helpful work during the year.

KINGSEAT MENTAL HOSPITAL.

Dr. HUNTER reports : -

The total number of patients under care during the year was 711 (381 males and 330 females), with a weekly average of 636. Patients admitted for the first time numbered 10 (5 males and 5 females) and 2 male patients and 2 female patients were readmitted during the year. Patients admitted by transfer were 96 (70 males and 26 females). Transfers to other hospitals numbered 5 (3 males and 2 females). There were 9 patients (4 males and 5 females) discharged, and there were 15 deaths (9 males and 6 females).

The total number of voluntary boarders under care during the year was 16 (10 males and 6 females), with a weekly average of 11. Boarders admitted for the first time numbered 6 (4 males and 2 females). One female was readmitted. There were 6 male boarders discharged, and there were no deaths.

The general health of both patients and staff has been excellent.

Owing to the outbreak of war there has been a slowing-down of building activity. The Nurses' Home, which was commenced the previous year, has been completed, furnished, and equipped, but the opening has been delayed due to the non-arrival of sewage pumps, which are expected in February, 1941.

The 300,000-gallon water-storage reservoir has been completed and connected with our previous supply, but the direct main from the new reservoir to the hospital, although installed, has not been connected up.

A male villa, No. 7, has been opened by the transfer of 50 patients from Porirua.

Villa 8, another villa for male patients, is being used as a temporary Nurses' Home, and the opening of the new Nurses' Home early in 1941 will release accommodation for a further 50 male patients.

The increasing number of patients and staff is overtaxing the accommodation available for entertainments. More patients than can be accommodated are wanting to attend the various enter-tainments and recreations. I hope that this difficulty will be overcome in the near future by the building of a hall.

I regret that the Hospital has lost, through ill health, the services of Miss M. A. McNoe, who retired on 1st December. She has been at Kingseat since 1932, when Villas 1 and 2 were opened, and, together with Mr. Fowlie, the Head Attendant, has given of her best to promote the welfare of the patients and to bring the hospital up to its present standard of efficiency. We wish her a speedy restoration to health. Mr. MacFarlane, who has taken a keen interest in the hospital since its commencement, and has

Mr. MacFarlane, who has taken a keen interest in the hospital since its commencement, and has given valuable assistance in the planning and lay-out of Kingsent, has retired from the Public Works Department. I would like to thank him for his many helpful and practical suggestions.

There is a shortage of housing accommodation for married staff, and as our single members are called up for military service the housing shortage has become more acute, making the replacement of staff difficult.

The patients have been fully occupied with constructional work on the farm, around the villas, and the Nurses' Home, in gardening, in the laundry, and in the sewing-room.

The weekly occupational classes conducted by Mrs. Waugh for the women, and the Rev. Jasper Calder during the winter for the men, have been well attended. The patients look forward to these, and there has been a marked improvement in the mental conditions and conduct of those attending.

The weekly clinic is held at the Auckland Public Hospital, where 132 new cases were treated, while there were 445 attendances. New cases were referred by the Pensions, 93; medical practitioners, 22; hospital, 10; Army, 3; spontaneous 3; other mental hospitals, 1.

TOKANUI MENTAL HOSPITAL.

Dr. Tothill reports :-

The total number of cases under care during the year ended 31st December, 1940, was 851, including 38 voluntary boarders. Admissions numbered 360, of whom 96 were committed patients, 21 voluntary boarders, and 43 transferred from other institutions. The discharges were 38 patients under certificate, 16 voluntary boarders, and 8 transferred. Deaths totalled 30, senile decay and heart-disease being the principal causes. At the end of the year 738 patients, including 59 on probation and 16 voluntary boarders, remained on the registers.

Continued progress has been made in effecting improvements throughout the hospital.

A new male villa was completed and occupied. Modern sanitary and washing facilities have been installed in Wards F. 3, A, and C, and a veranda built on to the male staff quarters. Extensive interior and exterior painting has been carried out. The internal roading is being improved, and repairs to the electrical system are in progress. The switchboard of our local telephone was burnt out and has been replaced. This system is not very efficient, and an automatic exchange would give better service.

