R E PORT.

The Inspector-General of Hospitals and Chief Health Officer to the Hon. the Minister of Public Health, Hospitals, and Charitable Aid.

I HAVE the honour to lay before you the annual report of the Department for the year 1911-12.

PUBLIC HEALTH.

1. The birth-rate of the Dominion for 1911 was 25.97 per 1,000—the lowest recorded since 1902 (25.89). But for the low birth-rate recorded in Victoria for the year 1911 (24.84), New Zealand would have had the unenviable distinction of the lowest birth-rate in Australasia.

The death-rate for 1911 was 9:39—slightly lower than that of the previous year (9.71). The lowest death-rate recorded in New Zealand was that for 1896 (9.10).

The infantile death-rate—*i.e.*, the total number of deaths under one year per 1,000 births—was 56.31, the lowest infantile-mortality rate hitherto recorded in the Dominion.

The following table shows during the last ten years that there has been a noticeable decline in this rate in our four chief cities :---

	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.
The Dominion	82.89		1 .		62.10	-		61.60		56.31
Auckland and suburban boroughs	140.74	121.48	70.12	91.52	85.80	97.19	81.87	61.85	79.02	63 ·02
Wellington and suburban boroughs	130.20	92.76	95.33	96.21	71.88	117.80	81.67	84.21	84.59	73.36
Christchurch and suburban boroughs	117.55	100.52	102.96	88.99	74.37	126.16	67.82	62.78	69.40	62.90
Dunedin and suburban boroughs	89.07	62.30	93.02	67.13	72.60	95.36	74.54	48.52	79.08	43.42
				1	ļ.,		ł	1		

Number of Infantile Deaths per 1,000 Births, Years 1902-11.

Tuberculosis.

2. In 1911, 738 persons died from some form or other of tubercular disease—the mortality-rate being 7.27 per 10,000, the lowest hitherto recorded. Of these 738 deaths, 536 were due to phthisis, the mortality-rate for the latter being 5.28 per 10,000. The decrease in this mortality-rate, which was commented on in last year's report, has therefore been maintained.

Though this is eminently satisfactory, it is to be hoped that during the ensuing year Hospital Boards and other public and private authorities will initiate a more rigorous campaign against this disease.

Three of the larger Hospital Boards have started anti-tuberculosis dispensaries with a view to catching and treating the early case of consumption, as well as arranging for the treatment of consumptive patients, in a more systematic manner than has been the case in the past. It is the intention of the Department to call at an early date a conference of medical practitioners who have made a special study of the control and treatment of consumption. By this means it may be possible to reopen the campaign against this disease with renewed vigour, and with all the armamentarium considered necessary by recent experience and research.

Cancer.

3. Those who may care to peruse the statistics attached to this report will note with concern the gradual increase in the mortality-rate from this disease, which was the cause last year of no less than 809 deaths, or a mortality-rate of 7.97—the highest hitherto recorded in New Zealand. At one time it was thought that the increase was due to more accurate diagnosis on the part of the profession, but no longer can this solace be allowed. The causes of cancer and the reasons for its increase are not known, and we can therefore only wait as patiently as we can the reports of the Cancer Research Commission.

Infectious Diseases.

4. 4,878 cases of infectious disease were notified last year, as against 4,153 in 1910. Chief of these were—(a) Scarlet fever, 2,362 cases with only 9 deaths; (b) diphtheria, 868 cases; (c) enteric fever, 792 cases with 67 deaths.

The District Health Officers' remarks as to the incidence of these diseases are contained in an appendix to this report.

Special attention may, however, be directed to the remarks of Drs. Makgill and Chesson with regard to the part that the Maori plays in the spread of typhoid fever. The epidemics at Waiapu, Ahipara, Te Puke, Ripia, Kawhia, and other places originated in Native settlements, and the epidemic at Gisborne was largely due to the same source. It is significant that of the 792 notifications, only 89 were from the South Island.

The District Nurses have undoubtedly been responsible for discovering many cases which would otherwise have been unnotified, especially in the Maori settlements mentioned above, and in this connection the following extract from a letter from Mr. Jones, Judge of the Native Land Court at Gisborne, may be read with some interest :—

"Many Natives have died, mostly, I think, from the neglect of proper treatment in the outset; and here I would like, if I might be permitted, to say a word of commendation of those brave and noble women sent out by the Department to assist in nursing the Natives. Apart from the ordinary risks of their profession, they take their lives in their hands, and put up with hardships and discomforts which only one who travels the same roads and crosses the same rivers can realize. And all this they do ungrudgingly and with a good moral effect on the Natives, whom they are continually schooling in the necessity and practice of sanitation. Were there more of these nurses available I think the course of the fever epidemic among the Natives would be checked if not stayed."

Plaque.

5. Attention is particularly directed to Dr. Makgill's interesting report on the outbreak of plague in Auckland during March, April, and May of last year. Fortunately the outbreak was limited to eight cases, one being a nurse who contracted the disease while on plague duty. To the credit of the nurses be it said that there was no difficulty in obtaining volunteers for this duty. Only two of the cases proved fatal. Though no cases have been reported since the 8th May, 1911, neither the Department nor the municipal authorities have relaxed any of the precautions considered necessary, though some of the surburban authorities have been somewhat apathetic in the matter. In connection with these the Department was particularly fortunate in having the assistance of the Mayor, Mr. C. J. Parr, who has ever been an enthusiast in sanitary matters, and who realizes that it is of little use to attempt to deal with a disease of this sort in a spasmodic and half-hearted manner. Auckland is a much cleaner city than it was this time last year.

Measles.

6. In addition to the infectious diseases notified, mention may be made of an epidemic of measles which was fairly general throughout the Dominion. The District Health Officer for Wellington (Dr. Chesson) refers to the carelessness displayed with regard to the precautions taken against this disease: "There is too great a tendency to look upon this as a childish complaint from which all children must suffer." Nevertheless measles was the cause of forty-one deaths in the Dominion last year.

Administrative.

7. Much of the time of the District Health Officers was taken up in arranging with Hospital Boards as to the assumption of their new duties as local authorities under the Public Health Act. Almost without exception, the necessary officers—principally Sanitary Inspectors—have been appointed by the Boards.

The new scheme is working well. The advantage of vesting the responsibility for the prevention as well as the treatment of disease in the hands of one local authority (the Hospital Board) in each district is quite apparent to those who have given any attention to the subject. In addition to their duties as Sanitary Inspectors, these officers are also Inspectors under the Sale of Food and Drugs Act, and their reports on the circumstances of those in receipt of charitable aid in their respective districts have in several instances been the means of preventing considerable abuse and imposition.

Water and Drainage Schemes.

8. It will be seen by the District Health Officers' reports that local authorities—urban and rural —throughout the country are showing considerable enterprise in these directions. A full list of the water and drainage schemes in existence, and those in contemplation, is set forth in an appendix to this report.

Laboratory Work.

9. Special attention may be called to the reports of Dr. Champtaloup and Mr. Hurley as to the amount of work done in the Dunedin and Wellington laboratories during the past year. The use that medical practitioners are now making of these officers' services is such that their time is severely taxed —so much so that in the early part of the year it was feared that Dr. Champtaloup's health would break down under the strain. Fortunately, however, the recent appointment by the North Canterbury Board of Dr. Patterson will to some extent relieve Dr. Champtaloup of the bacteriological work of that district. Dr. Champtaloup's suggestion that local demonstrations should be given to medical practitioners with regard to the more simple laboratory methods of diagnosis and treatment, and in the modern uses of bacterial vaccines, sera, tuberculins, &c., is one very well worthy of consideration.

Vaccination.

10. Early in this year a report was submitted to the effect that the vaccination law has practically become a dead-letter in the Dominion. Though the births in the Dominion were 26,354, only 1,078 vaccinations were performed—viz., children under one year, 415; children over one year, 627; adults, 36: total, 1,078, or 1.6 per cent. of the total births; whereas the exemption certificates numbered no less than 6,754. In view of our increasing trade with the East, this neglect on the part of parents to have their children vaccinated becomes all the more serious. The Dominion has had one or two warnings of the danger that it is incurring—e.g., the "Knight of the Garter" during the past year. It will not always be possible to discover smallpox patients before they land in the country.

Medical Inspection of School-children.

11. Though the need for initiating a scheme for the medical inspection of school-children has been talked of for some years, it is only quite recently that it has been possible to put such a scheme into being. For this purpose Drs. Cawkwell, Gunn, and Patterson have been appointed, and will shortly take up their new duties. There is little doubt that their investigations and reports will show the need for making further appointments in this important branch of public-health work. In the meantime, however, these officers will cover as much ground as is possible.

Sale of Food and Drugs Act.

12. During the year fifty-one prosecutions were made, and forty-nine convictions recorded. When the regulations that have been compiled under this Act have been gazetted it will be possible to enforce them with the vigour that is undoubtedly needed, and this will be simplified by the fact that the Department has now in each hospital district an officer who is responsible (*inter alia*) for the due enforcement of this Act.

HOSPITALS AND CHARITABLE AID.

13. Though the financial year ends on the 31st March, it is unusual for Hospital secretaries to furnish the Department with any of their returns until June; indeed, some returns do not reach the Department until September, and even then have often to be referred for further information. Now, Parliament usually meets at the end of June, and, by statute, the report of the Department should be laid on the table of the House in July. It is difficult therefore to furnish the report by the statutory time, but still more difficult is it to make more than a passing comment on the information supplied.

To draw proper deductions from hospital statistics they must be studied and digested at leisure, and not under pressure of a report to be submitted on data but recently to hand—data, by the way, that are often supplied by underpaid officials, as is the case with most of our hospital secretaries.

Though the report shows the receipts and expenditure of hospital authorities for the last year, little attempt has been made to criticize the expenditure under the various items, it being considered wiser to defer such criticism until the returns can be further studied.

Receipts.

14. The total receipts for the past year on account of hospitals, charitable aid, and public health was $\pounds 556,108$ —an increase of $\pounds 61,123$ over the previous year, the receipts for the past four years being— \pounds

		•••	••	••	• •	••.	••	
	1911 - 12	• •	• •	• •	••	••	• •	64, 138

15. As compared with last year there has been a decrease of $\pounds 3,777$ in voluntary contributions. Prior to 1885, when the hospitals were maintained by voluntary contributions and Government subsidy, one-ninth of our total expenditure was met by voluntary contributions; to-day this proportion has fallen to one-fifteenth.

16. There has been a gradual increase in the payments by persons relieved, viz.,--

				Payments by Hospital Patients.	Payments by Inmates of Charitable Institutions.	Total.
				£	£	£
1908 - 9		••	••	34,414	13,363	47,777
190910				42,714	14,028	56,742
1910-11			••	44,625	17,290	61,983*
1911-12	• •	••	• •	47,338	16,698	64,138*

* Includes also district nursing fees.

It will be seen by the above returns that one-sixth of last year's receipts was derived from payments of persons relieved and by voluntary contributions. The general increase in payments by patients in hospitals under the control of Boards may be noted with satisfaction.

Expenditure.

17. The total expenditure by Hospital and Charitable Aid Boards was £445,121, viz.,-

							1911–12. £	1910–11. £	
	Hospital maintenand	se					213,318	187,357

	Other expenditure	•••			÷ .		251	478	
	1	-	<i>,</i>		-				
							£22,090	$\pounds 11,422$	

There was also expended by the Department on other means of medical and nursing relief a sum of $\pounds 4,177$, viz.,—

(1.) Subsidies to medical men in backblocks	••	 1,359
(2.) Medical and nursing attendance on Maoris		 2.818

Apart, therefore, from the expenditure by private charitable organizations, the total expenditure by the Boards and the Department on relief of the sick and needy was £486,822.

Hospital Expenditure.

18. The total expenditure on account of hospitals for the last four years was,---

						£
1908–9		• •	•••		• •	 247, 123
1909 - 10	••	••		• •	• •	 262,241
1910-11	••	••		• •	••	 287,803
1911 - 12	••	••		••	••	 329,513

Further examination shows that the moneys that have been expended on hospitals during the four years may be divided as follows :---

			Maintenance.	Administration.	Capital.	Miscellaneous.	Total.
			£	£	£	£	£
1908 - 9	••		175,098	9,146	57,935	4,944	247, 123
1909 - 10			187,922	10,406	59,213	4,699	262,241
1910-11			199,573	11,586	70,814	5,830	287,803
1911 - 12	••		225,796	13,255	84,798	5,663	329,513

By "capital expenditure" is meant the sum devoted to new hospitals and extension of existing ones.

			1908–9.	1909–10.	1910–11.	1911–12.			
Number of institutions— General hospitals Special hospitals Number of beds available- General hospitals	··· ··	••	53 6 $2,502$	$\begin{array}{c} 56\\11\\2,689\end{array}$	$57\\14\\2,863$	$60 \\ 13 \\ 3,057$			
Special hospitals	••	•••	110	278	359	338			

During the past year considerable extensions have been effected at the following hospitals: Wellington, Greytown, Whangarei, Christchurch, Dunedin, Wanganui, Hamilton, Waipukurau, Auckland; and a new cottage hospital will shortly be opened at Tapanui. The Cook and Taranaki Boards have decided to erect new hospitals, the former having accepted a tender approximating £46,000.

A special report on the probable expenditure on new hospitals during the next five years is attached as an appendix.

Hospital Maintenance Expenditure.

20. The gross cost of hospital "maintenance"—including special hospitals—last year was $\pounds 225,796$, as against $\pounds 199,573$ the previous year. For the increase in the expenditure on maintenance may be shown that there were 1,369 more patients under treatment in our hospitals, and an increase of 53 in the number of patients under daily treatment, as compared to the previous year.

		Patien	ts under Treat	nent.	Average	r Daily	
		General Hospitals.	Special Hospitals.	Total.	General Hospitals.	Special Hospitals	Total.
1908–9		 19,653	1,042	20,695	1,566	77	1,643
190910	••	 21,108	1,420	22,528	1,709	138	1,847
1910-11	• •	 23,584	• 1,607	25,191	1,839	186	2,025
1911 - 12	• •	 24,681	1,879	26.560	1,900	178	2.078

General Hospitals.—The expenditure on "maintenance" of general hospitals was $\pounds 203,010$, or, in other words, $\pounds 106.3$ per occupied bed, similar expenditure for the previous year being $\pounds 178,715$ and $\pounds 97$ respectively—an increase of $\pounds 9$ in the cost per bed.

			Provisions.	Surgery and Dispensary.	Domestic and Establishment.	Salaries and Wages.	Total Maintenance.
1908-9 ·			$\hat{\mathbf{t}}$ 27.1	£ 10·8	£ 26·2	£ 42·9	£ 107.0
1909-10	••		23.7	9.8	25.9	40.9	101-0
1910–11		•••	22.8	8.7	26.7	38.8	97.0
1911-12	••	• •	24.2	10.3	29.5	42.3	106.3

21. Surgery and Dispensary.—A further reduction may well be looked for in this item; but it can only be brought about by combined action on the part of Boards with regard to the purchase of drugs, dressings, &c., which was unanimously approved by the delegates attending the recent Hospitals Conference. Nevertheless some Boards are reluctant to give effect to the substance of the resolution. The decision of the Government to allow vaccines and sera to be imported duty-free should bring about a substantial reduction in the expenditure under this item.

Salaries and Wages.—There is little or no hope of a reduction under this item; on the contrary, a steady increase in expenditure must be anticipated. During the past year there has been a considerable increase in the domestic staff, which has increased from 437 to 532. On the other hand, the proportion of nurses to occupied beds has slightly decreased, viz. :—

9				Nurses.	Occupied Beds.	Proportion of Nurses to Beds occupied.
1908-9				621	1,566	$1 - 2 \cdot 5$
1909-10		••	• •	662	1,709	$1 - 2 \cdot 6$
1910-11	••			736	1,839	1-2.3
1911 - 12	••			777	1,900	1-2.5

8

Fuel and Light.—Without doubt, in our larger hospitals much expenditure might be saved under this item. Many of our systems of lighting and heating are duplicated and generally faulty and wasteful.

Administration.—The relative cost of administration to expenditure, generally speaking, compares very favourably with that of local authorities. The following is the percentage of administration to maintenance expenditure: 1908-9, 4.9; 1909-10, 5.3; 1910-11, 5.4; 1911-12, 5.8.

	-				Indoor Relief.	Outdoor Relief.	Total.
· .		s	-		£	£	£
1908-9	••				68,012	37,537	105,549
1909 - 10	••				64,335	38,988	103,323
1910 - 11	• •			• • •	62,848	33,051	95,899
1911 - 12					64.651	34,171	98,822

Charitable Aid Expenditure.

22. As compared with last year there is an increase of £2,923 in this expenditure.

Though this increase is a slight one, there is little doubt that charitable aid is costing the country more than it should. The larger Boards exercise some supervision over the manner in which charitable aid is dispensed, but in the country districts this supervision is by no means what it should be.

Public Health—£5,468.

23. This is practically the first year the cost of this new duty imposed on Hospital Boards has been made apparent. Taking all in all, the cost is very small, and is practically confined to the expenditure involved in the payment of the salaries and travelling-expenses of Sanitary Inspectors.

the expenditure involved in the payment of the salaries and travelling-expenses of Sanitary Inspectors. In some districts these officers' salaries are more than saved as a result of their reports on those in receipt of charitable aid. Many of these reports have shown the somewhat lavish manner in which poor-law relief has been administered in some districts, and the abuses that have been engendered by an indiscriminate doling-out of alms.

NURSES.

24. The names of 155 nurses were admitted to the register last year. Of these, 111 were traine in New Zealand hospitals; the remainder were registered on oversea certificates. At this rate there is little need to fear that the Dominion will be short of nurses, as was anticipated last year.

Many hospital authorities now stipulate that applicants for probationerships must sign on for four years. By this means it will be possible for nurses, after passing the State examination at the end of their year, to devote the fourth year to the study of some special part of their profession. For example, no nurse should be appointed to an administrative position in a hospital unless she has a certificate of having given special study to, or having passed an examination in, hospital economics. The fourth year could be very well devoted to the study of specialties.

The pay of nurses in our public hospitals has been considerably increased during the past two years, the salaries varying from £56 to £100 per annum—the latter sum being paid Sisters in one of our larger hospitals.

A summary of the reports of Medical Superintendents and Matrons on the eight-hours system for nurses is embodied in the Assistant Inspector's report.

It will be seen that the general opinion of those responsible is to the effect that the eight-hours system is for the good neither of patient nor nurse. With three changes of nurses each day, the sense of responsibility is undoubtedly lessened, so that the treatment ordered by the medical staff is not carried out as efficiently as where there are fewer nurses. Moreover, when anything goes wrong it is practically impossible to sheet responsibility home; and again, when a nurse sees so little of her patient she can scarcely understand the course of disease as fully as would be possible if her hours of responsibility were longer.

MIDWIVES.

25. The names of 74 midwives were added to the register last year, 55 having been trained in the Dominion. There is now some hope of meeting the needs of the Dominion in this particular branch of work, especially as during the ensuing year three additional training-schools for midwives may be provided.

The total number of midwives on the register is 1,097, of whom 415 are fully trained, and 682 untrained. On the 31st March, 1907, the number was 891, of which 102 were trained and 789 untrained. It will be seen that the number of untrained midwives is gradually decreasing through death and other causes, whilst the increase in the number of trained midwives more than compensates for this decrease. The following shows the number of trained midwives for the six years ended the 31st March, 1912:—

Year.							Number of Trained Midwives.
1907	••	••	••	••	••	••	102
1908	••	••	••	••		••	143
1909		• •			••	••	204
1910		••		••	••	••	276
1911		••	••		••		337
1912	••	••	••	••	• •	••	$\dots 415$

Thus, though the names of many untrained midwives disappear from the register each year, it will be possible to keep up the standard of one midwife to every 1,000 of the population. With the present low birth-rate this proportion should be sufficient.

9

In previous reports comment has been made as to the difficulty of obtaining midwives for our backblocks. Though Hospital Boards have not taken the fullest advantage of the Department's proposal----to give free training to women specially recommended by Boards as likely to make suitable midwives, provided those trained guarantee to practise for two years in any part of the hospital district which has recommended them-it is satisfactory to note that several of our St. Helens nurses are "going back," and undertaking work in those parts of the Dominion where their services are particularly needed.

Our St. Helens Hospitals continue to do good work, and the demands on these institutions are increasing every year. The actual cost to the State of these four maternity homes was £1,820, excluding capital expenditure.

District Nurses.

26. It is to be regretted that, despite the unanimous resolution of the recent Hospitals Conference, more Boards have not seen their way to appoint District Nurses. That they must effectively fill a gap in our hospital system is freely admitted. The Waikato Board has taken the matter up in earnest and appointed three District Nurses for work in its backblocks.

The Maori district nursing scheme bids fair to be a great success. So far eight nurses have been appointed.

It is with no little pride that attention is directed to the Assistant Inspector's report on the work of these nurses. In this field, as Nurse Purcell writes, something akin to a "missionary spirit' is needed to make the work a success. The drawbacks and difficulties of doing good work amongst the Natives must be very clear to all those who have interested themselves in the habits and idiosyncracies of the Maori.

General.

27. As the Department is constantly in receipt of inquiries from other lands as to the many details of our hospital system, a full account of our hospital service is set forth in another portion of this report.

Speaking generally, the system is working well, but its efficiency would be materially increased if Boards would but adopt a comprehensive system of outdoor medical treatment, whereby the poorest in the land would receive adequate relief in their own homes. A departure of this sort would undoubtedly involve the Boards in additional and possibly expensive responsibilities.

The present necessities of the Dominion, however, do not require a very elaborate system of outdoor medical treatment; nor would it be advisable at this juncture to put such a scheme into operation. Nevertheless, the Boards might very well consider the putting into operation of a subsidized medical service for the benefit of our settlers in the more remote country districts, and thus in some measure requite the settlers for the expense they are put to in maintaining a system in the benefits of which they can hardly participate to the same extent as the town-dweller.

It is undoubtedly the duty of either the Boards or the Government to ensure that even in the most remote parts of the Dominion a medical service is available which is not only within the means of the less well-to-do, but also that the service in question is reliable and efficient.

A subsidized medical service for the backblocks could be put into operation with little or no alteration in our hospital machinery, and if administered with discretion it would not prove a costly venture, provided all persons receiving its benefits were made to pay-as is now the case with patients admitted to our hospitals-according to their means.

H.—31.

THE PROBABLE CAPITAL EXPENDITURE ON HOSPITALS AND CHARITABLE INSTITUTIONS DURING THE NEXT FIVE YEARS.

During the past five years the capital expenditure—*i.e.*, the sum spent on new buildings connected with our hospitals and charitable institutions—amounted to £380,000.

The recent acceptance by the Cook Hospital Board of a tender amounting to no less a sum than £45,866 for the erection of a hospital and other buildings required for the accommodation of the sick and needy of that somewhat remote district renders necessary a statement as to the possible requirements (with regard to building and equipment) of other hospital and charitable institutions in the Dominion. By this means the taxpayer will be in a better position to know what calls are likely to be made on the public purse under these items during the next five years.

There is little doubt but that the taxpayer will be somewhat taken aback at the figures submitted. Nevertheless, a plain statement of the position is necessary in order that those responsible may not be taken unawares when the necessary calls are made, whether through the rates or the Consolidated Fund.

It may not be inopportune to remind those who so loudly declaim against an increase in hospital expenditure that, apart from the wave of humanitarianism that is now going over the world, and the increased cost of labour, there are other factors contributing to the development, and therefore an increase in the expenditure on institutions. Indeed, this may be called the "Institution age."

There is a tendency on the part of all classes of the community to take advantage of our hospitals, and this tendency is rapidly growing. There is no longer that repugnance, either on account of fear, ignorance, or pride, to enter a public hospital that was so noticeable a decade or so ago. We seldom hear nowadays of "butcher-shops" or "experiments"; nor, on the other hand, do we notice that independence or pride that prevented many a sick person from seeking relief in a public institution through fear of being considered by his neighbours as "on the rates."

It naturally follows that as a larger proportion of the public seek admission to our hospitals, there must be an increased demand not only for new institutions and extension of existing ones, but that those institutions should be made as efficient and comfortable as possible—comparable, indeed, as regards design and equipment with the best hospitals in older and richer lands. The staffing must also be of the best; and in this connection it is well to point out that the eight-hours system for nurses makes it necessary to erect nurses' homes, so that accommodation for nurses can be provided at the rate at least of one bed in the nursing-home for every 2.5 beds in the hospital connected therewith.

The recent addition to the Nurses' Home in Auckland cost £15,000.

The equipment and appliances considered necessary in a modern hospital are becoming more costly every year, and though there may be some saving in the drugs administered, this saving is more than counterbalanced by the expenses incidental to serum therapy and vaccines.

Again, a large section of the public are fully alive to the fact that where possible persons with certain diseases should be treated in special wards—if not in special hospitals. No longer is it considered prudent to treat the typhoid patient and the consumptive, the diphtheria case and the patient with incurable cancer, in the same wards. Far from it. Special wards or hospitals are needed for such cases, and the public will have them—though we must carefully guard against that hysteria which in the near future will make the erection of a hospital for certain diseases a very difficult matter unless on sites quite remote from population.

