

PLAN OF CAMP.

Scale, 1 inch = 90 ft., roughly

INCINERATOR.

The incinerator is used for burning all garbage, &c., in camps. It may be constructed out of any material.

Four draught-holes are provided, one on each side so as to suit wind from any direction.

The walls may be made 1 ft. thick at the bottom, tapering to 6 in. at the top.

The top of the incinerator should be splayed inwards, so as to cause a better draught.

Tins, when burnt, should be removed and buried.