Erection of a new laundry is under consideration. With the increase of patients this has become an urgent necessity. A modern bakehouse and butcher's shop are also badly needed. Occupational therapy has been actively pursued. Practically all able-bodied male patients are engaged in work on the farm, in the gardens, and wards. Shortage of female staff has limited our efforts on the female side, and I would welcome the appointment of a trained occupation officer to place this work on a sound basis. The slaughterhouse, boiling-down works, and skin-room are in operation.

The power-spraying plant for the orchard has been of great benefit. The carpenter's shop was provided with a circular band-saw, and the plumber with guillotine shears.

Difficulty in procuring nurses has necessitated the working of overtime. Thirteen of our male staff are on active military service. Our best wishes go out to them, and we wish them a safe and speedy return. Dr. Couston is overseas with the New Zealand Medical Corps, and his place has been filled by Dr. Calvert. Mr. Howie, our Head Attendant, was promoted to Porirua, and Miss McRae to Matron, B Class, at Seacliff. They had both given much valuable service to this hospital. Several members of our staff and most of their wives are actively engaged in Red Cross work, and a very successful sports carnival was held in the hospital grounds in aid of the Patriotic Fund.

PORTRUA MENTAL HOSPITAL.

Dr. HART reports :--

The total number of cases under case during the year was 2,051; of these, 1,820 were the subjects of a reception order, 224 were voluntary boarders, and 7 were remanded for observation.

Admissions numbered 442 —under certification 313, as voluntary boarders 122, and on remand 7. During the year 233 persons (129 committed patients and 101 boarders) were discharged.

Deaths numbered 121, and 120 transfers were made to other mental hospitals.

The usual psychiatric work has been continued outside the hospital, such as the supervision of the psychiatric wards at the Wellington Public Hospital and the out-patients' clinic at the Wellington and Pahnerston North Hospitals. The number of separate cases dealt with in this work was 415, of which 238 were in-patients at the Wellington Public Hospital, 104 at the Wellington Hospital Outpatients' Clinic, and 73 at the Palmerston North Hospital Clinic.

A series of cases was treated by cardiazol during the year and the result indicates that convulsive therapy is of very real benefit in certain cases of mental disorder.

Specialized occupational work, such as weaving, spinning, basket-work, and various handcrafts, has been extended during the year. Apart from the simpler type of work undertaken in the wards, the old artisans' block has been reconstructed as a centre for female patients, whilst the old engineers' block, as portions become available, is being used as a centre for male patients. As well as the therapeutic benefits obtained, much of the work is of economic value, and the occupational therapy account is financially healthy.

New bakery and butcher-shop block were brought into use during the year, and the cool-storage facilities of the latter has provided a very desirable amenity.

The installation of the new sewage system is incomplete, and although the new boiler-house engineering block has been completed some time, war factors have delayed the installation of hot water and steam reticulation, so that it will be some months before this unit can be brought into full use. The reorganization and re-equipping of the various hospital kitchens now remains the most urgent of the reconstruction problems.

The artisan staff has been fally occupied during the year in minor repairs and general maintenancework, whilst the work on the farm, orchard, flower and vegetable gardens has continued as formerly.

There has been a watural shortage of nursing staff during the year, and many of the male staff have gone with the Forces overseas. In their places temporary officers have been employed who are at present not liable for military service.

I regret to have to report the death of Mr. Quill, who retired after forty years' service and died suddenly some weeks after his retirement. For many years Mr. Quill was Head Attendant at this hospital, and he will be much missed by fellow-members of the staff and his many friends in the district.

Dr. WILLIAMS reports :-

NELSON MENTAL HOSPITAL.

The number of persons under care during this period was 924, of whom 896 had been admitted under reception orders and 23 as voluntary boarders.

The admissions numbered 95, including 14 voluntary boarders. The number of persons discharged was 34, including 13 voluntary boarders, and 40 patients were transferred to other institutions. There were 45 deaths.

Of the patients under care, 523 suffered mental disorder and 373 mental defect. Of the latter, 196, comprising the younger ones, were situate at Nelson; 177 adult defectives were at Ngawhata.

As was to be expected, the building and other operations have been considerably interfered with; and male villas, for example, which would normally have been occupied months ago, are not yet completed because of military requirements rendering necessary the shifting hither and thither of many of the workmen cogaged. The war has touched us in other ways, too, though comparatively lightly. A number of the male staff, whose places have been filled by temporary officers, have departed for service overseas. We hope for their safe return.