From a departmental point of view also there is need for increasing hospital accommodation. It is no exaggeration to say that a very large proportion of the diseases that are treated in our hospitals is almost entirely preventable, and that there are many ailments which, if treatment is sought sufficiently early, can be prevented from developing into chronic if not fatal diseases. This is especially the case with consumption and other forms of tuberculosis, and slight nervous ailments.

It is absurd to talk about a crusade against consumption—and, for that matter, against any other disease—unless we have immediately available sufficient beds for early cases. For early cases of consumption alone a number of additional beds are needed; in fact, it is of little use trying to prevent any form of disease if an efficient medical service is not immediately available for treating the sick.

The need for additional beds will be all the more apparent when the Native population has overcome its prejudices against seeking treatment in our institutions.

From the District Nurses' reports it is quite plain that there is a great deal of sickn ss—especially tuberculosis and typhoid fever—among the Maoris, and as regards these and other diseases the Department must adopt the same methods towards the Natives as it is empowered to use in the case of the pakeha, where, in the opinion of the District Health Officer, adequate attention cannot be given other than in one of our public hospitals.

H.---31:

NEW ZEALAND HOSPITALS ACT.

Part I.

Statutory.

1. For the purposes of the Hospitals and Charitable Institutions Act, 1909, New Zealand is divided into thirty-seven hospital districts.

Each hospital district is controlled by a Board, the representatives being elected by the electors of the various contributory authorities in the hospital district—*i.e.*, Borough Councils, Town Boards, County Councils, and Road Boards, or a combination thereof.

The representation on a Board is proportioned to the population and the value of the rateable property in the contributory district.

The representatives of a contributory district retire at every general election of the local authority of that district, and their places are filled by an election held at the same time as that general election. By this means the continuity of Boards is somewhat preserved, by securing the retirement of groups of members at different times—e.g., the borough elections are held every two years, in the month of April, and the County Council elections every three years, in November. The Chairman of the Board holds office for two years' certain tenure.

Subject to a modicum of Government control, a Board is responsible (a) For the local administration of public health; (b) for the management of hospitals; (c) for the administration of poor-law relief.

Revenue.

2. The revenue of Boards is derived from four principal sources — (a) Local rates; (b) Government subsidies; (c) payments by persons relieved; (d) voluntary contributions.

£

			~
		(1908–9	154,070
(a.) Per Government subsidies		1909-10	152,856
(a.) I et dovernment subsidies :		··	167,941
		$\lfloor 1911 - 12 \rfloor$	189,011
		(1908–9	116, 134
(b.) Per local rates		1909–10	129,012
) 1910–11	131,525
		1911-12	149,203
		1908-9	20,861
(c.) Per voluntary contributions .		1909–10	31,061
(c.) fer voluntary contributions .	• • • •	···] 1910–11	35,433
		(1911–12	31,656
		1908– 9	47,777
(d.) Per payments by persons relieved		J 1909–10	56,742
(a) a or payments by persons reneved	••	1910-11	61,983
		1911-12	64,138
· · · · · · · · · · · · · · · · · · ·			

In addition to the above, there are a few hospitals which are possessed of small endowments.

3. The rates are collected by a Board by means of levy on the local authority. The Hospital Board has no power to strike a rate, though the levy struck by the Board constitutes a debt payable by the corporation of the authority to the Board, and may be recovered in Court. If any local authority considers the levy excessive, it has the right to appeal to the Minister in charge of the Department, who may cause a commission to be set up to inquire into the circumstances. The opinion of the Minister is final.

4. Government subsidies are granted as follows :----

- (a.) Ten shillings for every pound of the value of all devises or bequests—the subsidy being limited to £500 in respect of the estate of a single testator.
- (b.) Twenty-four shillings for every pound of the value of all voluntary contributions, or gifts of money, land, or other property other than devises or bequests.
- (c.) For every pound levied by the Board from contributory local authorities—(1) £1 in respect of capital expenditure; (2) an amount determined in accordance with the subjoined table in respect of expenditure other than capital expenditure—*i.e.*, maintenance.

Rates of Subsidy for each Pound of Contributions levied from Contributory Local Authorities.

		Rate of	Levy per He	ad of the Po	pulation.	
Rateable Value per Head of the Populatio	n. Under 2	Under 2s. 6d. but not under 2s.	Under 3s. but not under 2s. 6d.	Under 3s. 6d. but not under 3s.	Under 4s. but not under 3s. 6d.	Not under 4s.
Under £100 ,, £150, but not under £100 ,, £200, ,, £150 ,, £250, ,, £200 ,, £300, ,, £250 ,, £350, ,, £300 ,, £400, ,, £350	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{cccccccccccccccccccccccccccccccccccc$	$\begin{array}{cccccccccccccccccccccccccccccccccccc$
Not under £450	16 3	16 0	15 9	15 3	$14 \ 3$	12 3

The object of this schedule of subsidies is to help the poorer districts, while at the same time penalizing extravagant administration. It will thus be seen that a poor district with a low rateable value per head gets a higher rate of subsidy than a rich district whose high rateable value also presupposes a less number of poor to be provided for; and if such rich district is extravagant in its expenditure, and has to levy at a high rate per head of its population, it receives a still lower subsidy. Every claim for subsidy must be accompanied by a statutory declaration, made by the Chair-

man of the Board, verifying a statement of all material particulars.

5. Payments by Persons relieved (i.e., by Hospital Patients) .-- The amount derived from this source and from voluntary contributions last year met one-sixth of our total hospital expenditure.

There is no uniform hospital maintenance fee, the amount being fixed by each Board, and varying from one to three guineas per week. A Board has power to make persons pay according to their means for relief granted them.

6. Voluntary Contributions.—Prior to 1884, hospitals in the country were supported by voluntary contributions and Government subsidies. Since these institutions have been largely supported by the rates voluntary contributions have somewhat fallen. In 1883 voluntary contributions met one-seventh of our total hospital expenditure; last year voluntary contributions met one-ninth of this expenditure.

Government Control.

7. The Hospitals and Charitable Institutions, Public Health, Nurses and Midwives Registration, and allied Acts are administered by the Department of Public Health under the direction of the Minister of Public Health, with the Inspector-General of Hospitals (who is also Chief Health Officer for the Dominion) as the chief executive officer. This officer is assisted by District Health Officers,

Assistant Inspectors, Sanitary Inspectors, &c. The powers exercised by the Department over the Boards relate chiefly to matters of finance and audit. A certain degree of Ministerial control is given in respect to medical and other appointments by Boards, the framing of by-laws and expenditure on new buildings, and in regard to the more vital questions affecting the public health.

Subsidies are not given for purposes disapproved by the Department—e.g., buildings not idered necessary. The Department has also power to withhold subsidies if Board neglect to considered necessary. provide institutions which the former considers necessary, the Department having the power in such respect to act in place of the Board.

All institutions in receipt of Government subsidy are open to inspection by the Inspector-General of Hospitals and his assistants. Hospital books are also open to the inspection of Government auditors.

8. Mental Hospitals are entirely under the control of the Mental Hospitals Department, and all expenditure on such hospitals is paid direct from the Consolidated Fund. The Department is under the control of the Minister of Public Health, the chief executive officer being the Inspector-General of Mental Hospitals. There are seven mental hospitals in the Dominion-six public and one A small charge is made to the friends of patients detained in these mental hospitals. The private. patients' friends are made to pay according to their means. The sum recovered from such fees only amounts to 32.61 per cent. of the total expenditure on these State-managed institutions.

PART II.

Executive.

9. So far as possible the Department acts in an advisory capacity, only exercising its prerogative where it is evident an abuse of the law is intended or has taken place.

Speaking generally, the Boards seem desirous of working with the Department, but are extremely jealous with regard to what they consider an invasion of their rights.

The Department on its part has ever recognized that local government—if efficient—is in the best interests of this country.

For the most part, the Boards have adhered to the policy outlined by the Department with regard to the establishment and management of their institutions.

10. In the larger hospital districts each Board is provided with-

- (a.) A Base Hospital.—This hospital is the centre of the Board's activities. The Board meetings are held in its immediate neighbourhood. It is thoroughly equipped in every department and provided with an adequate medical and nursing staff. The Medical Superintendent of the base hospital is in the position of supervisor of all the other institutions under the control of the Board, and makes periodical visits of inspection; and the Matron of the base hospital also exercises a similar supervision as regards her special department, and arranges for the staffing of the various institutions of the district with an adequate supply of trained nurses and probationers. Moreover, the base hospital is the training-school for nurses, and probationers are drafted therefrom for service in the various institutions, returning to the base hospital to complete their training. By this means it has been possible to make the best use of the clinical material for training purposes, and, what is of more importance, to limit the number of training-schools, many of the smaller hospitals not having sufficient beds for that purpose.
- (b.) An Infectious-diseases Hospital.—This is generally in the immediate neighbourhood of the base hospital, and is under the same medical and nursing administration. The smaller hospitals are also provided with isolation wards.
- (c.) Annexes or Wards for Consumptive Patients in Curable and Incurable Stages.—Most of our hospitals are provided with such annexes, where consumptive patients in the early stages can be treated pending admission to a sanatorium. These annexes or wards are also used for patients in the more advanced stages of the disease.
- (d.) A Consumptive Sanatorium.—Only three of our larger Boards are provided with these institutions, the smaller districts combining for their equipment and upkeep. To these institutions are sent cases in the early stages of consumption who have been treated in the hospital annexes referred to above. There is also a sanatorium, with sixty beds, under the entire control of the Department.
- (e.) Incipient Mental Wards.—It is hoped that each of our larger base hospitals will shortly be provided with wards for early mental cases in whom there is a prospect of cure, and, by this means, the patients saved the stigma attaching to persons who have been treated in duly recognized mental hospitals.
- (f.) An Old People's Home.—Most districts are provided with these institutions, the smaller districts combining with the larger for the purpose. Here are received the aged poor (of both sexes) of the district.
- (g.) Attached to the Old People's Home is a *Chronic Ward*.—In these wards are received all chronic and incurable indigent patients. Most of these institutions are provided with trained nurses, under the supervision of the Matron of the base hospital.
- (h.) A Maternity Ward.—The four chief towns of the Dominion are provided with a maternity hospital under the control of the Department—St. Helens Hospitals. It is hoped that in the course of the next few years all country hospitals will be provided with maternity wards.
- (i.) Secondary Hospitals.—These are situated in the smaller towns, and usually consist of some ten to twenty beds. Naturally, these hospitals are not as fully equipped as the base hospitals, being used more for cases of ordinary illness or emergency. For special work or major operations it is the desire of the Department and the Boards that patients needing such should be sent to the base hospital of the district, where they would have the advantages of the services—whether for consultation or operation of several medical men.
- (j.) A Cottage Hospital.—Usually of some two to six beds, with a room attached for maternity cases. The functions of these institutions should be more for first aid until the cases can with safety be transmitted to the secondary or base hospital.

11. The District Nurse is a most important adjunct to our hospital system. For the most part these nurses are sent to the more remote country districts—the backblocks—where their services as nurses and midwives are much sought. It is by means of the services of such officers that we hope to bring the backblocks more in touch with our hospital system, of which the district nurse is the outpost. It is the hope of the Department and the Boards that backblock settlers will provide cottages for these nurses, not only for them to live in, but with an extra room or so in which emergency cases can be treated until they can with safety be forwarded to the secondary or base hospital of the district, or which could be used for maternity cases.

There are also special nurses appointed for work among the Maoris. These nurses are paid by the Department, but are controlled by the Boards, who are better able to decide in which part of the hospital district they should be stationed.

12. In conjunction with the services of these nurses the Department is considering a subsidized medical service in the backblocks, with a view to encouraging a good stamp of medical practitioner to settle in the more remote districts.

Medical Staff.

13. No uniform system prevails with regard to the medical staffing of our institutions. In a country such as this, where the conditions in the various hospital districts differ so much as regards population, medical men available, and other factors, it is difficult to see how uniformity—though much to be desired—can yet be attained.

In the larger hospitals the usual practice is to appoint an honorary staff, composed of certain medical practitioners residing in the neighbourhood. Among these medical men are usually specialists in various branches of medicine and surgery. The honorary staff is elected by the Hospital Boards for a term varying from one to three years, the practice of Boards in this respect not being uniform. The Department exercises no control over such appointments.

The honorary staff is assisted by a Medical Superintendent, who is elected and paid by the Board, subject to the approval of the Minister of the Department. The duties of this officer are principally executive. In some hospitals he is subject to the control and direction of the honorary staff, as well as to that of the Board; but his position with regard to the former greatly depends upon the personality of the officer concerned. As a general rule, the tendency of an honorary staff is to leave the Medical Superintendent—who is generally a man of considerable professional experience a comparatively free hand with regard to the purely professional management of the hospital. The Medical Superintendent is assisted by junior medical officers, who are under his control. In our larger hospitals the average is one resident medical officer to about every fifty beds.

It is hoped that in the course of the ensuing year each base hospital will be provided with the services of a skilled bacteriologist, who, in addition to his ordinary duties, will be able to provide the medical men of his own and adjoining hospital districts with those vaccines and sera which now play so important a part in medical treatment.

14. In some of the provincial hospitals the medical service of the hospital is administered either by-

- (i.) A Medical Superintendent wholly paid by the Board, who attends to the requirements of the patients, with the assistance either of a paid junior or local medical practitioners who are called in when required, and who are paid by the Board for services actually rendered :
- (ii.) A medical officer who, in consideration of a certain sum paid by the Board, and the right to private practice, superintends the general management and medical service of the hospital, calling in such assistance as he may consider necessary—the medical practitioners assisting being paid for services rendered : or
- (iii.) A medical practitioner in private practice who, for a certain sum, attends the hospital regularly, calling in medical assistance when required.
- (iv.) In a few small hospitals the medical officer in charge, when in need of assistance, enlists the services of private practitioners, who give such in an honorary capacity.

Each of these systems has its drawbacks; but taking all in all, in hospitals of 100 beds and over, the honorary-staff system is undoubtedly the best. It is true that the medical practitioners elected by the Board are not always those who possess the confidence of their professional brethren, but on the whole it is comparatively rare that a bad appointment is made, though the tendency to favour certain applicants, irrespective of their professional worth, is sometimes to be noticed. Again, it is not unusual under this system to find that a medical officer who possesses the respect and esteem of his colleagues and patients, and who is loyal and energetic in the interests of the hospital, is viewed with suspicion by certain members of the Board, and when his time has expired his re-election is by no means secure.

The honorary-staff system has the great advantage of affording experience in the higher work of their profession to a relay of medical officers. The experience gained by them is thus of great advantage to that section of the public who do not seek medical relief in the public hospitals.

There is sometimes friction between the honorary staff and the Medical Superintendent, but this is comparatively rare, especially where the former recognize the abilities of the senior resident officer.

15. In the smaller hospitals a paid medical service appears to be the best. The districts surrounding the smaller hospitals are often not large enough to tempt a sufficient number of medical men to settle in the locality. Therefore, for the purposes of an honorary staff, the Board has not enough medical men to draw from. Moreover, in these small districts professional rivalry is often more acute than in the larger towns, and there is a tendency on the part of some medical men to make the hospital their battle-ground. There is no doubt that a medical officer who is wholly or partially paid by the Board is in an enviable position as regards the surgery of the district: if he is a good man he can practically command the whole of it, and this is not perhaps fair to the local practitioners whose professional services are not similarly subsidized.

It is also difficult for a Medical Superintendent appointed on these terms to successfully resist the tendency to hospital abuse. Unlike his *confrère* on the honorary staff of a large hospital, he cannot advance the plea that he only gives his services in an honorary capacity for the benefit of the poor. Under this system the Medical Superintendent is often adequately paid, and such being the case he can scarcely refuse to admit a well-to-do ratepayer who contends that he has a right to treatment in the hospital and to the services of the Medical Superintendent, provided he pays the customary fees for maintenance. A Medical Superintendent appointed under such circumstances is in a bad way to resist hospital abuse, unless loyally backed up by his Board.

. •

Again, the surgery of the district being practically in the hands of one man, those residents who do not make use of the local hospital, and who require surgical assistance, are rather at a disadvantage. They have either to pocket their pride and make use of an institution which they regard in the light of a charity, or possibly submit to a serious operation at the hands of a practitioner who has not the skill that can only be acquired by constant practice.

16. Nurses.—A system of State registration of nurses has been in force since 1901. There are now 1,184 nurses on the register. No nurse is appointed a Matron of a hospital unless she possesses the New Zealand State certificate, or what is considered its equivalent.

There are 249 trained nurses in our hospitals, and 528 probationers under training.

17. *Midwives.*—There are 1,097 midwives on the register, of whom 415 are qualified by training and examination. No person can now be admitted to the register unless in possession of a certificate of training and of having passed an examination approved by the Department.

At one time it was anticipated that there would be a shortage of midwives, but by means of increasing the training-schools from four to eight, and giving girls free training at our maternity homes on the condition that they practise their art for two years in the backblocks, we have every hope that the need for properly qualified women is gradually being met in most parts of the Dominion.

18. Sanitary Inspectors.—Each Hospital Board has on its staff one or more officers who are responsible to the Board and the Department, through the District Health Officer, for the local administration of the Public Health and the Sale of Food and Drugs Acts. Their services are also used as poor-law inspectors.

These officers are qualified by examination in public-health work. Unless the Department approves their qualifications they are not gazetted Inspectors under the Public Health Act.

19. Private Hospitals.—These are subject to departmental control. No person receives a license to conduct a private hospital unless (a) The buildings and premises are approved by the Department; (b) the manager is a duly registered nurse or midwife or medical practitioner. A register of patients must be kept, and this is subject to examination by the officers of the Department.

Charitable Aid.

20. Charitable aid is usually administered by a special committee of the Board. Each application is dealt with on its merits, the committee deciding whether the applicant shall receive indoor or outdoor relief.

Outdoor relief is usually granted in provisions only, the Boards supplying the necessaries from their own stores. In the country districts the Boards arrange with local storekeepers to supply persons holding tickets for relief with certain necessaries at stated amounts and prices. These tickets must be signed by the Secretary or a local member of the Board.

The latter system has been subjected to many abuses, but since Boards have instructed their sanitary inspectors to report on the circumstances of those in receipt of charitable aid, and inquire into the doling-out of stores, a great deal of abuse has been checked.

Under special circumstances Boards make an allowance for house-rent, also for fuel.

Children.

21. The Education Act places the control and inspection of orphanages and kindred institutions under the Education Department.

The institutional treatment of indigent children does not find favour in New Zealand. Where possible the Boards and the Education Department prefer to board out children with specially selected families, and, generally speaking, the system works well. Those boarded out by the Education Department are regularly visited by its officers.

Where possible all children received into institutions attend the local State school. This, of course, does not apply to children who have been "committed" to industrial schools.

Difficulties and Abuses.

22. The chief difficulties in the administration of the Act are-

(a.) The hospital districts are too small. Each district should be large enough to be self-contained -i.e., with sufficient rateable value to support the various institutions necessary: a fully equipped base hospital, a consumptive sanatorium, institutions for the aged poor, chronic incurable cases, &c. Some of the hospital districts are so small that they can scarcely support a hospital of twelve beds.

(b.) The Boards are too large. The Act ordains that a Board shall consist of not less than eight or more than twenty members. The latter number makes the Board unwieldy, and work is not so readily carried through as by a small Board. Though Boards have power to enlist the services of co-operative members who may be specialists in some of the problems with which a Board is confronted —persons who may not care for the rough-and-tumble of an election—there has been a distinct disinclination on the part of Boards to make such co-operative appointments.

(c.) Government subsidies: There is no doubt that the large Government subsidies given tend to abuse and extravagance on the part of Boards, and this is especially noticeable in the administration of poor-law relief. Of especially evil influence is the 24s. subsidy given on voluntary contributions. To obtain this extra 4s. from the Government there are some who exercise ingenuity that amounts to dishonesty. For example, a Board requires a new set of instruments, which for the sake of argument we will say would amount, at catalogue prices, to £100. The firm supplying the instruments charges the Board the full price, but the former returns £20 as a "donation." The Board thereupon claims 24s. subsidy on this donation. Thus the Board gets its instruments for £56. Transactions of this nature are going on every day, but unfortunately are very difficult to detect. Again, the 24s. subsidy often leads a Board into undertakings that it has not seriously contemplated. A body of well-intentioned persons decide that certain hospital extensions are necessary. A meeting is held; subscriptions pour in; the 24s. subsidy is claimed; but the subscribers attach such unreasonable stipulations to the handling of their subscriptions that the Boards are often embarrassed by their generosity. The sanatorium or ward, as the case may be, must be in a position that the subscribers consider proper; the question of efficient and economical administration is not their duty. In fact, speaking generally, Boards would at times be very much better off if they had erected the institutions out of their own funds—the rates and pound-for-pound subsidy allowed by the Government on capital expenditure. This abuse can now largely be checked by the Department withholding its approval of such expenditure.

It will be interesting to see what ingenuity will be displayed by those claiming subsidy under the graduated schedule. Of course, these claims are carefully checked by the Department, but they will have to be very closely watched, otherwise local officers will soon find a way of increasing these Government subsidies.

A careful audit is not only necessary with regard to matters of expenditure, but also as regards the data and statistics supplied by hospital authorities. The cost per bed is estimated by dividing the total expenditure by the average number of patients under daily treatment. Some Secretaries recognize that the larger the number of patients under daily treatment the lower the cost per bed. This tends to the "stuffing" of the patients register and to the increased stay (in days) of the patient.

The returns and statistics of a hospital need almost as careful supervision as its accounts, for many of these returns are so made as to be absolutely misleading to the ratepayers and the public generally.

REPORT ON NURSES REGISTRATION ACT. MIDWIVES, AND PRIVATE HOSPITALS.

By Miss H. MACLEAN, Assistant Inspector of Hospitals.

SIR .---

I have the honour to report concerning the administration of the Nurses Registration Act, 1901, the Midwives Act, 1904 (Consolidated Statute, 1908), and Part III of the Hospitals and Charitable Institutions Act, 1909.

THE NURSES REGISTRATION ACT.

During the year two examinations were held by the State. There were 124 candidates, of these 111 passed, and their names were placed on the register of trained nurses.

The receipts of fees for examination and registration were £167, the expenses in connection with the examination were £164 2s. 9d.

There has been little change in the manner of conducting the examinations or in the preparation of the nurses in the various hospital training-schools since my last report. The affiliated training in the district hospitals and the several dependent institutions, recommended by the Department, has been instituted by two more of the Hospital Boards-namely, the Waikato and the Wairarapa Boards.

Careful administration is needed by the superintendents of nursing to so allot the changes in duty from one institution to another that all probationers receive a fair share of the practical and theoretical teaching of the school. In some cases a double set of lectures is necessary. Co-operation of the principal Matron with the Matrons of the smaller hospitals is imperative, the principal Matron being responsible for the training of all the pupils of the school. So far as it has gone the system is satisfactory. During the year twenty-seven nurses from Great Britain were registered in New Zealand and

seventeen from Australia. Many of these nurses are travelling from place to place and remain but a short time.

The shortage of trained nurses for the various hospital staffs has considerably diminished, and there has not been the same difficulty in keeping a sufficient number of Sisters and charge-nurses, especially in the larger hospitals—no doubt the coming into force of the new rule for remaining a fourth year has affected this. At the same time the Hospital Boards have nearly all found it necessary to increase the salaries offered : these now range from £56 per annum for charge-nurses to £80 and £100 for Sisters.

There has been considerable delay in obtaining from England the twelve nurses for whom the Department was authorized to send, but, now that the offer of the Government is understood in nursing circles at Home, many more applications than are necessary have been received. A notice published in the Nursing Mirror has brought it prominently forward. The British Women's Emigration Association is assisting greatly in finding suitable nurses, and several well-trained, well-recommended women are to arrive in April, others in July. Some of these are sent through the High Commissioner's Office, in charge of the immigration girls for domestic service.

A discussion on the hours of duty for hospital nurses was brought up by a paper read at the Conference of Hospital Boards in June. In consequence of a request from the delegates a circular was sent to all the chief training-schools asking for the opinions of their officers as regards the following points :-

1. Q. The influence of the system on the carrying-out of treatment ordered by the medical staff. Is the system in the best interests of the patient? A. With the exception of two training-schools which maintain the opposite to be the result, all agree that this system is not in the best interests of the patient.

2. Q. The influence on the training of young women as nurses, especially with regard to the necessary qualifications of a nurse-viz., patience, gentleness, tact, observation, attention to detail, thoughtfulness as to comfort of their patients, trustworthiness, sense of responsibility, &c. A. It is considered by most that the cultivation of the necessary qualifications of a nurse is not affected by this system; others contend that short hours on duty mean a greater rush and worry, which, with long hours off duty, often spent till the last minute in running about from one place to another, make a nurse far more tired at the end of the day than if she worked for a longer period at lower pressure. Nurses who are on afternoon duty will often return just in time for duty after a long morning out, when most people would be fatigued-and nurses are no exception to this rule. Tiredness, of course, brings irritability, and irritability the converse of all those qualities we look for in a nurse.

3. Q. The influence on the length of training necessary in order to give in the larger schools adequate experience in all the branches of work. Can this be accomplished in the three years' course of training? A. Every one agrees that it would be an advantage for the period of training to be increased by one year, and that it is not possible to train nurses efficiently in all branches of their work in three years with an eight-hour system.

4. Q. Is it possible to give experience in theatre work during the time the nurses are actually on duty, or do the nurses attend operations in their hours off duty? A. Most training-schools have found that it is not possible to give adequate experience in theatre work to nurses while on duty

5. Q. The influence on the health of the nurses since the system has been adopted. A. The health of nurses under either system does not differ materially. One Medical Superintendent emphasizes the necessity of nurses learning mental and physical endurance and suppressing self-consideration, and speaks of the great importance of the careful selection of nurses as regards their health, suggesting that candidates be examined by a doctor, who would be immediately responsible to the Hospital Board for them.

6. Q. The influence on the discipline and loyalty of the nurses to their training-school. A. One Matron contends that discipline and loyalty are affected by the system; all others say the contrary.

7. Q. Where the system has been extended to the more responsible officers, such as Sisters in charge of wards, the influence on their work as trainers of the probationers and as ward-managers. A. All agreed that if the Sisters and charge-nurses are no longer than eight hours with the patients for whom they are responsible, the patients suffer and the training of probationers must be neglected.

The backblocks nursing system, though it was accepted with enthusiasm by the delegates to the conference, has not progressed so fast as is desirable. Several Boards have decided to extend their work in this direction, but so far no new appointments have been made except in Stewart Island, where Mrs. Somerville is now district nurse.

The Wairarapa Board intends to appoint two nurses for country work, the Gisborne Hospital Board one for the Motu district.

At Seddon, Uruti, Waiapu, and Hastings the work is going on satisfactorily.

A dispensary nurse has been appointed by the Otago Board, who visits the tuberculosis cases in their homes after seeing them at the dispensary. There is a great deal to be developed in this work.

Maori nurses : Two nurses in training came up for examination during the year. One succeeded in passing and was registered ; she was afterwards appointed assistant nurse under the Health Department. The second nurse will, it is hoped, pass her examination in June. The seven other Maori girls undergoing training are doing well at their respective schools.

NATIVE HEALTH NURSES.

In June, 1911, the care of the health of the Maoris was transferred from the Native Department to the Health Department, and a scheme was evolved to deal with the matter, in which the services of the nurse were especially required.

For a considerable time there had been some attempt to provide nursing treatment for the sick Maori—either through the Mission workers in different parts of the country (but unfortunately these nurses were seldom qualified), or by the detailing in times of epidemic of trained nurses to cope with the outbreak. These attempts, however, had no continuity, and it was frequently difficult to find suitable nurses for the work when they were wanted.

It was therefore decided to establish a special nursing service for work among the Natives, not only to attend them in actual illness, but to send nurses to live among them, help them with advice and example to live a more hygienic life and to bring up their children in a healthy manner. The nurse would detect illness and seek medical aid for it. She would largely prevent the spread of infection—now so common—by isolating the patients or by getting them into the local hospital, and by seeing that proper disinfection of premises and clothing is carried out. In this she would be aided by the Sanitary Inspector.

The scheme proposed was clearly put before the Hospital Boards at the conference in June, 1911, and was well received by the delegates.

Ahipara.—At the time of transfer of the care of the Maori health to this Department there was a serious outbreak of typhoid at Ahipara, in the far north, and Miss Bagley, a trained nurse of the Department, was sent to do what she could. A temporary hospital was established at a meetinghouse, and patients brought in from the different pas. There was at one time sixteen patients in this extemporized place. A second nurse was sent by the Bay of Islands Board to assist Miss Bagley, and the outbreak was practically stamped out in the course of three months. In this Dr. Lunn, a subsidized medical officer under the Native Department, assisted, and the Sanitary Inspector of the district had the pas cleaned up and disinfected.

Rotorua District.—The first nurse directly appointed for this special work was Miss Purcell, a registered nurse and midwife. She first went to Ahipara, and when that outbreak was over took up her station at Rotorua, Miss Bagley having prepared the way in that district. For eight months Miss Purcell did excellent work—travelling from pa to pa in the Rotorua and Taupo districts. The work was carried on with a good deal of difficulty, as most pioneer work is—the difficulty of obtaining suitable quarters is very great. A Native nurse—Maud Mataira, trained at the Wanganui Hospital —was sent to assist Nurse Purcell, but, owing to an outbreak of typhoid, has been kept on duty in the isolation hospital.

Miss Purcell, owing to ill health, resigned her position after about seven months' work, and Miss Cora Anderson was then appointed to this district, and took up her work in March.

Havera District.—The second nurse, appointed in August, was Miss Cicely Beetham, registered nurse and midwife. Miss Beetham has a wide range—from Hawera to Stratford—and there are a considerable number of pas. Her headquarters are at Okaiawa, and one of the chief difficulties is getting about from place to place. Miss Beetham uses a bicycle, but in the winter this will be difficult. Nurse Eva Wi Repa, trained at Napier Hospital, was appointed to assist Miss Beetham, but was not able to manage the work and was not in sympathy with the people. She resigned after a short trial. The cottage occupied by Miss Beetham is connected with the telephone, this being paid for by the Department.

In her reports Miss Beetham emphasizes the importance of a proper introduction by one of the chief men of the district, and a thorough explanation of the Native health scheme, as preparatory to commencing work of this kind. She says, "It proves the greatest help in working amongst the Maoris, and is always necessary as regards success; otherwise they will not receive me nor willingly accept nursing assistance. Some of the more enlightened of these people have received me well, but where superstition and bigotry exist, as in some parts of my district, my reception has been rather the contrary." On the suggestion of a Native clergyman a letter was afterwards sent from the Department, which was of assistance.

Monthly reports are sent by the nurse to the Hospital Board, and copies sent to the Department. These show a large amount of work among the adults and children—especially as concerns the latter in regard to diet and general treatment. There are many tubercular cases and some chronic cases of eczema and various accidents. There was also one enteric case and some pneumonia.

In November the nurse took advantage of a large tangi being held to meet a large number of the Natives together, and received a most hearty welcome.

In February Nurse Beetham was sent to report on the state of the pas in the Waitotara district, several cases of enteric having been reported from there. Her report showed the need for interference by the Sanitary Inspector. The two nurses were kept busy in February, spending some time with a typhoid patient, who recovered.

Miss Beetham reports : "At present the people are showing a keen interest in this nursing scheme. Many who were formerly opposed to it have now expressed approval of the nursing of their sick on pakeha principles, and have extended much gratitude for nursing assistance. Many of the people now send, wire, or write when assistance is required. The present stage is marked for the greatest hospitality and kindness received from the people. To stay in the kaingas and nurse the sick, thereby demonstrating instructions, is a wonderful help towards the progress of this work. Not only is the instruction beneficial, but by so doing the people clearly realize that the nurses have their welfare truly at heart and are deeply interested in the work and the people."

Cook Hospital District.—There being an outbreak of typhoid in this district, Miss Bagley was sent in November, 1911, to visit the pas round Gisborne and establish a Native nursing centre. She found that Te Karaka was the best place for a centre, and, as it was impossible to do much good work without having some place to which the Natives could come, she rented and furnished a small cottage for the nurse to live in. There was a large number of enteric cases, most of which were sent in to the Gisborne Hospital. Some of these were at Muriwai, and it was necessary for the nurse to be there a good deal.

In January Miss Jean Cormack, trained at the Dunedin Hospital, and also in midwifery at the Medical School, Dunedin, was appointed and sent to take charge of this district. Miss Bagley had previously been introduced to the Natives by some of the chief rangatiras and by Dr. Wi Repa, and was thus able to introduce her successor in a suitable manner. In March Nurse Cormack reported that she had been kept very busy at Muriwai, Waihirere, Te Karaka, and other pas, and nursed one patient with typhoid who was too ill to be moved to hospital. She has been very well received by the people and assisted in every way, is lent horses when she requires them, and has no difficulty in getting about. She has the assistance of Dr. Wi Repa and the Sanitary Inspector under the Hospital Board, and is more comfortably situated than some of the other nurses.

Waiapu District.—At Tuparoa a nursing-station was established in 1910 by the Native Department, and Nurse McElligott was sent to work there during an outbreak of typhoid among the Natives. A camp isolation hospital was established, and the cases were so numerous that it was kept open for over a year. Nurse Heni Whangapirita, trained in the Wellington Hospital and in the St. Helens Hospital (now married), assisted Nurse McElligott, and very excellent and devoted work was done until the sickness subsided. Although Nurse McElligott did not entirely fulfil the qualifications required by the Health Department, yet, when the work was transferred to that Department, her excellent work was recognized, and she was appointed one of the Department's nurses.

Te Araroa, another and an isolated part of the Waiapu District, is also to be a station for a nurse. The European residents and the Maoris of the district have established there a cottage admirably adapted for a residence for two nurses, with a room in which emergency cases can be taken. This district is much cut off from medical aid, but with a good nurse and a telephone to Waipiro—where Dr. Davis, the nearest doctor, resides—things would be much improved for the settlers. Miss Bagley was sent on to the district to report on its requirements and the possibilities for a nurse. Her report shows that a nurse is greatly needed, and will be warmly welcomed, and that this cottage would serve well as a centre. The people are willing and able to assist in keeping up the cottage, and in maintaining a probationer to help the nurse, who will be sent by the Department. The Waiapu Hospital Board, Miss Bagley reports, is ready to assume the responsibility of administering the cottage under a local committee. Mr. Henderson, one of the prime movers in the plan, has great influence with the Maoris. He and others have collected money enough to pay for a horse, trap, and saddle for the nurse, and have practically promised to collect the assistant's salary. A permanent nurse will shortly be appointed for the district, and, if possible, a Maori assistant. In the meantime Miss Bagley will carry on the work there, Miss Henderson living with and helping her. So much has been done by the residents of this isolated place that they deserve every help and encouragement. A nurse with midwifery certificate is essential. The women arrange to go to Gisborne, but frequently the weather is too bad for the boats to call, and they perforce must remain at home and do the best they can.

Otaki District.—A nurse has been appointed for this district, and sent to work under the Wellington Hospital Board. Nurse Lewis was trained in general and midwifery work at the Bristol Infirmary. There is not the great need in this district as in others, the hospital being near and the Natives more civilized. Still, no doubt useful work can be done here—especially in educating the mothers.

Many more nurses are wanted, but rather than jeopardize the success of the work by hasty appointments, nurses are carefully selected from time to time, and if possible the districts are organized by Miss Bagley, who has had considerable experience in dealing with the Natives.

THE MIDWIVES ACT.

During the last year there have been two examinations of pupils trained in the State maternity hospitals, the Medical School Maternity Hospital, the Linwood Refuge, the Alexandra Home, and the Townley Maternity Hospital. Sixty-three candidates came up for examination, and fifty-five passed and are now registered as midwives.

Six free pupils have been trained and are practising in various parts of the country. It has been proposed by one Hospital Board to subsidize the midwife who has agreed to practise two years in a country place in return for her free training. This is a fair thing, as she can then afford to wait until she has built up a sufficient practice. In some places this might at first be difficult.

It is a complaint from the country districts that the trained midwives remain in the towns where already the people have ready access to medical assistance as well as hospital treatment, but on the other hand doctors in town complain that there are not enough of the trained midwives and frequently it is impossible to get one. This must surely be remedied in a short time, as so many are added to the register each year. The former complaint is not entirely true, as a fair proportion of the pupils trained do settle in the country, and a good many have established nursing-homes in the smaller towns in which from two or three to six patients are received at one time. These midwives nearly all work under medical practitioners, the fact that they largely depend on the support of the doctors contributing to this. If, however, they are to be the assistance to the larger class of women that it is desirable they should be, they must by degrees exercise the full power conferred by their certificates—that is, assume the function which in older times and the middle ages was exclusively left to women—to act as accoucheuses, only calling in the physician in case of need. To be of much service in the backblocks district nursing it is essential that the nurse-midwife should so act, and she must accordingly recognize her responsibilities.

The midwives throughout the country have been visited by the two Inspectors of Midwives during the year. It has not been possible to see all of them, owing to long distances and women sometimes being away from home, also to some having charged their addresses and failed to notify the Department. A great improvement in the midwifery bags and outfit of the women was noticed, and many were glad to see the Inspectors and had many inquiries to make as to the proper methods of working. The scattered nature of the population and the great difficulty of gathering together any number of women has made it almost impossible to do much teaching by lectures, although an attempt was made, but individual teaching was much appreciated.

The number of suspensions on account of septic cases was not large. Ten women were taken off the register on account of death, or at their own request. Five women were prosecuted for acting as midwives though unregistered. Many have been warned for the same reason.

The number of midwives from overseas who have been registered is nineteen. There are now 1,097 on the register, 415 trained and 682 untrained.

The reports of the several maternity hospitals which follow show an increase in both indoor and outdoor work—in all 1,346 patients being treated. In the four St. Helens Hospitals there had only been two deaths—one admitted moribund, the other from eclampsia.

THE PRIVATE HOSPITALS ACT.

During the year the private hospitals, with one or two exceptions in very distant places, have all been visited and inspected, some more than once.

Many of the licensees find a difficulty in complying with the regulations in regard to the keeping of the register of patients. In some cases it is their own fault, in others a few of the doctors raise objections to entering and signing the particulars required. This objection has almost entirely been overcome, but still they appear to find difficulty in keeping the register at all up to date.

During the year fourteen new houses were licensed, sixteen gave up their licenses or allowed them to lapse, and two were transferred to a new holder. There are now, of private hospitals,---

Reports on the State and other Maternity Hospitals.

St. Helens Hospital, Wellington.

Stipendiary Medical Staff: Agnes Bennett, M.D., B.Sc., M.S., Univ. Edin. Matron: Eleanor B. Brown.

From the 1st April, 1911, to the 31st March, 1912, 174 cases were confined, 147 children were born, and there were 14 still-births. There were no maternal deaths, 1 death of infant. 83 patients were attended in their own homes, 83 babies were born.

The new hospital is almost ready for occupation, and it is hoped to move into it within a few weeks. It is intended then to induce patients who will be the better for some ante-partum treatment and rest to come into the hospital for some weeks. Patients from the country will also be encouraged to come in good time and wait. The accommodation will be sufficient and comfortable, the surroundings pleasant.

During the absence on leave of Dr. Agnes Bennett, Dr. Elizabeth Gunn carried out her duties with satisfaction to the Department. Dr. Bennett resumed her charge in January.

The Matron, Miss Brown, was seriously ill for some time, and was granted three months' leave, during which the Sub-Matron, Miss Warnock, took charge. Miss Brown returned to her duties in March much restored in health.

Eleven pupils were trained during the year. Note by Medical Officer.—From the 31st March, 1911, to the 31st March, 1912, the conditions of the Hospital have been very trying to the nursing staff-the want of proper supplies of washing and sterilizing-appliances has told severely on some of them, and the strain upon those in responsibility has been very great. It is absolutely necessary that there should be a good many more beds than the average number of patients per week seems to justify. The work comes in such rushes that at times the accommodation has been taxed to the utmost, and patients have had to leave the Hospital when a few more days' care would have been of great benefit to them. The staff look forward with relief towards the alleviation of these conditions in the new building, where we hope to have the work in full swing very shortly.

St. Helens Hospital, Dunedin.

Stipendiary Medical Staff: Dr. Emily Siedeburg, M.B., Ch.B., N.Z., L.R.C.P., Irel. Matron : A. H. Holford.

From the 1st April, 1911, to the 31st March, 1912, 201 cases were confined, 195 children were There was 1 maternal death, 7 deaths of infants. 52 patients born, and there were 5 still-births. were attended in their own homes; 52 babies were born.

In this Hospital there have been no changes during the year. The isolation building is now being erected. In the course of the next two or three years it is intended to build a nurses' home, probably on the site of the present cottage, which, though old and out of date, is not uncomfortable.

The work of the hospital has considerably increased during the year. The garden party held to celebrate the birth of the thousandth baby was indirectly responsible for this, as, through the country papers illustrating and describing the function, many women have learnt of the existence of this hospital, and have since availed themselves of its privileges.

Dr. Emily Siedeberg has been granted leave of absence for nine months, and Dr. Sophia Child, late resident physician at the Women's Hospital, Sydney, has been appointed to take her place. Dr. Siedeberg leaves on the 16th April.

Miss Holford and Miss Gow are still Matron and Sub-Matron, and the success of the Hospital is largely due to their conscientious work.

Ten pupils have been trained during the year; one of these is a free pupil for country work. Note by Medical Officer.—Babies' deformities: One anencephalic foctus. One spina bifida, with paralysis of lower legs. One born with no thumbs. One had marked talipes varus, and was pigeonchested. In one there was a peculiar deformity of the ribs: on the left side only the three upper ribs reached the sternum, the remainder stopped short at the auxiliary line, and with each inspiration the lungs protruded as a soft tumour on the chest-wall; the heart was on the right side. One child was born with a lower tooth. Notes on mothers: One mother gave the history of menses returning regularly every month and lasting three to five days; in another they came regularly for five months. The maternal death was from eclampsia. At seventh month she showed no alb. and no symptoms; admitted in labour at eighth month-no symptoms; when labour well advanced took one fit at 5 a.m. -slight ham., rigid and unconscious, breathing stertorous; delivered easily with forceps; baby still-born and shrivelled; mother never conscious again; died 9 a.m.

St. Helens Hospital, Auckland.

Stipendiary Medical Staff: Tracy R. Inglis, Bach. Med., Univ. Melb. Matron: C. Ludwig.

From the 1st April, 1911, to the 31st March, 1912, 249 cases were admitted, and 253 children were born; there were 3 still-births. There was 1 maternal death, 4 deaths of infants. 231 patients were attended in their own homes, and 231 children were born. There were no maternal deaths or infant deaths.

It will be necessary in the immediate future to build a new hospital for Auckland. The amount of work is steadily increasing, and necessitating a larger staff, for whom there is no provision. Efforts have been made to rent rooms or a small house near by for additional accommodation for the nurses, but without success. The present Hospital will do well for administration and staff quarters, and new wards must be provided.

The outdoor work is growing. Besides the Hospital patients many doctors apply for the services of the pupil nurses for their private cases. While this is gratifying and of value to the nurses, it can only be undertaken when private nurses cannot be obtained. So far, however, the number of trained midwifery nurses is not equal to the demand.

Dr. Tracy Inglis still continues as Medical Officer, and under his able superintendence and Miss Ludwig's careful and conscientious management the Hospital has been a great benefit to the poorer classes in Auckland.

Sister Paul's resignation early in the year was a very great loss, but, as she has established a private maternity hospital, her services are still at the command of the public. Miss Broadley has been appointed Sub-Matron.

Twelve pupil nurses were trained during the year, three free pupils for country work.

Note by Medical Officer.—I have to report a successful year at this Hospital. There were no very abnormal cases. The only maternal death was moribund on admission. In this case version was performed and the child delivered quickly, but the patient never rallied. Hyoscin was used in fifteen cases, all primipara. One patient had a bicornate uterus, and one had a double vagina. In this last case I could not determine whether there was a second uterus. There was a second undeveloped cervix. The Matron, Miss Ludwig, has worked hard and very successfully during the year, and has trained the nurses very well. The high position gained at the State examination was due in a great measure to her exertions. The Sub-Matron has also worked well. The pupil nurses, as a whole, have worked satisfactorily. The Hospital is very cramped for room, and the want of a proper sterilizing outfit and a good delivery theatre is often severely felt.

St. Helens Hospital, Christchurch.

Stipendiary Medical Officer: William Irving, M.R.C.S., Eng., L.R.C.P., Lond., M.B., B.S. Univ-Camb.

Matron: M. M. Cameron.

From the 1st April, 1911, to the 31st March, 1912, 262 cases were confined, 252 children were born, and there were 9 still-births. There were no maternal deaths, 5 deaths of infants. 94 patients were attended in their own homes, 94 babies were born.

The work of this Hospital has gone on very steadily; at times the accommodation has been severely taxed, and it is not too soon that tenders have been called for a new hospital. It is hoped the building will be erected by the beginning of 1913.

A complaint of long hours being imposed on the pupils was carefully investigated, with the result that it was proved that the ordinary hours of duty were eight, but that now and again it was necessary to arrange a ten-hour shift. This had only been necessary for one period of about ten days during the year, while at other times the Matron had been able to give pupils much longer time off. The uncertain nature of midwifery work renders it impossible to make a regular definite schedule of hours, and nurses may often be on duty merely waiting for their cases to come off.

Twelve pupils were trained and registered during the year; two free pupils were trained and have gone to the country.

Dr. Irving's capable conduct of the medical department of the Hospital, and the conscientious management of Miss Cameron, aided by Sister Newman, have been very satisfactory to the Department.

Note by Medical Officer.—The year has been successful, and work satisfactory. It is to be hoped that next year we shall be able to have all the patients and nurses under the same roof. The conditions under which the nurses live and their accommodation at present are not creditable.

Report of the St. Helens Hospitals from the 1st April, 1911, to the 31st March, 1912, compiled from Reports by the Physicians and Lecturers.

Complete		20	Due to anæmia; cicatrices due to burns; defective breasts; inverted nipples; heart and kidney trouble; acute diabetes; chronic ne-
			phritis; severe mastis; 2 abscess of breast; consumption; general poor health; albuminuria; retracted nipples; prematurity.
Partial	••	113	Large number due to anæmia; supplementary feeds twice during day given; many able to nurse entirely at third week. Milk-and-water,
			humanized milk, milk and barley-water, and Glaxo were used.

In all four hospitals the success in establishing breast-feeding in cases who have never nursed before, and also in the rearing of premature infants, has been most satisfactory. Every advantage has been taken of keeping such infants in hospital for some months for the instruction of the pupil nurses.

MATERNITY HOMES.

The Townley Maternity Hospital.

The Hospital continues to do excellent work. There have been 92 patients during the year. Miss Cora Anderson resigned her position in November, to the great regret of the Committee. Miss Siedeberg took temporary charge for some months, and in January, Miss Stubbs, trained at the Christchurch Hospital and in midwifery at Clapham School of Midwifery, was appointed Matron. Three pupil nurses were trained, and there are four now in training. Dr. Porter is still in charge.

Medical School Maternity Hospital.

(Under Otago Board.)

There were 7 women in-1 waiting; 5 of these were married women Visted on the 13th March. in the upstairs ward.

Miss Every is in temporary charge of the institution. There were four nurses in training. I consider that a second trained midwife should be added to the staff, and that some district work should be done, as that work is very important for the training of the pupils. The trained midwife is also needed to relieve the Matron.

The place was, as usual, in good order, but more accommodation is badly needed for the nurses. At the time of my visit two nurses-one on day and one on night duty-were sharing a room.

Linwood Refuge.

(Under North Canterbury Hospital and Charitable Aid Board.)

Visited on the 15th March. There were 10 girls and 6 babies-all in the new building. The old building is being prepared for the second-maternity cases from the Samaritan Home, and about 12 old women from the same institution.

It is proposed to treat the second-maternity cases during confinement and puerperium in the new building, afterwards transferring them to the old one for the six months that they are obliged to stay in the institution.

This institution does good work in training a few pupils in midwifery.

Victoria Home for Girls, Invercargill.

Visited on 9th March. There were 6 girls in, and 9 children.

The Matron was absent. The children looked well, but there was a lack of neatness and order about the Home. A young married woman, deserted by her husband, was in the maternity ward.

St. Mary's Home, Otahuhu.

Visited on 8th February, 1912. There were 27 girls in and 41 babies altogether-25 of these being in the children's ward and 16 in the Hospital with their mothers.

The place is beautifully kept. A portion of a grass court was being enclosed for the older babies. Three babies were in the sick or infectious ward with gastroenteritis-under the charge of a girl from St. Mary's, Karori, who was under the supervision of Nurse Bennett. There was also a child who had been badly burned, and who had been brought in from outside.

Dr. Aubin attends the maternity cases, and the children when needed. Nurse Wilson is still in charge of the maternity wards. There were three patients still in bed. All work together very harmoniously under Miss

Handcock.

Door of Hope, Auckland.

Visited 6th February, 1912. There were 17 girls in-5 with their infants, and 13 babies in the babies' cottage being treated for malnutrition.

Dr. Sweet attends here, and there are very good results. A piece of ground has been bought next to the place, and better accommodation for the children and for the maternity cases is to be built.

Salvation Army Maternity Home, Wellington.

Visited on 31st October, 1911. There were 11 girls and 8 babies in. Everything was in good order. There were several girls waiting confinement.

Salvation Army Maternity Home, Christchurch.

Visited 16th March, 1912. There were 22 girls in and 20 infants; 6 babies had been left here by their mothers; there were 7 waiting patients.