Shortage of female staff has been and is very marked, and rendered the more acute by the absorption of young women into industries directly concerned with, or stimulated by, war activities. Very much larger wages may be earned in some of these industries, so until conditions become normal again shortage must unfortunately persist.

Maintenance-work has been kept at a reasonably high level. The swimming-baths have been relined and repaired generally; tar-scaling has been continued, and concreting about many of the villas completed. Two female villas have been painted, and much other painting-work carried out by the working party regularly engaged in this.

A sewing-room and two rooms for Occupational Therapy have been made by the conversion of staff quarters in some of the female villas. Unfortunately the extreme staff shortage has prevented much expansion in this important form of treatment.

It now appears that some replacement of buildings at Nelson may be possible in the coming year. The need is really very argent. There are other matters which need attention, too a new telephone system and increased medical staffing are two 1 have in mind – but these can more readily be held over.

Following the need for greater production, farm activities and resources have been developed a good deal. Eighteen acres of gorse land in Poorman's Valley was cleared, and ploughed. One and a half acres was sown in early potatoes, and the balance in rape and turnips for fattening of lambs and for winter feed. Nearly 6 acres of potatoes have been sown on other parts, and with excellent results.

Approximately 24 acres of new pasture has been sown down, and one paddock of old pasture treated, and sown with clover, rye, and cocksfoot.

Comparative experiments in top-dressing pastures with basic slag, super, and potash, and with lime have been satisfactory, but have shown that the need for lime is much greater than that for manure.

Five Ronney rams were secured this year from a noted local breeder, in order that the quality of the flock might be further improved, and it is intended to do likewise next year.

Sows have been increased to capacity, but the demand for weaners has been greater than the supply. The season for the dairy herd, too, has been very favourable, so that production here also has shown a marked increase.

HORITIKA MENTAL HOSPITAL.

Dr. Childs reports :

At the commencement of the year the patients on the register numbered 532. The admissions proper were 21, while 13 andes and 9 females were received on transfer.

The discharges numbered 14, transfers to other institutions 12, and deaths 20.

The total number under treatment was 575, and the number remaining on the register at the end of the year 529.

There were 6 voluntary boarders on the register at the beginning of the year, 4 were admitted during the year, and 6 discharged.

The general health of the patients has been uniformly good. Occupational therapy has been carried on during the year, but, owing to the lack of a trained instructor and shortage of staff, has been interrupted occasionally.

bringatau has been completely recovated, and is now a pleasant villa, while the electrical system of the whole institution has been overhauled, and renewed where necessary, both externally and internally. Works in progress at present are the erection of a Nurses' Home, the installation of an intercommunicating telephone system, the installation of new pumping-equipment for the water-supply, and a new butcher's shop. These are all very necessary, and will add considerably to the efficiency and welfare of the hospital. Tenders for the additions to the bundry are at present being called.

The usual routine of farming, draining, and gardening has continued, 5 acres of bad being drained, cleared, and left fallow, while 7 acres of last year's fallow land has been sown down in grass. In addition, a fairly large programme of draining and roading has been carried out.

The painting gang has been fully occupied, and the usual maintenance-work carried out. A Works Overseer was appointed during the year.

A monthly clinic has been held at the Grey River Hospital, and the Westland Hospital visited when required.

CHRISTCHURCH MENTAL HOSPITAG.

DR. BELLRINGER reports :-

The number of cases under care during the year was 1,776 (974 males, 802 females). The admissions numbered 300-- under certification, 107 males, 129 females; by transfer, 9 males, 4 females; as voluntary boarders, 26 males, 25 females; and, in addition, 3 males and 6 females were admitted on remand.

During the year 109 patients (62 males, 47 females) and 52 voluntary boarders (26 males, 26 females) were discharged. There were 92 deaths (43 males, 49 females) and transfers to other hospitals numbered 32 (20 males, 12 females). At the end of the year the total on probation was 194.

Considerable use continues to be made of the alternative method of committal provided by section 8 of the Mental Defectives Act, and no less than 80 patients were admitted in this manner. This constitutes 37 per cent, of our admissions, excluding minors and voluntary boarders.