There are no sick babies. They are kept out in the open air all day, and thrive well.

Salvation Army Maternity Home, Dunedin.

Visited on 13th March. There were 11 girls and 16 babies in. All looked well, and the place was, as usual, in excellent order.

Salvation Army Maternity Home, Auckland.

Visited in October, 1911. This is the least satisfactory of the Salvation Army Homes. The building is quite unsuitable for hospital work. It has long been intended to build or rent a new place.

To the Inspector-General of Hospitals.

APPENDICES.

APPENDIX I.—PUBLIC HEALTH.

GENERAL STATISTICS FOR THE YEAR 1911.

PART I.--VITAL STATISTICS.

A. GENERAL.

For the following statistics relating to births, death-rates, infant mortality, and causes of death the Department is indebted to the returns of the Registrar-General. They relate to the year 1911.

BIRTHS.

The number of births registered during 1911 was 26,354, or 25.97 in every 1,000 persons living. The number is 370 more than that for the year 1910, an increase of 1.42 per cent., the rate, however, being lower by 0.20 per thousand. From 1882 until the year 1899 there was a regular fall in the rate. The births registered in the year numbered 19,846 in 1884, and, after falling to 17,876 in 1892, have risen to the number first stated above.

The number of male children born during 1911 was 13,532, and of female children 12,822.

The following table shows the number registered, the birth-rate calculated on the total population, and comparison with the average rate for 1882-86 taken as 100. Indications of a gradual increase are apparent, the improvement since 1899 being 3.38 per cent. on the rate per 1,000 in that year.

Births. Number and R	late.
----------------------	-------

			Birth-rate.				
Year.	Total Number of Births registered.	Per 1,000 of Population.	Compared with Rate in 1882–86 taken as 100.	Year.	Total Number of Births registered.	Per 1,000 of Population.	Compared with Rate in 1882–86 taken as 100.
1882-86	19,410	$35{\cdot}40$	100	1899	18,835	$25 \cdot 12$	71

1898	18,955	25.74	73				

The average number of children to a marriage may be ascertained by comparing the number of legitimate births for a series of years with the marriages, but commencing with the marriages in the year preceding that for which the first number of births is taken. Calculating in this way the figures for the twenty-year period 1892–1911 show a decline from 4.54 to 3.07 as follows :---

Year.	Ŧ				Marriages.	Legitimate Births.	Proportion of Births to every Marriage solemnized in the Preceding Year.
1891		•••		•••	3,805		•••
1892					4,002	17,283	4.54
1893	•••	••••		••••	4,115	17,514	4.37
1894		•••			4,178	17,824	4.33
1895					4,110	17,711	4.24
1896		•••	•••		4,843	17,778	4.32
1897					4,928	17,911	3.70
1898				•••	5,091	18,154	3.68
1899					5,461	18,066	3.54
1900			•••		5,860	18,640	3.41
1901					6,095	19,554	3.34
1902	•••				6,394	19,734	3.23
1903	•••				6,748	20,835	3.26

28

Year.			t get i	Marriages.	Legitimate Births.	Proportion of Births to every Marriage solemnized in the Preceding Year.	
1904			 	6,983	21,737	3.22	
1905			 	7,200	22,600	3.24	
1906	•••	• • •	 	7,592	23, 120	3.21	
1907			 	8,192	23,937	3.15	
1908			 	8,339	24,835	3.03	
1909		•••	 	8,094	25,301	3.03	
1910			 	8,236	24,822	3.02	
1911	•••		 •••	····	25,276	3.07	

If the average result be taken out for the ten years 1892–1901, it will be found to represent 3.89 births to a marriage. Dealing similarly with the figures for 1902–1911, the result is an average of 3.14, so that regarded annually or decennially there is a decided fall to be observed.

New Zealand had in 1880 the highest birth-rate in Australasia (40.78); in 1900 the case was reversed; but in 1911 the New Zealand rate was higher than that of Victoria.

The movement over ten years is calculated as under :----

Birth-rates per 1,000 of Population.

Country.		1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.

Sexes of Children born.

The figures show that during each year there has been a preponderance of births of male children. It would appear, however, that this excess of male births is not sufficient to compensate for the heavier mortality which occurs among that sex. Of the total population in 1871 there were 70.52 females to every 100 males, but in 1911 the proportion of the females to 100 males had risen to 89.59.

	Year.				of Births of	Proportion of Births of Males

			1		1 .		

1.1.1

Plural Births.

 $^{\circ}29$

There were 300 cases of twin births (600 children) and 2 cases of triplets registered in 1911. The number of children born was 26,354; the number of mothers was 26,050: thus, on an average, one mother in every 86 gave birth to twins, against 89 in 1910, 99 in 1909, 90 in 1908, and 102 in 1907. The proportion of plural births per 1,000 of all births during the past five years was,—

Year.							All Births.	Plural Births	Plural Births per 1,000 of all Births.
1907	• • •	••		•••	•••		25,094	244	9.72

1911	••	••	• •	• •	••	••	26,354	302	11.46

Illegitimacy.

The births of 1,078 children were illegitimate : thus 41 in every 1,000 children born were born out of wedlock, against 45 in 1910.

Year.	Queensland.	New South Wales.	Victoria.	South Australia.	Western Australia.	Tasmania.	New Zealand
1901	5.93	7.16	5.58	3.96	3.88	5.94	4.57
1902	6.04	6.60	5.51	4.35	3.96	6.12	4.46
1903	6.79	6.71	5.73	4.16	4.70	5.61	4.55
1904	6.90	7.12	5.74	4.02	4.36	5.82	4.52
1905	6.97	7.37	5.61	4.35	4.19	5.52	4.57
1906	7.68	7.04	5.58	4.00	4.78	5.78	4.67
1907	7.68	6.92	5.62	4.09	3.86	5.78	4.61
1908	7.54	6.80	5.76	4.47	4.35	5.24	4.26
1909	7.05	6.44	5.92	4.22	3.95	5.45	4.61
1910	6.39	6.28	5.59	4.38	4.13	5.33	4.47

Proportion of Illegitimate Births in every 100 Births.

These figures show the proportion of illegitimate births to every 100 births for New Zealand to be fairly steady during the period 1901-10.

Births and Birth-rates in the Four Chief Cities and their Suburbs.

The total number of births registered as occurring in the four chief centres and suburbs in 1911 was 7,473, as against 7,221 for the previous year.

The birth-rates for last year were,—

	•			Birth-rates Mean Po	per 1,000 of pulation.
Auckland City	•••• •••	•••		30.03	
"	and eight suburban boroughs	•••	•••		27.25
Wellington City	•••• ••• •••			26.67	
"	and four suburban boroughs	•••	•••		26.08
Christchurch City		•••		28.45	
"	and four suburban boroughs	•••			26.84
Dunedin City	· · · · · · · · · · · · · · · · · · ·	•••		27.45	
"	and six suburban boroughs	••••	•••		26.52

By the inclusion of the suburbs the rate is lowered in the case of all four centres. Excluding the suburbs, it will be observed that Auckland has the highest rate, Dunedin next highest, Christchurch and Wellington following. The birth-rate for the Dominion last year was 25.97 per thousand, so that each of the four centres is above the average.

The birth-rates for the four central boroughs last year are higher than those of 1910. In Auckland the rate rose from 27.75 to 30.03; in Wellington from 24.13 to 26.67; in Christchurch from 27.10 to 28.45; in Dunedin from 27.22 to 29.45. The rates for five years, 1907 to 1911, are,—

		· · · · · · · · · · · · · · · · · · ·	-Births per	1,000 of Po	pulation	
		1907.	1908.	1909.	1910 .	1911.
Auckland (without suburbs)		29.63	30.56	29.73	27.75	30.03
Wellington "		27.53	27.60	26.62	24.13	26.67
Christchurch "	•••	30.47	28.43	28.55	27.10	28.45
Dunedin "	•••	25.69	25.48	28.34	27.22	29.45

MARRIAGES.

The marriages for 1911 show an increase on the number for the previous year. The number was 8,825, or 589 more than in 1910. The rate per 1,000 of the population was 8.70, as against 8.30 in 1910. It is shown by the table following that there has been considerable increase in the marriage-rate, which has been above the standard during each of the last fifteen years :---

		Marri	age-rate.			Marriage-rate.		
Year.	Total Number of Marriages registered.	Per 1,000 of Population.	Compared with Rate in 1882–86 taken as 100.	Year.	Total Number of Marriages registered.	Per 1,000 of Population.	Compared with Rate in 1882–86 taken as 100.	
1882–86	3,663	6.68	100	1899	5,461	7.28	109	
				1900	5,860	7.67	115	
1887	3,563	5.97	89	1901	6,095	7.83	117

1898	5,091	6.91	103			•		

Marriages, Number and Rate.

The marriage-rate, measured by the total population, does not show the true position when, as in the case of New Zealand, the age-constitution of the people fluctuates considerably. A more satisfactory standard is found in the number of persons of marriageable age, defined as meaning the unmarried and widowed of males aged 20 years and upwards and of females aged 15 years and upwards. The rates are given for six census years :---

			of Unmarried) of Total.	Proportion of Marriages per 1,000 of the					
Year of Census.		Males.	Females.	Marriageable Men.	Marriageable Women,	Marriageable Persons.	Total Population.		
1886		235.0	238.2	47.32	54.56	25.36	5.99		
1891		238.2	268.5	47.78	47.97	23.94	6·04		
1896		258.8	308.9	50.14	47.00	24.26	6.85		
1901		275.5	331.8	54.11	49.78	25.93	7.83		
1906		291.3	328.2	54.36	54.93	27.72	8.48		
1911		286.5	314.9	57.60	58.38	28.99	8.70		

The total number of marriages solemnized does not include marriages where both parties are of the aboriginal Native race, such persons being exempted from the necessity of complying with the provisions of the Marriage Act, although at liberty to take advantage thereof. Forty-five marriages in which both parties were Maoris were contracted in 1911 in terms of the Act, the greater portion (27) being solemnized before Registrars. In addition, the Registrar-General received returns of 228 marriages solemnized under the provisions of section 191 (1) (b) of the Native Land Act, 1909.

Ages of Persons Married.

Of the persons married in 1911, 172 bridegrooms and 1,326 brides were under 21 years of age. Of the bridegrooms, two were between 17 and 18, and sixteen between 18 and 19. Of the brides, ten were between 15 and 16, and forty-nine between 16 and 17 years of age. The proportion of men married is greatest at the ages of 25 to 30, and of women at from 21 to 25 years.

DEATHS.

The deaths in 1911 numbered 9,534, a rate of 9.39 in every 1,000 persons living, as against 9.71 in 1910. This is below the average of the previous ten years, 9.83 per 1,000.

		Deatl	n-rate.			Death-rate.

1897	6,595	9.14	84	1911	9,534	9.39	87	
1898	7,244	9.84	91					

The following table shows the number of deaths, and the death-rate per 1,000 of the living population; also a comparison with the average rate for 1882-86 :---

* Average for five years.

The death-rates of males and females for the last ten years are shown separately in the next table, and also the number of male deaths to every 100 female deaths :---

		_		Deaths p	Deaths of Males		
Year.				Males.	Females.	Total.	to every 100 Females.
 1902				11.64	9.23	10.50	140
1903		••		11.43	9.24	10.40	138
1904				10.64	8.37	9.57	143
1905	••			10.18	8.24	9.27	139
1906	••			10.40	8.08	9.31	145
1907	••	••		11.81	9.98	10.95	133
1908		• •		10.62	8.38	9.57	143
1909				10.18	8.14	9.22	141
1910				10.67	8.63	9.71	139
1911				10.46	8.21	9.39	142

Males of tender years are more delicate than females, and, later in life, more liable to accident. These disadvantages are partly compensated by the preponderance of male births, but were it not for the fact that excess of immigration over emigration gives the country many more males than females the tendency would be for the female population to exceed the male.

For the purpose of considering the mortality in New Zealand more closely than can be done by means of crude death-rates, it is desirable to ascertain the rates at different age-periods of the population.

Death-rates per 1,000 living at Various Age-periods.

Ages.	Average 1902–6.	1907.	1908.	1909.	1910.	1911.	Decrease per Cent. in 1911 compared with 1902-6.

- H.---31.

Besides advantages of climate, New Zealand possesses a population younger in age-constitution than that of most other countries—conditions favourable to a low rate of mortality. Another table is given comparing death-rates at twelve age-periods for 1909 with those of England and Wales. Here the extremely low rate of mortality among children under five years of age is remarkable, and the difference at some of the groups at the more advanced ages is considerable. The New Zealand rate for males is higher than that for females at all groups excepting 5-10, 10-15, 35-45; while for England and Wales the female rate is greater than that for males at 5-10 and 10-15 years, and is lower in every other instance.

Death-rate per 1,000 Persons living, according to Sex, for the Year 1909, compared with England and Wales.

* Excluding the Northern Territory.

Considering the range of this statement New Zealand is conspicuous as showing the lowest deathrate. The rates for the principal Australian States are a little higher, but, generally speaking, far below those for the United Kingdom or the European Continental States mentioned in the table.

Ages at Death.

The deaths occurring during 1911 are tabulated below in single years up to five years, and from thence in groups, showing males and females separately :---

Deaths and Death-rates in the Four Chief Cities and their Suburbs.

The total number of deaths registered for the four centres in 1911 was 2,932—viz., 2,308 in the cities, and 624 in the suburbs.

Auckland City	•••	•••		of Mean Population. 13.68
	and seven suburban boroughs	•••	•••

INFANTILE MORTALITY.

Subjoined is a classified statement of the deaths of infants under one year during 1911, with the ratio of the deaths in each class to the 1,000 births during the year :---

Year.		Sex.		Under 1 Month.		1 and under 3 Months.	3 and under 6 Months.	6 and under 12 Months.		fotal under 12 Months.
1911	Male Female	···· ··	1	nber of . 447 304	Dea 	ths. 130 87	$\frac{135}{99}$	$\begin{array}{c} 147\\ 135\end{array}$	-	859 625
1911	$\left\{ \begin{array}{c} \mathbf{M} \mathbf{a} \mathbf{l} \mathbf{e} \\ \mathbf{F} \mathbf{e} \mathbf{m} \mathbf{a} \mathbf{l} \mathbf{e} \end{array} \right.$	De	.	to the 1 23·03 23·71	,000	Births. 9·61 6·78	 9·98 7·72	10·86 10·53	2	$\begin{array}{c} 63 \cdot 48 \\ 48 \cdot 74 \end{array}$

Sixty-three out of every thousand of male children born, and forty-nine of every thousand females, are found to have died before attaining the age of one year. The mortality was thus one in sixteen of male children and one in twenty-one of females in New Zealand.

It will also be seen from the figures that the chances of living during the first year of age are greater for female than for male infants. Thus, during the year 1911 there were—

$100 \mathrm{deat}$	hs of male	s to $72~{ m de}$	eaths of female	es under 1 month of age ;
100	,,	71	,,	from 1 to 3 months of age;
100	,,	77	,,	from 3 to 6 months of age;
100	,,	97	,,	from 6 to 12 months of age;
100	,,	77	,,	under 12 months of age.

Dealing with the result for ten years, the deaths of infants under one year are in the large proportion of three-fourths of the total deaths under five, as might be expected, the first year being the tenderest period. (See notes to tables.)

				f Infants ur ach Year, a	Total Births registered	Proportion of Deaths of Infants

The principal causes of mortality in children under one year for New Zealand are given, with the numbers of deaths for five years from such causes. Premature birth stands first in order of importance, diarrhœa and enteritis next, followed by marasmus or debility. Here it is seen how much mortality is attributed to these causes according to the medical certificates.

	Number of Deaths from each Cause.					Percentage of Total.

TYPHOID FEVER.

Deaths from this cause numbered 67 in 1911, against 62 in the previous year, the average for five years being 65. MEASLES.

There was an outbreak of this complaint in 1907, causing 101 deaths. In 1910 only 1 death was recorded, but in 1911 the number was 41.

SCARLET FEVER.

The number of deaths from scarlet fever in 1911 was 9. The average annual mortality for the five years 1907-11 was 27.

WHOOPING-COUGH.

There were only 17 deaths in 1911, as against 148 in 1910, 41 in 1909, 42 in 1908, and 307 in 1907.

INFLUENZA.

This was less prevalent in 1911 than in 1910, 63 deaths being recorded, as against 141.

TUBERCULOSIS.

Deaths from phthisis numbered 536 or 5.28 per 10,000 of the population, against 550 or 5.54 in 1910, and 588 deaths or 6.05 per 10,000 in 1909. The average for the past ten years was 573, or 6.36 per 10,000.

CANCER.

There were 809 deaths assigned to this cause in 1911, a proportion of 7.97 per 10,000 persons, the average number and rate for the five years 1907-11 being 719 and 7.41 respectively. Deaths of males numbered 448, and of females 361. The death-rate from cancer is greater than that from tubercular diseases, and its increasing tendency is a matter of grave concern.

Number of Persons who died from Cancer, the Proportion per 10,000 Persons living, and the Percentage of all Deaths.

DIABETES.

There were 129 deaths in 1911, a rate of 1.27 per 10,000, the average for the five years being 109 and 1.12 respectively.

SIMPLE MENINGITIS.

This disease caused 138 deaths in 1911, the average of the past five years being 135.

CONVULSIONS OF CHILDREN.

It would appear that the mortality from this cause shows a decreasing tendency, although the rate, measured by the total population, was exceptionally high in 1909. The proportion of deaths per 10,000 children living under five years of age was 11.52 in 1905, 11.65 in 1909, 9.32 in 1910, and 9.17

40

APOPLEXY.

The average number of deaths from this cause during the past five years was 346, and the rate per 10,000 3.57. Last year the number of deaths was 352, and the rate 3.47 per 10,000.

PNEUMONIA.

There were 522 deaths in 1911, against 448 in 1910. Excepting occasional fluctuations due to exceptional climatic conditions, the rate per 10,000 remains fairly constant.

GASTRITIS AND ENTERITIS AND DIARRHEAL DISEASES.

Although shown separately in the table, it may be advisable to consider these causes together. The number of deaths recorded in 1911 was 468, a rate of 4.62 per 10,000, as compared with an average of 612 and 6.39 respectively for the past five years.

CIRRHOSIS OF LIVER.

There were 44 deaths in 1911, as compared with an average of 45 for the five years 1906-10.

APPENDICITIS.

There were 103 deaths ascribed to this cause in 1911, the average number for five years being 87.

BRIGHT'S DISEASE AND NEPHRITIS.

Of the 277 deaths last year, 209 were certified as Bright's disease and 68 as acute nephritis. The rate per 10,000 living for 1911 was 2.73, against an average of 2.74 for the last five years.

PUERPERAL DISEASES.

In 1911 the deaths certified to these causes numbered 114. Included in the number were: Accidents of pregnancy, 43; puerperal septicæmia, 27; other accidents of childbirth, 44. number of deaths to every 1,000 confinements for each of ten years is shown. The Deaths of Mothers

Year.			Deaths of Mothers to every 1,000 Confinements.	Year.			to every 1,000 Confinements.

B. LOCAL VITAL STATISTICS.

AUCKLAND HEALTH DISTRICT.

For the second time the whole of the statistics are for the year ending the 31st December. The statistics dealing with births and deaths, the deaths and death-rates from infectious diseases, are those of the Registrar-General, and deal only with the City of Auckland and the eight surrounding boroughs of Birkenhead, Devonport, Grey Lynn, Mount Eden, Mount Albert, Newmarket, Northcote, and P. rnell, a population of 83,280, being an estimated mean for 1911. Mount Albert, having become a borough, is included for the first time. The effect of the inclusion of successive suburban districts in "Auckland and suburban boroughs" is to reduce both the birth and death-rates of that area.

Population.

The	mean population for the	e year is ·	taken to b	e,				
	Auckland City Suburban boroughs	• •	••	• •	r. 2 s. ters	••	••	$40,790 \\ 42,490$
	· · · · ·		No. 1					83,280

The actual population of Auckland, with its suburbs, as at the census of the 2nd April, 1911, is stated by the Registrar-General to have been 102,676, but these figures do not include the Borough of Onehunga, which is now essentially a part of Greater Auckland, and, if included, brings the total population of that area to 107,327; and the estimate to 31st December is 104,728, or with Onehunga's population at the census, 109,379.

NOTE.—In every case throughout this report where comparison is made with previous years the period referred to is that from January to December inclusive, the figures given in previous reports having been brought into unison with the calendar year. The earlier reports related to the yearly period 1st April to 31st March.

	Birth-ra	ite.			Per 1,000 of
Auckland City				••	Mean Population.
Auckland and suburban boroughs	••	•••	•••	••	27.25
The average birth-rates for ten years, 1	902–11, a	re,			
Auckland City Auckland and suburban boroughs	••	• •	••		30.13
The set of the block of the set of the set of the set of the block of the set	••	••	· • •	••	28.12

The rate of Auckland City exhibits an apparent increase of 2.28 over the previous year, but this is partly discounted by reason of the mean population of Auckland City for 1910 being overestimated by 2,893. The rate in the suburbs (24.57) is a very low record, and the composition of our population as to age would produce results in favour of a higher birth-rate here.

	Death-rate.				P	er 1,000 of
Auckland City				1	Mear	Population.
Auckland and suburban boroughs	••	••	••	••	••	13.68
The external distillation in the	••	••	••	••	••	10.93
The average death-rate for the ten years, Auckland City	1902–11,	are,—				an a
Auckland and suburban boroughs	••	••	••	••	• •	12.86
These former the day of the	••	••	••	••	••	10.99

These figures, though actually correct, do not form a fair basis of comparison with other places. For instance, the death-rate for Auckland City, when corrected to the standard index of mortality, would exhibit a higher rate than should be expected, having regard to the rate for England and Wales in the same year being 14.6, and of London 15.8.

Natural Increase of Population.

		Births.	Deaths.	Natural Increase.	Increase per 1,000 of Mean
Auckland City Suburban boroughs	• •	1,225	558	667	Population. 16·3
Auckland and suburban boroughs	•••	$egin{array}{c} 1,044\ 2,269 \end{array}$	$\begin{array}{c} 352 \\ 910 \end{array}$	$\begin{array}{c} 692 \\ 1,359 \end{array}$	$\begin{array}{c} 16 \cdot 3 \\ 16 \cdot 3 \end{array}$

The natural increase thus shown is based upon practically an accurate enumeration of the population, and may best be compared with the figures for 1906, the census having been made in the two years 1906 and 1911.

The increases for ten years are (Auckland and suburban boroughs),---

C. CLIMATE AND METEOROLOGY.

43

(Being extracts from article in "New Zealand Official Year-book.")

[By D. C. BATES, Director, Meteorological Office, Wellington, New Zealand.]

The climate of New Zealand is to be considered in relation to four main features—(1) Its position, stretching for nearly a thousand miles southward of latitude 34° S.; (2) its insular condition, situated as it is in the widest ocean of the world from which no part of the country is distant more than seventy-five miles; (3) its physical features, mountain-chains running mostly north and south and affording different aspects; and (4) the weather-changes to which these parts of the earth are subject.

SUNSHINE.

The latitudes in which the chief cities of New Zealand lie in the Southern Hemisphere correspond with the cities in the North from which the possible amount of sunshine may be gauged. Auckland's latitude corresponds to that of Cape Passaro in the south of Sicily; Wellington to Naples; and Dunedin to Venice. The following table gives the period during which the sun is above the true horizon on the days of midsummer and midwinter:—

Possible Sunshine on the				At Auekland. Hr. min.	At Wellington. Hr. min.	At Dunedin. Hr. min.
Longest day	•••	••	• •	14 40	15 10	15 46
Longest day Shortest day	••	•••	••	9 38	9 13	8 39

The actual hours of bright sunshine recorded in Wellington average nearly six hours per day throughout the year, and few indeed are the days when a brilliant sun does not at some time or other score a definite trace upon the recording-chart. Other districts much more protected from cloudformation, as Nelson, in the Tasman Gulf; Napier, on the east coast of the North Island; and Lincoln, near Christchurch, on the east coast of the South Island, have higher records. Some of the west coast districts, on the other hand, record less bright sunshine; but Wellington, the capital city, is in the middle position, and affords a good mean both for the sunshine and the rainfall of the whole Dominion. Wellington is also in a critical position with regard to atmospheric disturbances, Cook Strait being usually the dividing-line between the cyclonic storms and westerly lows, generally partaking of the changes due to both. The actual results are as follows :---

Year.		Gisbo	rne.	Napi	er	Mouma	ihaki.	Wellin	gton.	Linco	oln.	Nels	on.
		Hr.	min.	Hr.	min.	Hr.	min.	Hr.	min.	Hr.	min.	Hr.	min.

Average	••	2120	57*	2511	40*	1864	15*	2104	01*	2168	11*	2547	09†

Hours of Sunshine.

These results bear comparison with some of the most favoured regions of the world, where, in order to produce the best results, sunshine and shower hold sway in turn. For instance, over the northern parts of the British Isles the annual average of bright sunshine is 1,200 hours, or 27 per cent. of the possible; and in the south it is 1,600 hours, or 36 per cent.; while Italy has averaged from 2,000 to 2,400 hours, or from 45 to 54 per cent. of the possible.

TEMPERATURE.

Latitude, insolation, proximity of the ocean, and the height of a locality are the determining factors with regard to temperature. The oceanic influences are recognized as the dominant feature with regard to both summer heat and winter cold, upon both of which they exercise a moderating effect. The west coast of the South Island especially is open to the prevailing westerly winds, and it is more humid and equable than the eastern coastal districts, which at times present an almost Continental type with considerable range of temperature. In the cities of Auckland and Wellington frosts on the grass are of rare occurrence, though further south and inland they are often experienced. Showing the influence of the ocean in moderating temperature, we may contrast the records of a Continental city with the capital city of Wellington.

H.- 31.

The meteorological seasons are regarded as later than the solar or astronomical seasons. Thus, in the Southern Hemisphere July is usually the coldest and wettest month of the year, while January is the driest and warmest. The seasons are thus roughly divided :---

> Winter-June, July, August. Spring-September, October, November. Summer-December, January, February. Autumn-March, April, May.

The following table gives seasonal and annual means computed from several stations in the various "provinces" into which the Dominion was once politically as well as naturally divided :----

						11 U

NEW ZEALAND RAINFALL, 1911.

As in 1910, so again in the year 1911, the rainfall was less than the average over the greater portion of New Zealand; but the difference was not to such an extent as to cause any great inconvenience to the farmer. Except in South Taranaki and in small scattered districts along the east coast, nearly the whole of the North Island shows a slight deficit. In the South Island the western and southern districts had below, but the whole of Canterbury, Nelson, and Marlborough, on the other hand, had considerably above, the average, portions of Canterbury along the coast having from 20 to as much as 99 per cent.

The following table shows the difference, above or below the mean, for each month in the year :---

Following on a somewhat dry December, the beginning of January, when precipitation was also lacking, caused some anxiety to the agriculturist, especially in the east coast districts of the South Island. After the 8th, however, this anxiety was relieved, for between this date and the 13th some copious downpours occurred on this coast, with the passage of a westerly low pressure across the country. Generally, the month of January was not visited by storms of any great intensity, cyclonic disturbances from northern latitudes not having developed for a longer period than usual, and westerly low pressures also showing a tendency to diminish.

February also showed a generally low rainfall, but the east coast and about Cook Strait had more rainfall than is usual in February, this being accounted for by the storms experienced being mostly confined to these districts, while the west coast of the South Island was only one-seventh the usual for this month, as there was an absence of westerly low pressure. Three disturbances of an extropical nature were in evidence, the centre of which passed through Cook Strait on two occasions, and once off East Cape. The most remarkable disturbance was a cyclone whose centre passed down the west coast of the North Island and through Cook Strait on the night of the 25th. This storm caused heavy rains and high winds over the North Island, the rainfall at Wellington for twenty-four hours—viz., 6.32 in.—being the greatest day's fall recorded for the fifty-four years since records had been taken.

March was a dry and fine month, the barometer being above the normal for the month in all parts of the Dominion, owing both to the absence of low-pressure systems of any extent, and to anti-cyclonic conditions holding sway over the greater part of the month.

April, on the other hand, was subject to frequent changes of atmospheric conditions. Extensive low-pressure areas from northern latitudes three times overspread the northern districts, bringing heavy rains in many parts of the North Island. No less than four westerly low-pressure areas passed southward of New Plymouth and Castlepoint, so that the rainfall was nearly everywhere above the average, but more especially over the North Island. Cloudy and foggy weather was much in evidence, but, on the other hand, owing to the prevailing winds being from warmer northern regions, the temperature was considerably above the average for this season of the year.

Owing to a monsoonal depression between the 1st and 4th of May, and an extropical disturbance whose centre passed to the eastward of East Cape on the 19th, the rainfall in this month was slightly in excess of the average in the northern and east coast districts of the North Island, but elsewhere it was less than the average. Three anti-cyclones of short duration passed over the Dominion, the highest barometer readings being recorded in the vicinity of Cook Strait on the 8th, 16th, and 23rd.

June was remarkable for two intense and extensive storm areas, one holding sway between the 7th and 13th, whose centre appeared to pass through Cook Strait on the 11th. Gales were frequent and widespread during this period, and most parts of the country reported one or more days of heavy rain. The second, a westerly "low," which passed in the south on the night of the 21st, brought northerly and westerly gales in its front and southerly gales in its rear. Snow fell at this time in the back country. The rainfall was in excess of the average in the northern districts and on the east coast districts of both Islands, but below the average on the west coast of the South Island.

July proved a fair mid-winter month, but with an unusual number of hard frosts both in the North and South Islands. Some heavy rain fell on the 10th, due to a cyclone from the west, and unsettled and boisterous conditions were experienced between the 20th and 26th during the passage of an extropical cyclone down the east coasts. The heaviest falls of rain occurred on the 24th, in Marlborough and Canterbury, many rivers in these districts fflooding the low-lying country through which they flowed.

In August very little rain fell, and Canterbury especially experienced one of the driest Augusts on record. A small portion of Hawke's Bay appeared to be the only district in the Dominion where a slight excess of the average took place. Except between the 4th and 9th, when abnormally high atmospheric pressure ruled, the barometer, though very unsteady, was nearly everywhere about the normal until the 30th, when a small westerly "low" passed to the southward. The beginning of September was ushered in with somewhat squally weather, especially on the

The beginning of September was ushered in with somewhat squally weather, especially on the west coast and southern district of the South Island, but anti-cyclonic conditions followed on the 5th, lasting until the 9th, when a westerly disturbance brought more unsettled weather, with rain on the west coast and in the southern districts. While the barometer rose rapidly in the South, it continued to fall in the North Island, with a cyclone of moderate intensity developing to the westward of this Island, and between the 14th and 15th considerable and general rain fell. On the 18th a cyclonic disturbance of remarkable intensity overspread the country, and its centre passed through Cook Strait on the evening of this date. During its passage across the Dominion stormy weather prevailed, with considerable rain, and some heavy snowfalls occurred inland in the South Island. The total fall for the month was below the mean throughout most of the North Island, and generally about the average in the South.

Anti-cyclonic conditions, with the usual accompanying fair weather, prevailed from the 1st to the 9th of October, but thereon to the end of December there was an almost total absence of welldeveloped atmospheric phenomena of this description.

On the other hand, westerly disturbances of the A-shaped depression and cyclonic types were frequent, and some of long duration. The result was a predominance of strong westerly winds generally, and an excess of rainfall in those districts having a westerly aspect. The most remarkable feature was the intense westerly "low" that enveloped the country on the 6th December, with a barometric pressure of 28.47 in. at the Bluff, which is the lowest reading ever recorded in New Zealand

Comparative Table : Year 1911.

PART II.

A. GENERAL REPORTS OF THE DISTRICT HEALTH OFFICERS FOR THE YEAR 1911.

AUCKLAND.

To the Chief Health Officer.

I have the honour to present the eleventh annual report for the Auckland Health District for the year 1911.

The work of the Department during the year 1912 was exceptionally heavy owing to the outbreak of plague in Auckland, the many epidemics among the Maoris, the transfer of Native-health supervision from the Native Department to the Health Department, and the inauguration of the new system of inspection whereby the Hospital Boards became sanitary authorities in charge of infectious out-The correspondence in connection with the latter item alone was very large, and, further, breaks. it entailed many trips to lay the scheme before the various Boards. Had it not been for the appoint-ment of an assistant so experienced in sanitary questions as Dr. H. G. H. Monk it would have been impossible to deal with the work. It has, however, been a useful year in many respects, and one which is marked by the establishment of several important reforms.

The change in the method of administering the clauses of the Public Health Act relating to infectious disease (section 5 of the Hospitals Amendment Act, 1910), the establishment of Inspectors in the several hospital districts, and the various negotiations and arrangements with Hospital Boards, all of whom (except the Waihi and Coromandel Boards) have delegated their powers thereunder to the Department for execution, the outbreak of plague, the various outbreaks of typhoid, &c., in Native settlements, and the very numerous orders made in relation to repair or removal or cleansing of insanitary buildings, have largely increased the work of the office, necessitating the employment of an additional typiste and a messenger.

Details of the office-work include: Letters outwards, 4,803; circular letters, 506; telegrams, 1,374; parcels, 48; 145 orders for admission to the infectious-disease hospital; 984 tubes of vaccine lymph were distributed to public vaccinators and medical practitioners; 324 accounts were made out in favour of medical practitioners for notifying infectious diseases.

Mr. Taylor has continued to have charge of the accounts of St. Helens Hospital as of those of the district office.

Appendices are attached giving tables and data upon the following matters : Notifiable infectious diseases, plague, provision for infectious diseases, water-supplies and sewage systems, sanitary con-dition of the Maoris. I have, &c., I have, &c.,

R. H. MAKGILL, M.D., D.P.H. District Health Officer.

NAPIER.

To the Chief Health Officer.

I have the honour to lay before you the annual report of the Borough of Napier Health District.

Infectious Diseases notified. - Scarlatina, 10; diphtheria, 15; enteric, 9; tuberculosis, 15; erysipelas and blood-poisoning, 2.

Dangerous Infectious Diseases .--- None under this heading, such as plague, leprosy, or small-pox. have occurred in this health district.

Provisions made for the Accommodation of those suffering from Infectious Diseases .- At the Napier Hospital there are isolation wards for the treatment of cases of diphtheria and scarlatina; also, in the same institution there are shelters provided for consumptive patients. On an island in the Inner Harbour, situated about four miles from Napier, is an isolated hospital for the reception of dangerous infectious diseases, such as plague, smallpox, &c.

Midwives Act .- No women have been suspended from practice.

Disinfection of Oversea Goods .--- Two packages of second-hand clothes ex "Indragari."

Water-supplies and Sewage Systems .-- Napier has a population of between nine and ten thousand. The water-supply is derived from artesian wells, and the water is pumped up on to the hills from a central pumping-station, and distributed by gravitation.

The sewage-disposal is by water-carriage. At present there are several outfall sewers, the main one being into the Tutaekuri River, others into the Inner Harbour and the open sea. The improvements in the drainage scheme suggested by Mr. Midgley Taylor some years ago are now being given This system provides for main and intercepting sewers combined with a central pumpingeffect to. station and ejector-tanks. The sewage is to be carried to a large receiving-tank near the western pier, where it will be released at ebb tide. The works are being carried out in such a manner as to allow of considerable improvements being made in the gradients of all the contributing sewers, which are being relaid more in accord with modern views. The collection of all sewage towards one outfall into the open sea, where it will be subject to a swift tide race which will carry it out to sea expeditiously, is also a very great advantage.

Tenders have been accepted by the Council for the work in connection with a refuse-destructor. Sanitary Inspections.—These have already been sent in under the heading of the Hawke's Bay Hospital District as a whole, so it appears superfluous to duplicate them here.

Section 83, Hospital and Charitable Institutions Act, 1909.-The Napier Borough, having a population of over nine thousand, and its own staff dealing with sanitation, this section would appear inapplicable.

Section 5, Charitable and Hospitals Institutions Amendment Act, 1910, has been given effect to by the Napier Borough Council.

Legal Proceedings in Sanitary Matters .- These have been compiled by Inspector Gardiner, and are enclosed on separate sheets.

No modifications or improvements have been made in the borough by-laws during the year.

Medical Inspection of School-children. - One inspection of the children of the Catholic school with reference to an outbreak of diphtheria was made.

Insanitary Buildings.-Buildings wholly condemned, 15; condemned pending repairs being effected, 50; buildings pulled down, 9; buildings condemned and now unoccupied, 5; buildings repaired as requisitioned, 27.

The number of deaths registered in the Napier office for 1911 were 435, but all of these did not occur in the borough, as deaths occurring in Napier South, Greenmeadows, Taradale, and Clive are registered in Napier. One death was registered from blood-poisoning, one from hydatids, and fourteen from cancer.

Napier continues to be one of the cleanest towns in Australasia ; other towns may equal it in this respect, but I believe that none excel it. This, coupled with the fact that it enjoys a large proportion of possible sunshine (2,600 hours on an average per annum), makes it a healthy place of residence, and accounts for its low death-rate.

During the year Mr. F. B. Gardiner took over the duties of Sanitary Inspector for the Hawke's Bay Hospital District. I am glad to be able to place on record that I have found him capable, I have, &c., conscientious, energetic, and tactful.

FRED DE LISLE, L.R.C.P., D.P.H.,

District Health Officer.

Wellington, Hawke's Bay, Nelson, and Marlborough.

To the Chief Health Officer.

During the year the various Hospital Boards in the district took over the work of controlling infectious disease imposed upon them by section 5 of the Hospitals and Charitable Institutions Amendment Act, 1910, and appointed Inspectors for that purpose: To Waiapu, Inspector Terry was appointed, having been transferred from the Mental Hospital's Department; to Hawke's Bay, Inspector Gardiner was transferred from Stratford ; to Wairarapa North, Inspector Cairns was transferred from Masterton Borough; to Wairarapa South, Inspector Miller (previously the Department's Inspector in that district); to Wellington, Inspectors Reed and York appointed; to Palmerston North, Inspector O'Brien, formerly Department's Inspector in that district; to Wanganui, Inspector Pargeter; to Hawera-Stratford, Inspector Gray, from Wellington; to Taranaki, Inspector Kendall, formerly Borough Engineer, New Plymouth; to Wairau-Picton, Inspector Johnston, formerly departmental Inspector in that district.

No appointments have been made in the Cook, Waipawa, Patea, Nelson, or Buller Hospital Districts; but before the end of the year the Cook Hospital Board were taking steps to fill the position.

During the year Wairoa ceased to be a portion of the Hawke's Bay District, and became a separate hospital district, and, unfortunately, has since been without an Inspector. It is hoped that an appointment will soon be made.

In many districts arrangements have been made, under section 94 of the Public Health Act, between the Hospital Board and the various local authorities within its boundaries, whereby the Hospital Board's Inspector has been also made Sanitary Inspector (Inspector of Nuisances) for the local authorities concerned, thus at small cost providing efficient inspection by a properly-trained Inspector in localities where the local authority could not afford to provide such service by itself, and at the same time relieving the Hospital Board of part of its burden.

Section 83 of the Hospitals and Charitable Institutions Act has not been taken advantage of in the district, though in one instance negotiations are in progress.

Chief Inspector Schauer and Inspector Wilson are both retained by the Department for special work, the latter being also Inspector for several local bodies in the Rangitikei County.

It is to be noted with regret from the year's vital statistics that, although the general death-rate of Wellington is lower than any of the chief centres, the infantile death-rate is still considerably higher. The death-rate of children under five is also high. This points to some local conditions especially affecting the very young, and of these the milk-supply is naturally the most important, this forming the greater portion of the natural food at these ages.

That the milk-supply is not satisfactory is well known, and is borne out by the number of warning letters and prosecutions rendered necessary after analysis of samples taken. This Department has systematically taken samples from all parts of the city, and where necessary action has been taken; but, unfortunately, the fines imposed have been so low as to make it almost pay a vendor to run the risk—at any rate, the result of prosecution does not seem to have materially improved the supply. The Health Committee of the City Council is now considering a new proposal by which it is hoped the Council may be able to ensure the provision of a good milk-supply, at least, so far as infants and young children are concerned. The carriage and storage of milk are very important items, both in the vendor's distributing depot and in the home, and I regret to say that faults apparently exist in both, so that should the former become perfect, it still remains to educate the public as to the necessity for the greatest care in cleanliness of household untensils and the selection of a suitable place to keep this sensitive and readily decomposable food. As regards the vendors, it seems incredible that, knowing that human life is dependent on a healthy supply of milk, persons, for the sake of greedy gain, should tamper with this article.

In addition to the notifiable infectious diseases, measles has been very prevalent, and has principally affected children of school-age. Great carelessness is apparent with regard to precautions taken to prevent spread; there is too great a tendency to look upon this as a childish complaint from which all children must suffer. From the vital statistics it will be noted that nine children have succumbed to this disease in Wellington and the suburban boroughs, and it is impossible to estimate the number who are suffering from or have succumbed to sequelæ.

There seems to be a great tendency amongst school-teachers to permit the return to school of pupils absent from this disease too soon after recovery and before danger of infection has ceased, and I have deemed it necessary in a few instances to call the attention of Education Boards to this when they have applied for the 10-per-cent. certificate. The reason appears to be the system of remuneration of school-teachers on the attendance basis, and consequently anything which appears to them to cause a reduction in attendance is not favoured.

Remarks in connection with notifiable infectious diseases are attached to the appendix on that subject.

Works in connection with new sewerage schemes are in progress at Marton, Gisborne, Hastings, and Woodville, and it is proposed to extend the existing schemes at Feilding and Wanganui.

Blenheim, Mangaweka, Westport, and Waitara propose installing new schemes of sewerage. A poll of ratepayers has been taken at Blenheim, and definite schemes are being considered. At Mangaweka a scheme has been approved, and is being put into operation.

New water-supply works are being installed in connection with the sewerage scheme at Mangaweka. At Blenheim it is proposed to install a public water-supply, and this is being considered in conjunction with the sewerage scheme. Marton is also installing a new supply.

At Wellington a new dam has been completed at Wainuiomata, which will greatly improve the city supply.

With regard to dangerous infectious diseases, none having occurred in the district during the year, I have not made out an appendix for this. The only case regarding which any suspicion arose was one brought under notice by the medical attendant on account of slight pustular skin trouble having arisen.

Attached hereto are appendices, being tables and data upon the following matters relating to this district: Notifiable infectious diseases, arranged in geographical order of hospital districts, with counties, boroughs, and town districts contained therein; provision for infectious diseases; Midwives Act; disinfection of oversea goods; water-supplies and sewage-disposal; sanitary inspections; special inspections by District Health Officer; special reports by District Health Officer; sanitary condition of Native race; legal proceedings; by-laws; quarantine; immigration restriction; Sale of Food and Drugs Act; legal proceedings under Sale of Food and Drugs Act.

HERBERT CHESSON, M.R.C.S. (Eng.), D.P.H. (Lond.), &c.,

District Health Officer.

CANTERBURY AND WESTLAND.

To the Chief Health Officer.

I have the honour to submit the following report for this district for the year ending 31st December, 1911.

The district under my charge now comprises the whole of the South Island except the District of Marlborough and of that portion of Nelson north of Inangahua County.

Dr. Champtaloup is still responsible for the administration of the Public Health Act in regard to infectious diseases in the Otago District, but the administration of the district in respect to general sanitary matters was handed over to me shortly before the end of the year. Dr. Champtaloup is reporting on this district for this year.

The most important work of the year has been the entire reorganization of the administration of the Public Health Act rendered necessary by the provisions of the Hospitals and Charitable Institutions Act, 1909, and its Amendment, 1910, which gave the Hospital and Charitable Aid Boards entirely new powers under the Public Health Act. This change has caused a greater advance to be made in this district in the administration of public-health matters than has taken place since the passing of the Public Health Act and the institution of the Health Department.

The Hospital Boards, with the exception of Westland, accepted and carried out my recommendations with regard to the appointment of Inspectors and the carrying-out of their duties. I owe the Hospital Boards many thanks for co-operating so willingly with the Department in this matter.

With one exception, whose period of office was very short, these appointments have, I believe, been entirely satisfactory to the Boards; and I think the Boards and the Department are to be congratulated on having been able to obtain as Inspectors an exceptionally good lot of men, who carry on their duties with tact and enthusiasm. Some of these Inspectors are proving very "handy" men, as in addition to their routine duties, they have been able to assist the Boards in matters of heating, lighting, and drainage of institutions under the control of the Board. More use might be made of them in some districts in inquiring into the circumstances of persons in receipt of charitable aid, or who are indebted to the Board for Hospital treatment.

The dual control of the Inspectors by the Hospital Boards and the Department, which might have been given as a theoretical objection to the scheme, has not as yet given rise to any friction, and, although no hard-and-fast rules are laid down on the matter, any difficulty in this way, may, I hope, continue to be an imaginary one.

In carrying out this reorganization I received invaluable assistance from Miss Symes, as clerk, in rearranging files and dealing with the increased correspondence with local bodies. Miss Symes, who

7—H. 31.

has been in this office since its commencement, has now, for private reasons, permanently severed her connection with the Department. After an interval a satisfactory substitute has been found in Miss E. L. Rowe.

To secure instruction for Sanitary Inspectors a class for Inspectors of Nuisances was at my request arranged for by the Technical College in Christchurch, and was attended by twenty-six students. lectures and practical demonstrations were given by Inspector Kershaw and myself. An examination by the New Zealand Branch of the Royal Sanitary Institute was held in Christchurch in December. It is to be hoped that now facilities are given for the obtaining of this certificate local bodies will only appoint persons holding this certificate as Inspectors for full-time appointments.

Inspector Kershaw has given great assistance in training Inspectors who have been temporarily attached to this office before being permanently appointed to hospital districts : he has also assisted in the compilation of by-laws for local bodies.

Inspector Middleton has been attached to this office for special work since leaving the West Coast in July. He was at first fully occupied in seeing to the enforcement of the Plague Regulations and in carrying out special inspections. After Miss Symes left he assisted in the office in keeping going the office routine until Miss Rowe was appointed and became accustomed to the office routine.

the once routine unth miss nowe was appointed and became accustomed to the once routine. I attach herewith appendices dealing with the following matters: Notifiable infectious diseases; dangerous infectious diseases; provision for infectious diseases; private hospitals and midwives; water-supplies, &c.; sanitary inspections, with Inspector's returns; special inspections; insanitary buildings; special reports; sanitary condition of Native race; instruction for Sanitary Inspectors; by-laws; Quarantine Immigration Restriction Act; Sale of Food and Drugs Act, with table of network and local proceedings; offensive trades returns and legal proceedings; offensive trades.

I have, &c.,

H. E. FINCH, M.B., B.S., D.P.H., District Health Officer.

Otago.

To the Chief Health Officer.

Since the Department issued complete sets of outfits in which to forward specimens to the laboratories for report considerable advantage has been taken by medical practitioners of the facilities Still, however, a number of practitioners will not take the trouble to forward specimens to confirm their diagnosis in diphtheria, typhoid-fever, and pulmonary tuberculosis, and on several afforded. occasions the Hospital Board has been put to the expense of sending Inspectors long journeys to investigate or disinfect in cases which have turned out to be incorrectly diagnosed. We have made it a practice now, however, to request material for laboratory diagnosis in all cases where these infectious diseases are notified without the diagnosis being confirmed.

The notification of hydatids has almost fallen into abeyance, and it would be well if the medical profession were circularized drawing their attention to the fact. The public-health aspects require attention in this district, but no scheme could be complete without a survey of its incidence on the whole Dominion.

As I have previously pointed out, School Committees and headmasters are far too prone to close their schools when an epidemic of infectious disease appears amongst the scholars. In some cases this school closure is quite unnecessary and can serve no useful purpose.

On two occasions during the year I consulted with the Christchurch Hospital Board concerning The Board has now very wisely made the appointment of a Clinical Pathologist and Bacteriologist. a full-time appointment, and in Dr. Pearson, who is shortly to take up his duties, the Canterbury District has secured the services of an energetic and capable officer.

Owing to the limited opportunities which the Inspectors in any one centre have of furthering their experience, it might be advisable to interchange Inspectors for a few weeks every two or three years, or even to send them in turn to Sydney or Melbourne.

Regarding the instruction of medical practitioners in the more recent methods of therepeutic immunization such as bacterial vaccines, tuberculins, sera, &c., owing to the difficulty which medical practitioners experience in getting away for post-graduate instruction, it might be well if the departmental bacteriologists organized some scheme of instruction in their districts at central places. Small outfits could be carried, and instruction given by arrangement in the more simple laboratory methods of diagnosis and treatment, and in the modern uses of bacterial vaccines, sera, tuberculins, &c. Such instruction would, I have no doubt, be welcome to the practitioners, and indirectly of great good to the community.

The scope of the work covered by the laboratory continues to enlarge, but all purely pathological material is examined in Professor Roberts's laboratory, and is not included in the attached report.

A growing feature of the work, and one which I think should be encouraged, is the correspondence passing between medical practitioners and the laboratory in the matter of diagnosis and treatment by tuberculins, bacterial vaccines, and sera. It is our aim to have available the most recent information on these subjects, and to advise those seeking our help.

I think the time has come when the Department should make arrangement for the manufacture and supply locally of the more commonly used bacterial vaccines and tuberculins. Numerous requests are received for freshly prepared material, and until the matter is put on a proper footing we cannot cope with them.

Owing to the want of space in the rooms available, new laboratories in the Dunedin Hospital buildings were equipped during July of this year. The new accommodation consists of a large general laboratory, culture media room, centrifuge room, work-room, and waiting-room for patients, and practical class-room to accommodate eighteen students.