This constitutes 37 per cent. of our admissions, excluding minors and voluntary boarders. The clinic at the Christchurch Hospital has been held weekly, and the monthly clinic at the Timaru Hospital has been continued. These psychiatric out-patient activities have been extensive, the number of separate cases seen being 291 (including 25 at Timaru). The total number of consultations was 904, and 52 cases were investigated and reported on for the Child Welfare Department.

The health of the patients has been satisfactory, the main causes of death being senile decay and cardiac disease, mainly senile in basis. Various special therapies have been employed in addition to the usual medical treatment, and frequent use has been made of the specialized clinics available at the Christehureh Public Hospital.

Cardiazol treatment for schizophrenics has been continued. It is impossible to dogmatize on the ultimate benefits of this treatment, but our results are encouraging. Seven patients received treatment during the year—2 have made complete recoveries and 2 have noticeably improved. None of the 5 patients who received cardiazol treatment last year and were discharged have returned, and reports indicate that each is doing well. Altogether 15 patients have received cardiazol treatment since its inception in 1939.

Occupational work is being steadily developed, but there still remains much to be done. The work covers a wide range of attractive crafts and the proceeds from the stall on Anniversary Day amounted to $\pounds 17$. The usual exhibit at the Winter Show was made, and through the generosity of Hay's Ltd. the window displays have been continued.

At Templeton 261 children are receiving useful training in such varied places as the laundry, sewing-room, kitchens, villas, farm, flower and vegetable gardens, bootmaker and carpenter's rooms. The vocational block continues its useful activities, and a fairly satisfactory system is in operation by which every boy takes his turn for instruction.

The health of the children has been good.

The usual recreation has been provided in the way of weekly pictures, dances, bowls, cricket, basket-ball, folk-dancing, concerts, &c. In addition, large parties have attended (free of charge) numerous sporting fixtures, the shows, and picture-theatres in the city. Seventy-six patients sport enjoyable holidays at the New Brighton senside cottage. I desire to thank the many organizations, firms, and individuals who have so generously provided these entertainments.

During the year considerable maintenance-work has been carried out. The new workshops were taken over, machinery installed, and now, with the exception of one machine, the workshops have been completed. In response to the appeal for increased production, extensive alterations have been made to the piggeries at Sunnyside, and new pig-styes were crected at Templeton, where the number of pigs has been doubled. A modern ironing-machine was installed in the Sunnyside laundry. The erection of a new villa at Jenkin's Farm was commenced, and building has progressed rapidly. A new vegetable garden has been established at Sunnyside, a water supply installed, and a concrete implement-shed erected. The farm has had a satisfactory year.

Early in February, the Medical Superintendent, Dr. A. C. McKillop, was appointed O.C., 1st N.Z. General Hospital. Nine members of the staff also went on military leave, bringing the total on service overseas to seventeen. We wish them all good luck and a speedy return.

During the year Matron M. J. Martin, M.B.E., retired on superannuation after thirty-one years of valuable service.

To the District Inspector, the Official Visitors, and the visiting elergy 1 tender thanks for regular visits and attention to the patients' needs.

I desire to record my thanks to the staff for their work during the period T have been privileged to be in charge of this Hospital.

DR. BROWN reports :---

At the beginning of the year there were 1,035 patients on the register. During the year 149 patients were admitted, 68 were discharged, and 6 were transferred to other hospitals. There were 90 voluntary boarders under care, of whom 41 remain. The total death-rate was low. Deaths numbered 58, the majority of them being due to senile decay.

The necessary repairs and renovations were carried out by the artisan and engineering staffs. As 1 have emphasized before, the slipping ground on which the hospital stands and the old buildings make this work heavy and costly. The completion of the kitchen in F. 2 villa at Waitati gives each ward on the female side there its own kitchen, and there has been a very obvious improvement in the meals on that account. The Public Works Department are installing pumping-machinery at the Evansdale Creek to augment the water-supply during dry periods. The completion of this should remove a recurring source of worry and inconvenience.

The farm and garden have had a successful year, and the patients have had an abundant supply of fresh vegetables at all times of the year.