There are branches of the laboratory work bearing on public-health questions which ought to be undertaken, but which we cannot face without increased assistance and accommodation. instance, only one sample of milk was received for detection of tubercle, whereas, under the Sale of For Food and Drugs Act, the Department should be responsible for the examination of the milk as delivered in Dunedin from over three hundred dairymen.

Owing to the increased demand on my time for University, Hospital, and Laboratory appointments, towards the end of the year you relieved me of the administrative control of my district, that duty being taken over by Dr. Finch. This enables me to devote more time to the scientific branches of the departmental work.

Inspector Cameron, who was until recently stationed at Invercargill, has been promoted to Dunedin, and from here undertakes such departmental work in the Otago Province which does not fall within the duties of the Hospital Board's Inspectors. In January, James Craighead, and in April, W. M. Armour, were appointed Sanitary Inspectors by the Hospital Board, and have discharged their duties faithfully and well during the year.

During the year my laboratory assistant, Mr. Andrew Logan, has yielded faithful service, and during my enforced absence from work during two months of the year the greater part of the work was efficiently and satisfactorily carried out under his supervision.

I have likewise to thank my colleagues on the University and Hospital staffs for their cooperation and advice.

Appended hereto is a detailed laboratory report, and tables and data relating to other matters.

I have, &c.,

SYDNEY T. CHAMPTALOUP, M.B., Ch.B., B.Sc. (P.H.).

B. APPENDICES TO THE REPORTS OF THE DISTRICT HEALTH OFFICERS FOR THE YEAR 1911.

INFECTIOUS DISEASES.

The diseases declared to be infectious diseases in the meaning of the Public Health Act, and consequently notifiable, are as follows : Scarlet fever, scarlatina, diphtheria, enteric fever, tuberculosis, puerperal fever (including milk-fever, sapræmia, acute sepsis, septicæmia), plague, smallpox, leprosy, cholera, actinomycosis, hydatids, beri-beri, blood-poisoning, cerebro-spinal meningitis (including cerebro-spinal fover, cerebral typhus, spotted fever, petechial fever, malignant purpuric fever), typhus fever

The following table shows the number of cases of infectious disease notified throughout the Dominion :-

			i		Health]	District.

General.

Dr. Makgill (Auckland) reports :---

The notification of infectious disease, though 471 fewer than in 1910, are still some couple of hundred in excess of the normal number, the excess being accounted for by the tardy abatement of the scarlet-fever epidemic in 1910, and by the somewhat heavy record of enteric fever, but which increase occurred in country districts, and of which the Maori epidemics, referred to in another place, account for 85 of the 194 recorded in country districts. The total number of notifications is 1,176.

Dr. Finch (Canterbury) reports :---

As the Hospital and Charitable Aid Board were constituted the local authority for the purpose of the Public Health Act, so far as it relates to the prevention of infectious disease by section 5 of the Hospital and Charitable Institutions Amendment Act, 1910, a considerable amount of time was occupied in interviewing Hospital Boards and arranging for the appointment of suitable Inspectors to carry out the duties in relation to the prevention of infectious diseases. These arrangements were practically completed by the 1st April, 1911, so that the Hospital Boards were able to take over these duties throughout the district on that date. There is no doubt that this arrangement has been extremely useful and beneficial, as now practically every case of infectious disease notified is promptly investigated, and arrangements made for removal to hospital or isolation at home.

Now that sufficient Inspectors are available in different parts of the district it is possible to make the routine of investigations and precautionary measures more complete.

The Hospital Boards have now direct knowledge of the number of infectious diseases in their district, whereas before they were only acquainted with the number that were removed to the infectious-diseases hospital under their control.

Dr. Champtaloup (Otago) reports :---

An outstanding feature of the infectious diseases generally in this district is the mild character of the attacks in the great majority of cases, which is in marked contrast to what pertains in the Old Country.

Three cases of cerebro-spinal meningitis, all fatal, occurred in the district during the year. Two of the cases were admitted to the Dunedin Hospital, where a complete bacteriological investigation was made, and the meningococcus found in the cerebro-spinal fluid. No cause could be detected, and none of the patients or contacts had been out of this country.

In view of the recent epidemic of acute poliomyelitis in the Old Country, in some cases confused with cerebro-spinal meningitis, it is interesting to note that there were two cases, both fatal, in the Otago Hospital District during the year. No connection could be traced between the two. The cerebro-spinal fluid appeared sterile to all laboratory investigation. The pathological finding was that of an acute ascending myelitis resembling Landry's paralysis.

Scarlet Fever.

Dr. Makgill (Auckland) reports :---The cases notified from the health district during the last five years

			HOWLER	ansun	or aumg	, une tasu	nve	years	are,

The monthly returns show that during the earlier part of the year we still were suffering from the general epidemic of scarlet fever which started in March of the previous year. Subsequent to June the notifications fell to one-half those received during the six months previous, and now the epidemic seems to be well under control. Town and country seem to have suffered alike, only the most isolated districts escaping. Again it is satisfactory to record the mildness of type, since no deaths are recorded as from scarlet fever.

Dr. Chesson (Wellington) reports :---

The total number of reported cases for this year--viz., 1,061--shows a marked increase on that of last year, which was only 443. The epidemic has affected the whole district, but naturally the greater number of cases have occurred in the more densely populated centres. The outbreak has, fortunately, been of a very mild nature--so much so that many cases have escaped observation until in the peeling stage, and there can be little doubt that a great number have escaped observation altogether; and this no doubt accounts for the extent of spread, the unrecognized cases having, of course, continued to mix with other children. Many cases have also been diagnosed by parents and others as measles, and, having received no medical attention, have not been isolated until some officer of this Department or of the Hospital Boards has noticed suspicious symptons, and has either brought the case under my notice or obtained an outside medical opinion. Following on a report from Inspector Wilson, I visited Turakina and there discovered five cases of undoubted scarlet fever previously unrecognized, one being a fruit and sweetstuff vendor.

The outbreak was at its height in May, having gradually increased during the preceding months and declined equally gradually during the latter months of the year.

Dr. Finch (Canterbury) reports :---

A widespread outbreak of scarlet fever commenced in April and continued in most of the districts until the end of the year. In North Canterbury it was chiefly confined to Christchurch and suburbs, and in South Canterbury to Timaru; whereas in Ashburton and Southland there were more cases in the country districts than in the towns of Ashburton and Invercargill.

The last epidemic of scarlet fever in Christchurch occurred in 1903 and 1904, in which years there were respectively 433 and 453 cases notified in Christchurch and suburbs; whereas this year there were 338 cases. There will not presumably be another epidemic for about another five years.

The epidemic was of a mild type with a few exceptions, and there were only two fatal cases in

Canterbury and none elsewhere.

Dr. Champtaloup (Otago) reports :----

In March and April an outbreak of a mild type occurred at Beaumont. A similar outbreak occurred at Green Island in November and December, and was traced to three mild cases which were not diagnosed until the stage of desquamation. Only one death occurred in the district out of 229 cases notified.

Diphtheria.

Diphtheria was, unfortunately, again above the average incidence, though somewhat lower than in 1910. The monthly returns show that in April, May, June, and July the cases were most frequent. The first three of these were very wet cold months. With the warmer drier weather in early spring the incidence declined. There was no very definite epidemic, but cases were fairly evenly distributed over town and country districts. The outlying suburbs of Auckland escaped fairly well, but among the more populous suburban boroughs cases were frequent, Mount Eden Borough especially suffering. It is probable that lack of drainage facilities and the consequent continued pollution of the soil near

the houses has much influence in spreading diphtheria. Of the country districts the Waikato suffered most severely, Cambridge Borough alone escaping lightly. No cases occurred in Te Aroha, which is now well drained. On the other hand, in Waihi,

which has no drainage facilities, 14 cases were notified. The mortality was again low throughout, only six deaths from diphtheria being recorded.

The incidence of this disease is slightly less than last year—viz., 322, as against 341. Only five deaths have been recorded—1.55 per cent. Of the total number of cases, Wellington City contributed 143, other large centres-viz., the Boroughs of Napier, Wanganui, and Palmerston North-contributing a further 47 cases, the remainder of the cases being spread in a more or less isolated manner over the

country districts, the only county at all badly affected being Wanganui, with 11. As far as monthly incidence is concerned, this appears to have been fairly evenly distributed, with slight increase between the months of May and September.

There has been a considerable increase in the cases of diphtheria in both Christchurch and Timaru. In Christchurch City there was one death, but there were six fatal cases from the country dis-There was an epidemic of a mild type in Gore without any deaths occurring.

tricts.

An outbreak occurred during April and May in the Kaikorai district of Roslyn, which was traced to Dr. Champtaloup (Otago) reports :----An outpreak occurred during apin and may in the Renkolat district of Rosayin, when was traced to a fatal case primarily diagnosed as quinsy. Though confined to a small area, considerable difficulty was experienced in stamping out this outbreak, partly owing to the insanitary condition of the area in question. Diphtheria is endemic in the Kaikorai district, and will not be satisfactorily controlled till the drainage scheme which is in contemplation is completed.

Enteric Fever.

Dr. Makgill	(Aucklar	nd) reports	i : Jod the	roughout	the health	district f	or the past	five years are : . 197	
The cases of	enteric i	ever record	teu m	193	1910			197	
1907		••	• •	100	1911			346	
1908		• •	• •	391	1011				
1909	•••	••	• •	206			of 149 ove	r the previous vea	ar,

The somewhat heavy record of enteric fever, showing an increase of 149 over the is largely attributed to the outbreaks in various Native settlements and the European contacts there-with. This is shown best as follows :--

City and suburban cases	 		•••	$100 \\ 02$	$\frac{110}{231}$	•139	
Rural districts	 • •	••	•••	92		Dinia Ah	ir

Of these 139 cases, we can attribute many to the outbreaks in Native camps at Ripia, Ahipara, and Kawhia. Considerable epidemics among Maoris were notified from Te Puke and Ohinemuri in the autumn, while 11 cases occurred in a Native bushfelling camp near Rotorua in November and December. The outbreak at Ahipara was exceptionally severe, some 35 cases being known, while many others had either died or recovered before we were made aware of the existence of the disease. In the Northern Wairoa district 24 Native cases were notified, and doubtless many others also occurred of which we knew nothing. At both these places it was found necessary to organize temporary hospitals for the treatment of these cases owing to the isolation and the number to be dealt with ; while, again, at Kawhia this was done in a smaller epidemic owing to the impossibility of getting the cases to the Waikato Hospital. It is probable that quite a third of the cases notified during the year were Maoris. Among the European population, therefore, there was no very alarming increase, and the high figures for the year can in part be attributed to the fact that the Health Department has taken over the administration of the Native medical service, and consequently there is now some systematic investigation into the sanitary condition of these people. A number of cases which were formerly ignored are therefore now being notified.

Apart from this, typhoid was prevalent in the district, especially during the first four months of the year. An examination of the meteorological table shows that the first three months were exceptionally dry, and doubtless this had the effect of increasing the typhoid rate. The heavy rainfall in April and May appeared to check the disease, but the very dry winter was followed in spring by a recrudescence of the disease. It is interesting to note that in spite of the generally high incidence Auckland City had only 58 cases, or one less than last year. In the suburban boroughs, however, there were 35 cases, compared with 14 the previous year, Mount Eden and Mount Albert suffering most severely. Onehunga had but 1 case, possibly a result of the thorough cleansing which was necessitated by the appearance of plague there early in the year. Rotorua and Thames Counties and Waihi Borough suffered severely largely owing to the Native element. In the Boroughs of Cambridge, Te Aroha, and Whangarei no cases were notified.

The accompanying chart shows the relation of temperature, rainfall, and typhoid so far as Auckland and the suburban boroughs and road districts are concerned.

The thin typhoid line exhibits the average monthly cases during five years, 1906-10.

Dr. Chesson (Wellington) reports :----

There have been more cases this year-viz., 357, as against 233 last year.

An epidemic of somewhat serious proportion occurred in the Waiapu and Cook Hospital Districts, the former having 100 and the latter 123 reported cases. This was chiefly confined to the Maori population, and was due to the habits and insanitary surroundings of the Maoris as regards their habitations and total disregard of ordinary care and cleanliness. In Waiapu, where, on the advice of the Department, active measures were taken by the Hospital Board—isolation camps being established and an Inspector appointed to carry out measures of isolation, disinfection, &c.—the disease was speedily reduced from 35 cases in April to 8 in the two following months, and gradually down to only 1 in October and 2 in November and December, and at the time of writing this report there are no cases in that district.

I regret having to point out that in the neighbouring district of Cook—where at no time did the total cases in one month equal those in Waiapu—the disease still kept up, and in December 19 cases were reported. Since then, however, an Inspector has been appointed, and active measures put into operation.

Another outbreak occurred in the Taranaki District, but did not assume such large proportions, and was speedily checked by active measures. Hawke's Bay, Wairoa, Wanganui, and Wellington

9---H. 31.

were also affected to a lesser extent. A series of cases at Eketahuna amongst Europeans was traced to a convalescent from Masterton visiting a boardinghouse and sleeping with his brother while there. As regards this disease amongst the Maoris, there is no doubt that the appointment of the nurses for Maoris will tend to bring to light cases in their early stages, and thus check further infection.

Dr. Finch (Canterbury) reports :---

There were 28 cases of typhoid fever notified in the North Canterbury Hospital District, including 18 in Christchurch, a larger number than usual, but there were no fatal cases.

In the Vincent Hospital District there were 12 cases, including 5 in Alexandra. There was 1 fatal case from the Vincent County.

As most of the cases were employed on dredges, and possibly got the infection from drinking water from the Molyneux River, placards were this year posted on the dredges and in public places in the district warning persons not to drink water from the Molyneux River or its tributaries.

Dr. Champtaloup (Otago) reports :—

Sixteen cases occurred in the district during the year, 1 being fatal. Medical practitioners in the affected areas have been advised of the advantage of prophylactic inoculation against typhoid fever, and several have availed themselves of the facilities which the Department has offered, and have inoculated those in their charge who are most likely to be exposed to the infection. The risks which members of the nursing profession run in nursing enteric cases in hospital and elsewhere have been pointed out, and in the Dunedin Hospital 16 of the nurses attached to the enteric wards offered themselves for prophylactic injection.

Tuberculosis.

Dr. Makgill	l (Aucklar	nd) reports	· :						
The cases r	notified fr	om the he	alth di	strict in	the last five	years are,—	-		1.97

					1. A. M. M. A. M. M. A. M. M. A. M.				

Dr. Chesson (Wellington) reports :---

The increase in reported cases—from 199 last year to 278 this year—is probably due in a large measure to a greater proportion of the cases coming under the observation of medical practitioners being notified by them than has previously been the case.

Dr. Finch (Canterbury) reports :--

The notification of tuberculosis continues to be very unsatisfactory, especially as far as the notification of the earlier cases are concerned. It is to be hoped that a tuberculosis dispensary will be started in Christchurch during this year. There is a great need for the person who is in the early stages of tuberculosis to be given every encouragement to present himself for examination to a medical man or at the dispensary.

Dr. Champtaloup (Otago) reports :---

One hundred and thirty-four cases have been notified, with 84 deaths. Last year 138 cases were notified, and 107 deaths. No comparison can be made, however, as last year's figures include the whole of Otago and Southland.

During the year a tuberculosis dispensary was started in connection with the bacterial vaccine out-patient department of the Hospital, and a nurse was trained at the Palmerston Sanatorium to undertake the investigation of all cases attending the dispensary. Until, however, a permanent medical officer is appointed at the Palmerston Sanatorium, who shall control all cases of tuberculosis in the Otago Hospital District, and attend to the work of the dispensary, no great good can come from this movement.

A much-felt want has been supplied by the Hospital Board in providing shelters in the Hospital ground for cases of pulmonary tuberculosis which are too advanced to be sent to the Palmerston Šanatorium.

Blood-poisoning and Puerperal Fevers.

Dr. Chesson (Wellington) reports :---

The incidence of puerperal fever shows very little change from last year-34, as against 35.

Dr. Champtaloup (Otago) reports :---

Three cases of puerperal septicæmia were notified, with 2 deaths. Nine cases of erysipelas were notified, with 1 death.

Hydatids.

Dr. Champtaloup (Otago) reports :---

Four cases were notified during the year.

An unusual number of cases of this disease come from that portion of South Dunedin supplied from the Silverstream Reservoir. The water-supply is brought from the gathering-ground to the reservoir in an open water-race, and is liable to animal pollution. On various occasions analyses of this watersupply have been made, and its inferior quality pointed out to the Corporation.

An investigation of all cases of hydatids which have been under treatment at the Dunedin Hospital for the last twenty years is now in progress, with a view to determining the factors concerned in the incidence of this disease.

DANGEROUS INFECTIOUS DISEASES.

The infectious diseases declared to be dangerous infectious diseases in the meaning of the Public Health Act are : Plague, smallpox, leprosy, and cholera.

Plague.

Dr. Makgill (Auckland) reports :--

The past year has been a memorable one in Auckland, in that we have had the first indication of anything approaching to an epidemic of plague. In previous years we have never had more than two or three cases; this year there were 8, 3 of which came from the outlying suburb of Onehunga, indicating a wider spread of the infection than heretofore.

The outbreaks in previous years are shown thus :---

04.000	COMIN III	proveduo	Jours a.	II UIL	as.

1906	••	••	••	 0						

The last evidence of plague had been a case in the city, reported on the 8th June, 1910, and during the next nine months no infection was discovered in human beings or in rats. During this period of immunity it is to be feared that the precautions in the city had been relaxed to a great extent, although some poisoning was carried on by both City Council and Harbour Board.

Infection among Human Beings.—In February we issued a circular to the harbour and shipping authorities asking for a renewal of precautions against rat-infestation, and this matter was also brought to the notice of the City Council. This action was justified when a month later, on the 20th March, Dr. Scott, of Onehunga, reported a suspicious case in a woman in charge of a fruit-shop in that suburb. She was at once removed to the observation ward at the Hospital, and as there was no doubt as to the diagnosis, immediate precautions were taken at the fruit-shop, which was closed to the public and thoroughly disinfected. On inspection next day I found it to be a dilapidated and insanitary building, much infested by rats. The patient also gave a history of finding dead rats among some rubbish at the back of the shop a few days before her illness. Owing to the insanitary condition of the building I signed a certificate of condemnation, and it was subsequently pulled down on the order of the Magistrate. It seemed probable that the infection had been introduced from the wholesale fruit-stores in the city from which cases of fruit were daily carted, therefore at our request the Council began a systematic inspection and cleansing of these stores, in many of which the fruit was kept in very insanitary cellars about the lower parts of the city, in the neighbourhood of which most of the cases had been traced in previous years.

On the 22nd March, two days after the first case was reported, we were notified of two other suspects — the husband of the first case, and their assistant in the shop. They were removed to hospital, where, in the latter case, the disease developed as one of the pneumonic type, and, in spite of due precautions, one of the nurses who attended him also developed pneumonic plague four days after his death on the 29th March. Fortunately, in the nurse's case the disease was of a less acute type, recovery taking place after a very severe illness, while the infection spread no further among the nursing staff.

The fifth case was reported on the 30th March, the patient being a boy working in a bottlingstore in Customs Street, City, in the centre of the plague area. In this case, as in all others, the history showed the presence of mortality among rats, the boy having handled two dead rats found in the cellar of the store. This cellar was itself in a very satisfactory sanitary state, and not greatly rat-infested, but it was found that rats could gain access to the building through various openings, and doubtless the infected ones had come there when ill to take refuge. Ordinary cleansing and disinfection of these premises was deemed sufficient, and the place was not closed down.

During April no further cases were reported, but on the 3rd May Dr. Harke reported a sixth case, the patient again living at Onehunga. On inquiry, however, it was found that he worked in a large warehouse in the city, and as the same evening Dr. Frost reported a seventh case, the suspect also being an employee in this warehouse, and living in Mount Eden, it seemed probable that the infection was received not at their homes but at the place of work. This warehouse, while in an excellent sanitary condition, was subject to invasion by rats during wet weather, when they were driven from the sewers, and, as usual, there was a history of mortality among these rats shortly before these cases developed. During the cleansing precautions at the warehouse dead rats were found in the linings of part of the buildings, but too decomposed to enable diagnosis to be made. Further evidence that infection arose at this warehouse was received when on the 8th May Dr. Murray reported the eighth case, the patient being a boy employed as a gasfitter on these premises. The diagnosis here was long delayed owing to peculiar complications, but it ultimately proved to be undoubtedly an infection by *pestis bubonicus*. A fourth employee at this warehouse was reported on the 10th May as suffering from suspicious symptoms—namely, a bubo with some febrile disturbance. A bacteriological investigation by Dr. Monk of the fluid drawn by an aspirating-needle from the bubo, however, proved negative, and as the symptoms rapidly cleared up the case was not considered to be one of plague. The warehouse was a large one, employing over a hundred hands, and the question of closing it during cleansing was a serious one. The building was not permanently infested by rats, and it was considered probable that, as in the case of the bottling-store, the outbreak was due to the chance access of infected rats from an old sewer below the building. The flooding of this sewer a few days before had caused trouble, and rats had been at that time driven to take refuge in the basement. In view of this, and the excellent general sanitary state of the place, and the result justified this attitude, for no cases arose among those working in or visiting the warehouse subsequent to its disinfection.

As usual, a large number of suspected cases required investigation, most of which were readily proved to be conditions other than plague. Two, however, must be regarded as suspicious, one being a man working in a flour-mill in the city who had a femoral bubo and some slight febrile disturbance. He had not, however, laid up, and only obtained medical advice when he was quite convalescent. The bubo was clearing up when we saw him, and no bacterial diagnosis was possible. This probably was a case of *pestis minor*. The other may have been a case of plague of the septicæmic type, the history being merely a rapidly supervening high temperature, ending fatally on the fifth day. The *bacillus pestis* was not found in blood or sputum. The patient lived in a good suburb under the best sanitary conditions, and there was nothing to connect the case with any other case or any suspected area. The matter, therefore, must remain in doubt.

There were, then, probably nine—possibly ten—cases in all, the last being that reported on the 8th May. Some fourteen other cases reported as suspicious on investigation proved negative.

Injection among Rats .-- Only a limited number of rats could be obtained for examination in the first four months of the year, therefore it is not very surprising that no infection was demonstrated among them till the 4th May, when an infected carcase was sent in by the Harbour Board rat-catcher from the Hobson Street wharf. In none of the premises from which patients came had we been able to get any carcases except those which were too decomposed to make any satisfactory bacteriological examination. During April, however, the City Council, at the instance of His Worship the Mayor, organized their sanitary department, and appointed two special rat-catchers, and the suburban local bodies also took up the question of rat-destruction and collection, so that we were enabled to obtain a good many more specimens from all parts. Later in May I was granted permission to appoint two departmental rat-investigators and a man to prepare the dissections, and to make arrangements with Mr. Armitage, of the clinical laboratory, to conduct the bacteriological examination. We were now in a position to put the work on something like a systematic basis. In all, 4,181 rats were examined at the laboratory during the year, and of these 14 were proved to be suffering from plague. At Onehunga, save for the dead rats found in the fruiterer's shop where the first cases arose, there was no evidence of epizootic, and none of the carcases obtained from that suburb were found infected, nor could we obtain any evidence of unusual mortality among rats in any part of the city or suburbs till the 27th May, when the manager of the Singer Sewing-machine Company in Queen Street reported that a number of dead rats had been found in their cellars. A specimen was obtained, and the bacillus pestis found in the spleen and inguinal glands. This information led to important results, for, while the cellar in which the rat-mortality was first reported was in good sanitary condition, subsequent investigations revealed a number of gross sanitary defects in the block of buildings of which it formed a part, and large numbers of dead and dying rats were found in the basements. All of these which were brought to the laboratory for examination were found to be suffering from plague-infection, and numbers of decomposed bodies were undoubtedly similarly affected. Indeed, it seems possible that this block had been for many years a centre for the epizootic, as seven years before a case of plague was reported in a man working in one of the cellars, and in the process of reconstruction necessitated in a particularly insanitary restaurant there were found the mummified bodies of many rats which had probably been lying for years. It is a remarkable fact that, despite the number of infected rats found in this block of buildings, no cases occurred among human beings. On the 30th May the last infected body was obtained from this restaurant. Since this time, although on the average over 100 rats have been each week examined at the laboratory, no further infection has been detected.

We cannot, however, build too many hopes on such failure to find plague. In Syndey, where the examination of rats was much more searching, the infection seemed to disappear for long periods, only to break out afresh; while during 1908 and 1909 no cases in rat or man were known in Auckland, although the evidence is in favour of the germ having been dormant all the time. We are at all times handicapped by the suppression of evidence by business firms and shopkeepers, who fear to report disease among rats lest their business suffer should it prove to be plague. The manager of the sewing-machine firm who reported the outbreak in the City Chambers is, therefore, to be congratulated on his sense of public duty in reporting the matter, as it undoubtedly lead to the removal of at least one focus of infection, possibly the main focus in the city.

General Precations.—The occurrence of so many cases of plague within a few weeks, and the fact that two were of the dreaded pneumonic type, made a considerable impression on the local sanitary bodies, with the result that more effectual sanitary reforms were made than on any previous outbreak. The Harbour Board had steadily kept up a campaign against rats, but redoubled their efforts, so that rats are now comparatively scarce along the city waterfront. The substitution of ferro-concrete wharves for the old wooden structures, which has been proceeding for some years, must be regarded as an important sanitary improvement. In addition to this, the Board carried out some special work in concreting the open stone facing of some parts of the foreshore where rats were known to exist, and removed various accumulations offering a harbourage for rats. Refuse-bins on the wharves, into which rubbish from the shipping can be placed, were provided, instead of the former method of throwing it into the sea, where it drifted to the beaches and so provided food for rats. At Onehunga, where the wharves are under the control of the Marine Department, we were, unfortunately, unable to secure any corresponding improvements. Some poison-laying was, however, carried out. The sanitary measures taken in 1910 by the City Council were, from motives of economy, relaxed,

The sanitary measures taken in 1910 by the City Council were, from motives of economy, relaxed, so that the outbreak this year found them more or less unprepared. Fortunately, in the Mayor, Mr. C. J. Parr, we had an enthusiast in sanitary matters, under whose auspices the City Engineer and Chief Inspector were enabled to organize an effective sanitary staff, the city being divided into blocks, with a special Inspector responsible for the sanitary condition of each block. A rat catching and poisoning staff was appointed, and worked on an organized system, taking the danger areas block by block, and ridding them as far as possible of rats. The most satisfactory feature is that these appointments are on a permanent basis, and the work is still proceeding. It is to be hoped that the spasmodic and half-hearted efforts of previous years are now a thing of the past.

The actual cleansing and disinfection of buildings was chiefly done by the city sanitary staff, but when extra help was required the departmental staff and the Inspectors appointed for the Hospital Board took part in the work, which sometimes took up the greater part of the night. A large amount of good work has been done in the matter of the removal of accumulations of rubbish in the cellars and basements of business premises, and an improved system of scavenging and refuse-removal has been inaugurated, properly constructed metal refuse-receptacles being now in use. Better supervision of the various refuse-tips in the city was arranged, but these places must always be regarded as weak spots in the system of refuse-disposal. A most important improvement has been the concreting of the cellars and basements in Queen Street and the neighbourhood. Some of these were in a very bad condition, subject to flooding from defective sewer-connections below the floors, wet, foul, and ratinfested. The work of rendering these dry and rat-proof is still proceeding, and much yet remains to be done. Many old defective drains have been removed, and one very important result of the outbreak among the rats in the City Chambers block has been the removal of many old sewer-connections which entered an old watercourse known as the "Ligar Canal." This was a partly bricked This was a partly bricked channel passing under the City Chambers block, and also under the warehouse of Messrs. Smith and Caughey, and I believe it to have been an important source of infection. A new sewer has now been laid, to which the drains connect, and this unsavoury channel will shortly be completely abolished. The very dirty condition of some of the kitchens belonging to hotels and restaurants was the subject of much comment. Some of these were situated in dark, ill-ventilated underground cellars, subject to flooding from the sewers, and infested with rats. One such cellar kitchen was in a restaurant adjoining the City Chambers block, and from it many infected rats were removed. The condition of these premises was so bad that I deemed it wise to close it entirely, and the interior of the building has since been entirely reconstructed. Another restaurant in that block was closed down temporarily during disinfection and rat-proofing operations. In two hotels the kitchens have been removed from the cellars, but much work in this direction yet remains to be done, as in several hotels the food is prepared under the most unsatisfactory conditions. To enable the local authorities and the Health Department to enforce these reforms it was necessary to supplement the ordinary powers to condemn or to secure repairs to a building. To this end, on the 7th April the Governor in Council authorized the bringing into force in Auckland of section 18 of the Public Health Act, giving the Department extended powers, and subsequently regulations were gazetted dealing specially with rat-infested buildings. These proved of service; but, as a rule, the owners of property readily acquiesced in the demands of the sanitary officers. The City Council have now adopted a series of excellent by-laws dealing more particulary with the sanitary condition of places wherein food is stored or prepared. These will enable the city officials to secure the abolition of the insanitary kitchens mentioned above, and can be enforced at all times, whether plague be present or not.

In the suburbs there was a more or less spasmodic effort to deal with the rat problem. At Onehunga poison was freely distributed, and a systematic house-to-house inspection was made, which resulted in the removal of much accumulated rubbish—a cart being provided by the Council for the purpose—and the pulling down of a large number of antiquated buildings, mostly merely sheds. It is to be regretted that latterly the Onehunga Borough Council has refused to continue the work of removing decayed buildings, alleging that they were advised by the late Minister of Public Works that the certificate of the Health Officer should be ignored if they wished to avoid liability for compensation. That this is not in accordance with the Health Act is evident to any one who studies the matter.

A proposal to appoint a rat-catching staff for the combined suburban bodies was made by the Department, but it fell through, only the Boroughs of Grey Lynn and Mount Albert supporting the scheme.

Several of the more energetic suburban and country bodies took advantage of the plague outbreak to secure improved methods of dealing with house-refuse, among these being Grey Lynn, Mount Albert, and Mount Eden Boroughs. At the Thames a rat campaign was undertaken, and attention paid to refuse-accumulations.

Quarantine Precautions.—A system of bulletins reporting the occurrence of cases among human beings, and detailing the rats examined and the number found infected, was instituted, the Consuls of foreign countries and the various British Dominions being so supplied.

The bills of health were indorsed till September-three months after the last infected rat had been found.

Precautions at the Hospital.—As in previous outbreaks, the patients were treated at the Hospita' in the special isolation wards, both buildings being used for the purpose, the nursing staff at one time being accommodated in tents. Dr. Laurie undertook the medical supervision of the cases and resided in the isolation block for some weeks. There was no difficulty in getting nurses to volunteer for duty in these wards, and a special word of praise is due to these women who, knowing the risk in the matter of pneumonic plague, bravely remained at their posts, although the fact that one of their number contracted the disease showed only too clearly that the danger was not merely theoretical.

The bacteriological work was in the capable hands of Dr. Frost, who, as formerly, devoted much of her time to these investigations.

Frequent visits to the wards were paid by Dr. Roberton (honorary physician), Dr. Monk, and myself.

The following is a brief account of the eight cases in which the diagnosis was confirmed :--

1. Mrs. R.: Fruitshop-proprietor, Onehunga. Lived about half a mile from the shop. Reported by Dr. Scott, 20th March, and sent in to hospital at once, where she was examined in the evening, and a preliminary diagnosis of plague made. Had been ill three days. Right femoral bubo and high temperature. *B. pestis* found in serum from bubo next day. A guinea-pig inoculated developed the disease on the third day, and died forty-eight hours later, showing typical *post-mortem* appearances of plague, while pure cultures were obtained from the spleen. Patient was at no time a severe case, and began to improve about the eighth day, but had a very prolonged convalescence owing to suppuration of the glands and extreme prostration. Discharged, 2nd June, after ten weeks in hospital.

2. J. R.: Husband of first case. Reported by Dr. Scott on the 22nd March, and admitted same day. Had been ill only twenty-four hours before admission. Very high temperature, delirium, right femoral and inguinal bubo. B. pestis found in serum, and confirmed by culture and inoculation of a guinea-pig. Case was very acute at first, but improved rapidly after the sixth day. Uninterrupted convalescence. Discharged 21st April, after four weeks and a half in hospital.
3. D. F.: Assistant in fruit-shop at Onehunga, from which cases 1 and 2 came. Lived near

3. D. F.: Assistant in fruit-shop at Onehunga, from which cases 1 and 2 came. Lived near shop. Had been engaged in cleansing the premises on day subsequent to Mrs. R.'s removal to hospital. Became ill the same evening. Reported by Dr. Scott, and admitted to hospital 22nd March. High temperature, but no glandular enlargements. Slight cough noticed on second day after admission, and pneumonic symptoms rapidly developed. On the 28th March—the fourth day of his illness—the sputum showed typical swarms of *B. pestis*, and a guinea-pig inoculated from the sputum died on the fourth day with the usual appearance of plague. Patient rapidly developed delirium, and became comatose five days after admission, and died on the 29th March, the seventh day of his illness. 4. F. T.: Age, 17. Storeman in Great Northern Brewery bottling-store, Customs Street.

4. F. T.: Age, 17. Storeman in Great Northern Brewery bottling-store, Customs Street. Reported from the hospital by Dr. Laurie on the 30th March. Suffering from right femoral bubo and high temperature. Admitted on fifth day of illness, first symptoms being the development of bubo, with great pain. Lived in Epsom district. Gave history of handling some dead rats a few days before illness began in the lift-well of the cellar in which he worked. Serum drawn from bubo by aspirating-needle showed *B. pestis*, confirmed by culture and inoculation of a guinea-pig, which died on the second day from the date of inoculation. *Post mortem* showed abundant *B. pestis* in every organ, but there was little mottling of the spleen. The patient was at no time in a dangerous state, though the temperature rose high on the sixth day of his illness. Thereafter he had an uninterrupted recovery, and was discharged on 10th May, after being five weeks in hospital.

5. Nurse C.: Was in charge of case 3 to the time of his death, on the 29th March. Began to feel ill three days later, on the night of 1st April, when she had a rigor. On examination next day was found to be feverish, but no enlarged glands. On the 3rd April was delirious, with high temperature. Next day showed a slight improvement, but on the 5th April was worse, and slight cough developed. On the 6th April physical signs of pneumonia were reported by Dr. Laurie, resident physician in the plague wards, and on examination of the sputum *B. pestis* was found. Next day there was slight improvement, which was still more marked on the following morning. Thereafter patient steadily improved, and was discharged cured on the 4th May, after five weeks in hospital. A guinea-pig inoculated from the sputum on the 6th April died five days later, with all the usual appearances of plague, and *B. pestis* was present in bubo and spleen.

6. P. L.: Age, 18 years. Assistant in Messrs. Smith and Caughey's warehouse. Living at Onehunga. Reported on 3rd May by Dr. Harke. Visited with Dr. Monk at patient's house, and found him delirious, with high temperature, and left inguinal and femoral bubo. First symptom was vomiting, which began four days previously. Patient removed same day to hospital, where, on examining the serum removed by needle from the bubo, Dr. Frost reported the presence of *B. pestis*. This diagnosis was confirmed later by the positive result from inoculation of a guinea-pig. Illness became extremely acute on the 4th and 5th May, with very high temperature and delirium. Slight improvement was noticed on 7th May—the eighth day of his illness—and thereafter he slowly but steadily gained ground. Illness was prolonged by suppuration of the bubo. Examination of the discharge on the 15th May—twelve days after admission—failed to reveal the presence of any *B. pestis*. One noticeable feature during convalescence was the partial paralysis of the muscles about the larynx interfering with his power of speech, a symptom which remained some time after his discharge on the 2nd June.

7. Miss C.: Age, 20. Working in same warehouse as case 6, but living at Mount Eden. Reported on 3rd May by Dr. Frost, and sent to hospital same day. On examination, was found to be suffering from a small right femoral bubo, and temperature of 102° . Had been ill three days. Examination of the serum from the bubo showed the presence of *B. pestis* somewhat scanty. Diagnosis confirmed by inoculation of guinea-pig. The temperature in this case never rose very high, and all through the illness remained of a mild type, although convalescence was somewhat slow. Patient was not fit for discharge till 11th July, after ten weeks in hospital.

8. R. T. H.: Age 15. Gasfitter's apprentice, working in Messrs. ----'s warehouse at the end of April. Lived in Nelson Street, City. Reported on 8th May by Dr. Murray. Only marked symptom at the time of examination was temperature and general typhoidal symptoms. No enlarged glands. Had been ill about five days. Was sent to hospital for observation same day, and next day an examination of the blood gave a positive Widal reaction. Thereafter the patient was placed in the typhoid wards. Here he rapidly developed a high temperature, with vomiting and delirium, which increased in severity during the first week. On the 15th May, about the twelfth day from the beginning of his illness, patient showed acute pneumonic symptoms, and a careful examination of the sputum was made, but only the pneumococcus was found. The pneumonic symptoms increased in severity during the next four days till the patient was almost moribund. On the 19th May another examination was made of the sputum, with negative results so far as B. pestis was concerned, and a guinea-pig was inoculated, but failed to develop plague. During the next three days patient showed slight improvement, but on the 22nd May-in the third week of his illness-a superficial abscess formed on the chest-wall near the sternum, and the glands in the submaxillary region enlarged, and later broke down. An examination of the pus from the sternal abscess showed the presence of a bacillus of the pestis type, and a guinea-pig inoculated from this pus became rapidly ill and died in two days, the post mortem showing typical plague symptoms and the presence of B. pestis in the spleen and lungs and at the seat of inoculation. The pyzemic condition of the patient continued, and pus formed over the right knee-cap on 29th May. Dead bone was found here as in the sternal abscess. After the 31st May patient showed marked improvement, and he gained thereafter steadily, although several slight operations were required for the removal of dead bone form the various sinuses. On the 12th July examination of the discharge from these sinuses failed to reveal the presence of B. pestis, and the patient was released from quarantine, although he remained many months in hospital on account of the necrosis of the bones in the knee-cap. The case was a very unusual one, and suggests a double infection of plague and typhoid. It is hard otherwise to account for the Widal reaction in the blood and the absence of plague symptoms during the first three weeks of the illness.

Dr. Finch (Canterbury) reports :----

There were no suspects, either among rats or man, in this district.

Smallpox.

Dr. Finch reports :---

The case of smallpox that arrived in the s.s. "Knight of the Garter" at the end of 1910 made a satisfactory recovery, and no further cases occurred among the persons on board.

Leprosy.

Dr. Finch (Canterbury) reports :---

The three cases of leprosy on Quail Island are still living there, and are being carefully attended to by Dr. Upham. A case of suspected leprosy occurred on the West Coast, but after it was treated in the Greymouth Hospital the suspicious symptoms disappeared, and the person subsequently left New Zealand.

DISINFECTING-APPARATUS.

For some time back District Health Officers have had under consideration the simplifying of room-disinfection by formaldehyde vapour, having due regard to efficiency.

Considerable expense is incurred in the use of the ordinary alformant lamps—initial cost, added to the travelling-expenses incurred, and the loss of time involved in collecting the lamps after use.

A simple apparatus has now been devised, which removes many of the disabilities of the older system. This apparatus, as set out in the diagrams on next page, consists of three parts—a flat thin sheet of tinned iron (A) cut in such a way that when bent as shown in the lowest diagram it supports the tablet container (B) at a definite height above the flame of the candle (C).

The apparatus, before lighting up, should be placed in a saucer so as to avoid any chance of setting fire to the house or its effects, and, as an additional precaution, water should be poured into the saucer up to a height level with the bottom of the candle.

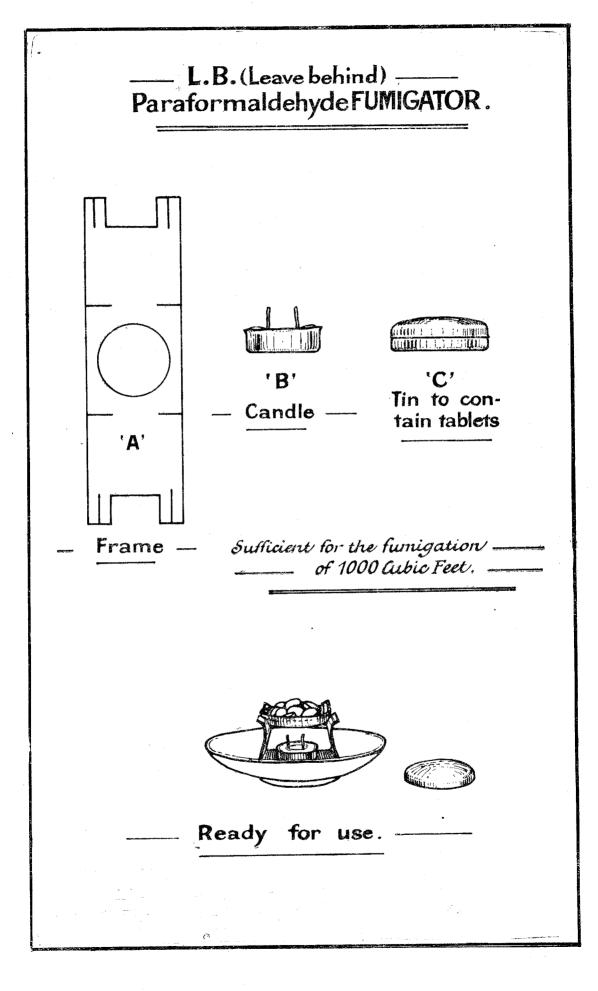

The portability of the apparatus is apparent. A dozen frames, candles, and full tablet-containers occupy but little space, and can easily be carried at one time, if need be, by an Inspector.

Arrangements have been made to enable Hospital Boards to obtain complete sets of the apparatus, without tablets, at £1 10s. per gross. The small cost of a single apparatus, therefore, does not warrant its being collected by the Inspector, hence the name—L.B. (Leave Behind) Paraformaldehyde Fumigator.

PROVISION FOR INFECTIOUS CASES.

Dr. Makgill (Auckland) reports :---

Sanatorium for Consumptives.—The Auckland Hospital Board resolved in 1910 to make provision for all classes of consumptives, but so far nothing has been done. A meeting of medical men, held to advise the Board as to the method of procedure, decided that such a sanatorium was required. With the sub-committee of the Hospital Board we visited a large number of sites offered, and it was generally agreed that that offered by the Knox trustees was in all respects suitable. As the Knox trustees had, on the advice of their medical advisers, decided not to deal with consumptives, but are prepared to erect on this site accommodation for other classes of incurables, it seemed desirable that some sort of agreement should be entered into by the trustees and the Board as to the mutual use of this very suitable bit of land. So far the Board have not taken any steps, though the trustees are quite ready to do their part. The economy of administration to be gained by such an amalgamation is obvious.

and it will be a matter of great regret if the Board fail to secure the land that offers such undoubted advantages for the treatment of consumptives, and also affords ample space for the erection of houses for chronic invalids and convalescents.

Provision for Tubercular Patients.—In the Auckland District whenever a case of phthisis occurs in a family the first idea seems to be send him or her up to the Cambridge Sanatorium. This would be all very well if the sanatorium was equipped for nursing acute cases. It is not, and the great use of the sanatorium at present is to provide a place where the consumptives can be taught to care for himself after the first or acute stage of the disease is over.

It will not be denied that phthis is is more common amongst the working population than amongst those who are better provided with the necessities of life. In the working-man's home at present, if one of the family develop phthis is, one of three things happens—(1) The patient is nursed at home as well as means permit; (2) is sent to the general hospital; or (3) in a very exceptional case is sent to the Costley Home. Only those who are constantly amongst such cases know the trouble and anxiety these patients are to all their relatives.

When the acute stage is over—and nursing in acute cases of consumption means just about the same as nursing an acute case of pneumonia—then is the time for the sanatorium. This is what is needed near Auckland so that the patient can be taught what his duty is to himself, and more so to his neighbours, and by teaching him to take all necessary precautions reduce to a minimum the danger that he may be to others. With a building near Auckland relatives could visit the patient without having to devote three days' time to paying such a visit, as is the case at present when the patient is at the Cambridge Sanatorium.

In other countries tuberculin-dispensaries have been established and are doing very good work. Such an establishment attached to the sanatorium in the larger centres of New Zealand would do equally good work, probably better, when the genial climate of this country is compared with the cold, foggy, and damp atmospheres that prevail in some parts of the globe.

foggy, and damp atmospheres that prevail in some parts of the globe. Whilst writing these notes the following particulars of a phthisical family have come under my notice. Mrs. A and her two daughters, aged 9 and 11 years respectively, all suffered from consumption, the mother being the first attacked. The mother died on the 5th May, one daughter on the 6th June, and the death of the second child is hourly expected. The timely removal of the mother would in all probability have resulted in saving the lives of the two children. Surely this is sad enough example to stir those whose duty it is to provide the requisite accommodation to do something more than "consider" the proposals for an Auckland District sanatorium, the provision of which has been urged from time to time by the Chief Health Officer, the Health Department, the medical profession, and now, in addition, by the knowledge of such a case as the one above related.

At the Waikato Hospital a site for a consumptive-annexe has been chosen near the hospital, and the work of erecting shelters will shortly be undertaken.

At Rotorua a site for the infectious disease hospital has been secured, and an agreement made between the Board and the departments concerned as to the cost of running this institution as well as the cottage hospital. – There now should be no further difficulty in completing the long-needed work.

Dr. Chesson (Wellington) reports :---

The Stratford Hospital Board have decided upon erecting accommodation for six cases of infectious disease. Sketch plans were submitted to the Board for its guidance.

There is evidence that the Wanganui Board would have been well advised to proceed with the extension of the existing infectious-diseases cottage to the whole extent of the plans as approved by the Department. The partial accommodation provided has been taxed to its fullest on occasions. In an important educational centre, such as Wanganui, it is of manifest importance that the facilities for speedy hospital isolation of infectious diseases be ample.

The Palmerston North Hospital Board has decided to proceed with an extension for females to the annexe provided for male consumptives. That such a demand should come to be urged is satisfying evidence of the value of the accommodation already provided for men.

At Wellington the scarlet-fever wards continue to be an object-lesson in special designing for infectious diseases wards.

The Waipawa Hospital Board has requested and has been furnished with a sketch plan of an infectious-diseases ward suitable for the needs of the Dannevirke Hospital.

A temporary hospital for enteric-fever cases amongst Maoris was erected by the Waiapu Hospital Board and gave excellent results.

Dr. Finch (Canterbury) reports :---

The accommodation at Bottle Lake Hospital was severely taxed, but it was only on one or two occasions that Inspectors had to be instructed to limit as far as possible the removal of cases to Bottle Lake, and no case was refused that it was advisable to isolate. 263 cases were admitted during the year.

At Ashburton and Timaru the accommodation was adequate.

In Southland, as most of the cases occurred in the country, and the epidemic was not so prevalent in Invercargill, there was ample accommodation at the fever hospital.

There is no separate and proper accommodation in the Christchurch Hospital for diphtheria cases, and the erection of an isolation block is contemplated.

In Gore there were 29 cases, and there is no provision made in the hospital for these cases.

Accommodation for Consumptives.—With the Canterbury Sanatorium at Cashmere and the Pleasant Valley Sanatorium near Palmerston, and the Cambridge Sanatorium available for odd cases, the curable consumptive is fairly well provided for. At the Canterbury Sanatorium there were 31 patients in

10—**H**. 31.

on the 1st January, 1911, 45 cases were admitted during the year, and 36 remained in on the 31st December.

The most urgent requirement now is provision for the chronic consumptive. The members of the North Canterbury Hospital Board were fortunate in being able to impress the urgency of this matter on the King George Memorial Committee in Christchurch, who approved of the suggestion that the memorial should take the form of a home for chronic consumptives. The sum of about £4,000 was collected from the public, which, with the Government subsidy, will be ample for putting up suitable accommodation for chronic consumptives. The site selected will probably be on the land adjoining the present sanatorium.

Existing Accommodation for Chronic Consumptives.—At Christchurch Hospital the men are accommodated in an old ward, and the women in temporary shelters that were erected for the purpose. This accommodation is not suitable in either case as a permanent arrangement. During the year 44 cases of consumption were admitted to the Christchurch Hospital, and only a few of these went on to the sanatorium.

At Ashburton it was proposed to put up suitable shelters for chronic consumptives of both sexes. Further action has been postponed pending the erection of the memorial home in Christchurch and the possibility of making arrangements for the taking-in of chronic cases from Ashburton at this home.

The shelters at Timaru Hospital which were erected some years ago are generally fully occupied. At Oamaru the Trustees are considering the provision of two shelters for each of the sexes.

At Invercargill a verandah was added to the old infectious-diseases ward and some alterations made to the building, and it is now very comfortable and suitable for the accommodation of these cases.

Dr. Champtaloup (Otago) reports :---

Scarlet-fever cases are accommodated at Logan's Point fever hospital (12 beds), near Dunedin, and on several occasions the accommodation has been fully taxed. Cases which could not gain admission had to be kept under supervision in their own homes.

Cases of diphtheria, if certified by laboratory examination, are admitted to the isolation wards at the General Hospital, a practice which entails some difficulty, and which calls for better provision for those cases of this disease not requiring surgical interference.

A suggested addition of 8 beds to the present fever hospital has not gone further than the preparation of plans, but it is a matter which requires the active consideration of the Hospital Board.

Typhoid-fever cases were nursed in the general wards of the Dunedin Hospital. Now a special side room is set apart for these cases, of which there have been very few this year.

For pulmonary tuberculosis additional shelters have been erected at the Pleasant Valley Sanatorium, Palmerston South, and all early cases can now be accommodated there. Beds for 22 males and 18 females are available.

The need for provision for chronic and advanced cases has been urgently felt during the year, and numerous suggested schemes have been considered. The difficulty has been temporarily dealt with by using open-air balconies on the grounds of the General Hospital, where 10 male patients can be accommodated.