Further experience in the treatment of schizophrenia with insulin has shown that it has much to recommend it. In a batch of picked cases-that is to say, cases which the medical staff considered were suitable for this type of treatment 7 have been discharged, and the remaining patient has shown improvement. I would emphasize again that not every case of schizophrenia will respond to this treatment. I do so advisedly, for many relatives entertain false hopes of its success, and its failure is a sad disappointment to them. As time goes on one is beginning to get some idea of the permanency or otherwise of our results. This treatment has been used here for about two and a half years. During that period only two of the cases discharged have had to return to the hospital, and these two were patients about whom we were very doubtful but whom we allowed home on probation to the care of their people. Wherever possible the case is followed up after discharge, and a surprising number of these patients write to tell us how they are faring. In last year's report I spoke of the first of these cases whom we discharged after he had been in stupor for five years before treatment. His follow-up is most interesting. For a period he was only able to perform unskilled work, but now he has been able to resume his former highly-skilled work as a technical draughtsman.

A number of schizophrenics, chiefly female patients, have been given convulsive treatment with cardiazol, with good but not such spectacular results as insulin. I have not yet the material with which to make comparisons between the two methods of treatment.

I would again express my thanks to Dr. Thomson, of the Dunedin Public Hospital, and to various members of the Otago Medical School for their help in scientific investigations of these schizophrenic patients, which are beyond the facilities of this hospital. Without their co-operation and assistance it would be very difficult to carry out insulin treatment.

Occupational therapy has been carried out on a scale which I hope to see greatly increased shortly. I am grateful to you for the opportunity I had to see the occupational units in Auckland Mental Hospital. As you are aware two nurses and an attendant have been seconded there for training, and a considerable extension of this form of treatment should be possible on their return.

I continue to visit Dunedin Public Hospital twice weekly in my capacity as honorary physician in charge of the mental wards. An increased number of cases were seen at my monthly clinic in Oamaru Public Hospital. My Deputy Superintendent, Dr. Hay, visits Invercargill Public Hospital once a month. On his visits there he has examined and furnished reports on 55 inmates of the Borstal Institution.

It is of interest to record that our oldest patient is now, so far as our records show, one hundred years of age. He is very hale and able, when he runs short of tobacco, to walk from Simla Ward to my office to demand a further supply. I need hardly say that this is never refused.

The majority of the younger attendants are on leave of absence with the Forces, and I wish them a speedy return.

MENTAL NURSES.

In November the usual examination was held for the registration of mental nurses, when the following passed :--

Passed top for Dominion : Miss M. J. Middleton (Nelson).

Auckland : Attendants A. Dracevich, M. T. B. Harris, R. H. Taylor. Nurses A. C. Kingdon, S. M. Moore, A. O'Brien, G. E. Vernou.
Papakura : Attendant - E. McSweeney. Nurses - A. R. Hawke, M. J. Hubbers, R. McNaught,

N. Thompson*, I. G. Wigglesworth*, I. Willshaw.

Te Awamutu: Attendant E. F. Evans. Nurses M. H. Anderson, E. K. Graham, E. M. Frogatt, M. J. Hodson, M. M. Phillips. Porirua: Attendants A. E. Mexted, W. C. K. Parker, F. M. Wilson. Nurses-A. Adank,

G. R. Davies, K. A. Hill, N. H. Pryke.

Nelson : Attendant-11. 11. A. Holland. Nurses G. F. M. Andrews, F. Cobeldick, M. J. Middleton*, B. I. Robb, L. M. Rowlings.

Hokitika: Nurse H. M. Coombes.

Christehurch : Attendants -E. Beattie, J. S. Burford, J. E. Hartland, A. L. McDrury, E. K. Newton. Nurses M. B. Machirus, E. C. P. Smith, L. M. Urquhart. *Templeton Farm*: Institution Officers (Male) N. L. Milliken, J. H. Wisker. Institution

Officers (Female) J. L. Guy, F. L. P. Crawford, A. Quinn. Seacliff: Attendant W. L. Chisholm.* Nurses E. M. Anderson, G. Booker, E. M. Butler,

M. Cleghorn, L. B. Garbutt, B. I. Key*, E. I. Lee, E. M. Mathieson, G. M. McIntosh*, H. M. McLean, K. M. McVie, M. M. Smith, A. J. Townsend, E. L. Ward.

* Passed with distinction.