SANITARY CONDITIONS.

Dr. Makgill (Auckland) reports :---

Auckland City.

The outbreak of plague, distressing as it was, had as a result the placing of sanitary matters in the city on a more satisfactory basis than ever it has been before. The appointment of six permanent Sanitary Inspectors, each having charge of a special district and each being a trained man, was in itself a most important step. The general work of cleansing and refuse-removal has already been mentioned in the report on the plague cases.

The Council's staff availed themselves of the new regulations under the Health Act to secure many reforms in the matter of the structure of buildings, the removal of insanitary kitchens and cellars, and the compulsory destruction of rats—subjects which in the absence of by-laws they had been hitherto unable to touch. By-laws dealing with the conditions under which food may be prepared, framed on the lines adopted in Australia, are now in course of adoption.

An agreement was made at a conference called by His Worship the Mayor between the police, City Council, and Health Department as to the method of securing improved sanitary conditions at hotels—a matter in which many reforms are required. Reports for the Licensing Committees are now being prepared. The purity of foodstuffs was left to the Department to deal with under the Food and Drugs Act, while the city undertook the sanitation of the stores, kitchens, and shops.

There was the usual difficulty in getting the Council to act in the matter of certain condemned buildings, and in some cases the buildings so condemned by the Department were permitted to be repaired and patched up. While, doubtless, these patchwork places are for the time being sanitary, it is to be regretted that the Council should not take the opportunity to rid the city of such unsightly and slum-like areas. A scheme for securing a large area of land at the back of Grey Street—at present lying idle—and utilizing it for workers' dwellings was laid before the Council, but so far nothing has been done.

The long-vexed question of a morgue-site has at last been settled, a site on the hospital grounds being chosen, and plans prepared and approved. The Drainage Board has progressed with the sewer-laying work considerably, and many large

The Drainage Board has progressed with the sewer-laying work considerably, and many large contracts have been let. Important sewerage improvements have been effected in Queen Street and Fort Street, some old defective structures being taken out.

Suburbs.

Drainage.—At Onehunga the sewerage scheme is approaching completion, and already some house-connections have been made.

There seems to be some prospect that the Arch Hill Gully sewer, after lying idle for eighteen months, will shortly be used for the purpose for which it was constructed. The work of connecting the city and Mount Albert sewers is proceeding. Loans have been obtained for Eden Terrace and Arch Hill, to enable them to similarly connect, but so far the work has not been begun.

At Remuera the sewer-laying has made some progress.

Newmarket is now nearly completely sewered.

At Northcote difficulty has arisen with regard to the school drainage, the boroughs interested being unwilling to spend the small sum which would be required.

Nightsoil-removal.—The scheme for a comprehensive nightsoil service has advanced a little further, and a sub-committee is now engaged in drawing up a form of contract. The difficulty about a depot still continues, the Minister of Marine having finally decided against permitting the use of an area of waste land on the Manukau Harbour Reserve, which would have been most suitable. The Drainage Board have been approached to sanction the erection of a dumping station or stations, so that the nightsoil can be placed in the sewer when the outfall-works are complete. This scheme, if properly carried out, would offer a satisfactory solution of the problem. Four meetings of the delegates have been held during the year, and several meetings of the sub-committee.

At Grey Lynn the position has become very difficult, owing to the depot in use becoming overtaxed. A temporary depot was found outside the borough, which may serve till the sewerage-work has advanced far enough to enable the water-carriage system being introduced.

Overcrowding.—Several local authorities have had the foresight to adopt by-laws preventing the overcrowding of land with houses.

The Waitemata County Council have none too soon adopted a quarter-acre minimum for Takapuna, thus saving what is now a very pleasant suburb from becoming an insanitary area.

West Tamaki have adopted a smilar area.

Epsom and One-tree Hill Road Boards have reduced their former minimum of one-quarter acre to one-fifth, possibly justifiable in view of the porous nature of the soil in their districts affording a natural outlet for the drainage-disposal.

Remuera Road Boad have raised what was formerly the very low minimum of one-twelfth of an acre to one-sixth—too late to prevent some overcrowding, but in time to save a good residential suburb from becoming a potential slum area. The evil effects of overcrowding in undrained districts have already shown themselves here, where difficulties as to nightsoil-removal and drainage-disposal have been found. In one block of shops the only method of removing the nightsoil was by carrying the pans through the shops—a disgraceful state of affairs in such a district.

Onehunga Borough Council have fixed a minimum building area of one-fifth of an acre, with a 50 ft. frontage to a public road.

Some stimulus to the movement to stop overcrowding was given by a series of lectures on townplanning by Mr. Reid, of the *Star* office, who illustrated his remarks by lantern-slides, showing some of the slums already in existence in this country, and the conditions leading to slum-formation. The Press generally have given every support to the movement to prevent such conditions in future.

Several of the by-laws adopted during the year have made special provision for large sections which cannot secure the full frontage required in the by-law. This is perfectly justifiable. The frontage is not the essential item from the sanitary point of view; therefore, where there is a section with, say, one and a half times the minimum area, there can be no harm in allowing a building to be erected on it even if the frontage to the road be below the minimum. So long as the air-space is secured, a frontage sufficient for the egress of drain-connections and the access of carts for scavenging, &c., is really all that need be asked.

Some improvements in suburban sanitation were the outcome of the feeling created by the plague outbreak.

At Mount Eden and Mount Albert a system of scavenging of house-refuse was adopted.

Some ruinous buildings were pulled down in Parnell, Mount Eden, and Remuera.

At Onehunga a very comprehensive effort was made to rid the borough of many decayed ratinfested structures which were to be found there. The manner in which this desirable work was checked has been commented on in the report on plague.

The establishment of a zoological garden in the best residential part of the suburb was the subject of much comment. Various works have been carried out by the owner at the request of the Department to minimize any nuisance; but it seems desirable that regulations should be made requiring the approval of the local authority and the Health Department before such business can be established.

At Mount Roskill a systematic effort has been made to secure better sanitation in the many piggeries that are to be found in that district.

At Mount Wellington the pollution of the foreshore by the deposits from the meat-works and abattoirs has engaged attention. The remedy is somewhat difficult, owing to the lack of drainage facilities.

Country Districts.

Steady progress is being made in the sanitation of the various country boroughs. The chief trouble in the outlying districts has been the prevalence of typhoid among the Maoris, owing to the dry autumn.

Hamilton : The sewerage system is being extended, and parts of the borough where the clay soil has hitherto given trouble in the matter of household-waste disposal are now sewered. There have

been complaints as to the position of the sale-yards, which, with the rapid growth of the borough, are now in too close proximity to dwellings. The provision of a public abattoir is much needed, and when this is made doubtless the sale-yards will be removed to the same place.

Frankton is growing quickly, and by-laws dealing with overcrowding have been adopted. Unfortunately, a very small building area is permitted--too small for an unsewered town.

Cambridge: There is a scheme in progress for a small extension of the sewerage system. Certain improvements have been effected in the septic tank. As usual, Cambridge maintains its freedom from infectious disease.

Te Kuiti : The water-service is now well forward, the mains having reached the borough.

The obstruction to the much-desired acquisition of a depot for sanitary purposes continues, and no progress has been made as to this.

Taumarunui : Little progress has been made with the water-supply scheme. A good source of supply has been acquired, analysis showing that it is a water of good quality. An outbreak of typhoid here shows the necessity for progress in sanitary matters.

The extension of settlement in the Waikato district has been great, and the resulting growth of the townships has greatly increased the work of the Inspector.

Thames continues to make steady progress in sanitation, and has quite lost the somewhat odoriferous condition of ten years ago. The use of septic tanks discharging into the rapidly running streams has proved a great success. The plumbing is now all done on satisfactory modern lines. There is need for the extension of the nightsoil service to those parts of the town lying in Thames County.

Te Aroha: The sewerage scheme has been greatly extended. Great improvements in streets and water-tables are in progress in this energetic little town. It has been singularly free from infectious outbreaks.

Waihi remains unsewered, and, as a result, typhoid and diphtheria are too prevalent. This town is too big for primitive sanitary services.

Morrinsville : A short sewerage system is being laid to serve the centre of the town. The sanitary service is being well carried out.

Rotorua is still without the much-needed infectious-disease hospital. Typhoid has fortunately not been so prevalent among the Natives here as in many districts this year. An agreement has been entered into with the Waikato Hospital Board as to the terms on which patients shall be treated at Rotorua Hospital. This should clear the ground for the establishment of the necessary accommodation for infectious disease.

Pukekohe has become a borough, and a water-supply is being introduced. The presence of the two sale-yards in the centre of the town has given rise to some trouble, owing to lack of drainage facilities.

At Mercer some drainage improvements are being carried out.

Helensville remains in a very backward sanitary condition. A thorough inspection revealed many very unsatisfactory conditions as to drainage and nightsoil-disposal.

Hobson County suffered from a very severe outbreak of typhoid among Natives-fortunately not greatly affecting the white population. A temporary hospital had to be organized at Te Ripia Native Settlement.

In Mangonui County also a very extensive outbreak among Maoris necessitated the equipment of a temporary hospital, which had to be maintained for three months.

SANITARY CONDITIONS OF THE MAORIS.

Dr. Makgill (Auckland) reports :-

In the Auckland District outbreaks, principally of typhoid, in Native settlements as under were investigated and dealt with,----

galled and deale h					
			County.		
Ripia	·		\mathbf{Hobson}		January to May.
Te Puke	·		Tauranga	••	February and September.
Takahiwai and	Whananaki		Whangarei	••	February.
Waitetuna		· .	Raglan		.))
Otorohanga			Waitomo		April.
Maketu			Tauranga		
Kawhia	••	• •	Kawhia		23
Ahipara	• • .		Mangonui	••	May to August.
Parengarenga			,,		September
Te Teko		• •	Whakatane		October.
Waima	• •		Hokianga	••	

An epidemic was reported at Whaiti, which, upon investigation, proved to be skin-disease. From the above list of outbreaks it will be seen that during the year 1911 there was much sickness amongst the Native population, and in three instances it was found necessary to establish temporary hospitals for their benefit. This was done at Ripia, Kawhia, and Ahipara, where all the cases were of typhoid fever. The Maoris were very disinclined to make use of the hospital at first, but after seeing the way in which their children were cared for, soon appreciated the many advantages of hospital treatment. The scheme that has been inaugurated by the Department for establishing nursing centres in various parts of the Dominion where the Maori population is thickest should prove of great benefit. At the present time the average Maori knows very little about sickness, and still less about nursing; whilst their ideas about feeding a typhoid patient are absolutely opposite to what should be done.

- 5

The Native is quick to observe, and many of them learned useful experience from watching how the sick were attended in the temporary hospitals above mentioned. It will be the duty of the nurses appointed to look after the Maoris, to instruct as much as possible as well as nurse. Amongst other matters, care and feeding of infants, instruction in elementary sanitary knowledge, keeping of dwellings clean and free from garbage, and the uses of clean water and fresh air will be subjects that the nurses will strive to teach. The Maori must not expect that he has only to look on and see the nurse do all the work, but to make the scheme a success will have to lend his aid and assist as much as possible by explaining to his people (who do not always understand English) the various wants and commands of the nurse.

During the year 1911 the care of the health of the Natives has been transferred from the Native to the Health Department. This change should be beneficial in many ways, one especially, that the Health Department will now obtain timely notice of sickness amongst the Maoris, whilst formerly only belated information used to reach us, often too late to be of any value. In addition, the question of responsibility is now definitely settled.

As outlined above, a comprehensive scheme has been worked out for placing nurses in various centres where the Native population is thickest, and when the full complement of nurses is obtained the Native will have an excellent system of nursing and doctoring at his disposal. That they appreciate the efforts of the nurses who have been working amongst them was very manifest both in Ahipara and Rotorua, where Nurses Bagley and Purcell did excellent work during the typhoid-fever outbreak during May and June of 1911.

In the Hot Lakes district, where there are many Natives, and which is one of the most frequented tourist resorts, Inspector Sargeant has special charge of the sanitary condition of the Maoris.

The supervision of the health of the Maori is often a troublesome subject to deal with, and will greatly increase the work of those health districts where there are many indigent Maoris, as we have already found out in the Auckland District. The Maori is often a wandering individual, and goes from place to place attending tangis and other gatherings, and when ill does not take any heed or care to prevent sickness spreading from one member of his tribe to another. They are reported here to-day, but when the place is visited it is often found that the sick have been removed, and endless time is wasted following up the trail. Once they get to understand the benefit of careful nursing, a great deal of this wandering will cease, and as the younger and better-educated generation grow up the old habits and holding of tangis, which hitherto have been such fruitful sources of sickness and infection, will die out.

Dr. Chesson (Wellington) reports :----

Enteric fever has been very prevalent among the Maoris this year, especially in the Waiapu and Cook Hospital Districts, whilst smaller epidemics have occurred in the Hawke's Bay and Taranaki Districts.

The conditions under which these people live is not conducive to health. Many of the whares in which they live are not fit for habitation; ventilation is not provided for, and I fear that in most cases, even if it were, it would not be taken advantage of. Privies are rarely found, and the habits of these people in depositing their excreta about the outskirts of the pas and settlements constitute a serious menance to the public health not only of the Maori race, but of the Europeans near whom they live. In districts where Inspectors have been appointed by Hospital Boards active measures are being taken to enforce the erection of sufficient privies, and generally to improve the surroundings. The average condition of the pas as regards accumulations of garbage, the keeping of animals, &c., is most unsatisfactory. Overcrowding is of common occurrence, whole families living often in one small room.

The appointment of nurses for the Maori race now being made will tend to gradually educate the race to a better standard of living and cleanliness, and will bring to light the existence of epidemic disease in its early stages, and thus render it possible to take preventive measures before it has spread to the alarming extent to which enteric fever has done this year.

The active measures now being taken by the Hospital Boards through their Inspectors, in enforcing the provisions of the Public Health Act amongst the Maori population, will do away with a great amount of the existing insanitary conditions. So much, however, has to be done in this direction that it will require time and constant attention to get matters on a satisfactory basis.

Dr. Makgill, in last year's report on the condition of the race in the Auckland District, calls attention to the necessity for the registration of births and deaths, and I am of opinion that the same remarks can be applied to the Wellington District.

Dr. Finch (Canterbury) reports :---

There are a great many cases of tuberculosis among the few Natives in this district. An attempt was made in the pas near Kaikoura to get overcrowding diminished and the sanitary and housing conditions improved, but with very little result. Little good can be done by the visits of Inspectors, as, if improvements are asked for, a plea of no money is always advanced. There is no doubt that more good would be accomplished by the visits of a nurse. In Kaikoura these duties might be carried out by the nurse in charge of the new hospital which has lately been built. In the other parts of the district a nurse could be appointed to visit these pas for a few weeks at a time for, say, a year; after the first year shorter periodical visits should be sufficient.

Dr. Champtaloup (Otago) reports :---

There are three centres for Natives in this district — the Peninsula, Puketeraki, and Moeraki. Those on the Peninsula and at Puketeraki are living under fairly favourable conditions, but at Moeraki there is a good deal of phthisis, and hydatid disease is rife. The services of a Native nurse would be beneficial from an educative standpoint.

SANITARY INSPECTIONS.

Dr. Makgill (Auckland) reports :---

The work of transferring to the Hospital Boards their new duties as local authorities under section 5 of the Hospitals and Charitable Aid Amendment Act, 1910, formed an important feature of this year's work. The position was explained by circulars, and each Board was waited on, and the matter gone into fully. They readily accepted their new responsibilities, and, with the exception of the Coromandel and Waihi Boards, all determined to take advantage of section 94 of the Public Health Act, and subscribe to the salary of an Inspector under that Act. This procedure has the advantage of keeping the Health Department more directly in touch with the work done in connection with infectious disease, and, further, puts the Inspector in a more satisfactory position, enabling him to take advantage of the powers conferred on Inspectors under the Act. The work has, in consequence, proceeded as before without any hitch, and with this advantage : that it is now all done by a few specially trained men. A further advantage of the system is that it still enables local authorities to obtain the services of these men for their special sanitary work, for which they pay to the Hospital Boards a special subsidy. This privilege has been very largely taken advantage of, more especially in the Waikato Hospital District, where the larger part of the salary is made up of such contributions.

For the Auckland Hospital District two new Inspectors were appointed, while arrangements were made with the City Council whereby their sanitary staff continued to carry out the work in connection with infectious disease, the Hospital Board paying the Council a subsidy to that end. In the Waikato Hospital District the Board agreed to accept the services of the departmental

In the Waikato Hospital District the Board agreed to accept the services of the departmental officer, Inspector Bennett, and the Thames Hospital Board adopted a similar course with Inspector Franklin of this Department.

An Inspector was appointed for the Bay of Plenty District, the Board asking the Health Department to make the appointment on their behalf.

The Marsden-Kaipara and the Bay of Islands Boards decided to share the services of an Inspector, and again asked the Department to make the appointment.

There were thus altogether four new appointments to be made, and for these a number of applicants, sixteen in all, were examined. The following appointments were made and gazetted under the Act by approval of the Governor in Council: Auckland Hospital District, W. Galloway, N. F. Furness; Bay of Plenty Hospital District, J. Landells; Marsden, Kaipara, and Bay of Islands Hospital Districts, H. O. Ryland.

tricts, H. O. Ryland. The Waihi Hospital Board appointed the Waihi Borough Inspector to act for them, while the Coromandel Board appointed Mr. Gardiner to act at Coromandel, and Mr. Lee at Whitianga.

The Waikato Board also appointed special disinfecting officers to act in the outlying districts of Kawhia and Ohura. These appointments will save much expenditure on travelling-expenses.

The working-out of the scheme entailed a large amount of correspondence and many interviews and visits. The result seems to promise well, as we have now properly trained Inspectors in every district, and Inspector Grieve is enabled to devote himself more exclusively to the work under the Food and Drugs Act and other Acts administered by the Department.

Inspector Sargeant, lately departmental Inspector at Wanganui, has been appointed to represent the Department in Rotorua and the Hot Lakes district. He acts as Borough Inspector for the Tourist Division of the Agricultural Department, and supervises the sanitary condition of the Natives in Rotorua and East and West Taupo Counties. This officer does not act for the Hospital Board, but remains wholly in Departmental employment. Acting in conjunction with the Native nurses, he has already effected many improvements in the condition of the Native settlements.

Inspection of Factories. — Several cases, where in connection with factories sufficient sanitary accommodation for employees is not provided, being brought to my notice, it was ultimately arranged between the Labour and this Department that with certain modifications one w.c. to every twenty-five persons employed should be the number regarded as "sufficient" privy-accommodation in places where persons of either sex are employed. It was further agreed to recommend that in any amendment of the Factories Act or its regulations this definition may be embodied.

The assent of the Department of Labour upon your recommendation, obtained after representation made by the Inspector of Factories, Auckland, and myself, to transfer the sanitary inspection of factories to officers of this Department; will prevent some overlapping of duties in this respect, and conduce to the well-being of the employees.

The following tables show a summary of the work done by the Inspectors.

Samitary Inspections.—Returns for Year ending 31st December, 1911. By Inspector Grieve.

Dr. Finch (Canterbury) reports :---

Under the provisions of section 83 of the Hospital and Charitable Institutions Act, 1909, local bodies were able to delegate certain of their power under the Public Health Act to the Hospital and Charitable Aid Board. The principle adopted was that any local body which had not sufficient means to pay or sufficient work to employ a full-time qualified Inspector should be asked to delegate their powers to the Hospital Board, the boroughs being asked to make a special contribution towards the Inspector's salary, and the country districts being given the services of the Inspector without any additional contribution. As there are some 100 local bodies in the district, a considerable amount of time was involved in communicating with these local bodies and in interviewing as many as possible of the Borough Councils and the County Councils.

The results obtained were highly satisfactory, as most of the local bodies which I was anxious should delegate their powers consented to do so. Owing to the exceptionally large number of cases of infectious diseases that occurred throughout the district as soon as the Hospital Boards took control, the Inspectors at first had very little time to devote to carrying out routine inspections. Latterly, however, there has been more time to spare for this purpose.

The local bodies which have delegated their powers appreciate the fact that the carrying-out of inspections by a properly qualified Inspector who is independent of any local influence is a great improvement on the old method of an untrained person living in the district carrying out the duties in most cases for some such paltry sum as £5 or £10 a year.

A house-to-house inspection is being made in the more thickly populated parts of the district, and a higher standard of sanitation is being obtained where these inspections have been carried out.

I have no doubt that as time goes on those local bodies which did not see their way to delegate their powers to the Hospital Boards will be glad to do so.

The following table gives a summary of the work done by the Inspectors.

Dr. Champtaloup (Otago) reports :---

In May of this year it was deemed advisable to make a thorough sanitary inspection of Dunedin City by special house-to-house visits, in view of the prevalence of plague in Auckland.

The City Council, Hospital Board, Drainage Board, and Harbour Board were approached, and each readily gave £40 towards the cost of appointing additional Inspectors. These temporary Inspectors were appointed, and these working with the Hospital Board's Inspectors, all under the supervision of Inspector Cameron of the Health Department, successfully carried out the scheme.

The inspection resulted in a considerable clean-up in Dunedin, and improvement in sanitary matters generally, though much remains still to be done. A number of houses unfit for occupation were noted, and these are in course of inspection for condemnation by Dr. Finch, District Health Officer.

No attempt was made to exterminate rats, for with the funds available this was not practicable, nor would a spasmodic effort be of any avail if the experience of other towns be considered. It was felt that more permanent good would follow the general sanitary improvement and the destruction of rat-warrens.

All diseased or dead rats found were examined at the laboratory, but none found showed any lesion of plague.

Following are particulars of the inspections made : Number of streets dealt with, 394 ; number of premises in streets, 10,601 ; number with dry privies, 4,892 ; number with other drainage defects, 5,316 ; number with general sanitary defects, 1,576 ; number without proper refuse-tins, 7,575. These totals were in addition to the large number of defects such as the destruction of rats, removal of refuse, &c., already dealt with on the premises by the Inspectors.

Out of the above total of 10,601 premises inspected, 345 buildings required extensive structural improvement and renovation; and 33 buildings were noted for careful reinspection with a view to having them condemned for entire demolition.

An inspection was made in all the suburban boroughs at the same time, though not to such a full extent as in the city.

Ruinous Buildings.

In addition to the foregoing particulars of the comparatively large number of buildings to be pulled down or extensively repaired in Dunedin City, the following notices to pull down or extensively repair buildings have been issued for other districts: Extensive repairs—Maori Hill, 1; Mornington, 2; Port Chalmers, 3. To be pulled down—Port Chalmers, 5; Lawrence, 1; Milton, 1.

Dr. Finch (Canterbury) reports :---

The following table gives the main particulars on these matters in the chief towns. The term "satisfactory" is intended to mean that the water-supply or sewerage system is up to the general standard in the Dominion, and not that the ideal state of perfection has been attained.

standard in the Dominion, and not that the ideal state of perfection has been attained. The water-supplies are generally fairly safe from human pollution, but are not so safe from animal pollution or from general dirt pollution, and some would be greatly improved by filtration.

Dr. Champtaloup reports :---

Town.	Water-supply.	Sewage-disposal Systems.
Palmerston	Public supply from Blue Mountains to two reservoirs holding 130,000 gallons	Surface drainage by means of natural watercourse. Nightsoil-removal: sealed-pan system; monthly removal service. Nightsoil taken to depot and ploughed into ground.
Waikouaiti	Private supply from tanks. Public scheme under consideration; estimated cost, £9.000	Pan system. Nightsoil removed by private indi- viduals and buried in sandhills.
Port Chalmers	Public supply from hills behind town to reservoir and reticulated through about eight miles of mains	About half of the borough is sewered. These sewers discharge on to harbour foreshore. The remainder is sealed-pan system. Nightsoil is removed to Corporation sanitary farm at Sawyer's Bay, and utilized on land. Refuse-removal, collection by Corporation twice-weekly.
West Harbour	Private supply from tanks. A small part of the borough is supplied from old brewery reservoir at Burke's. A supply has been arranged for from Dunedin City reservoirs at 6d. per 1,000 gallons, and the reticulation (to cost £4,950) will be commenced early next year.	
Dunedin City	Public supply from Silverstream and Ross's Creek. Improvements have been made in the reservoirs, and doubtful sources of supply are being gradually eliminated. A much-needed and oft-recommended reform is the rigid exclusion of picnic parties from the vicinity of the reservoirs. In response to recommendations a notice has been placed at one of the principal reservoirs prohibiting picnic parties at hours when they are not at all likely to be there	Partly water-carriage by means of Dunedin and Dis- trict Drainage Board sewers which discharge into- deep w.ter at Lawyer's Head. Outlying parts of the city are still being served by the pan system. Monthly nightsoil removed by private contractors to depot near railway engine-sheds, where it is dumped into sewers. Refuse-removal : daily re- moval in business parts of the city; residential area, twice weekly. It seems remarkable that Dunedin and suburbs have put up with a monthly removal service, which would not be tolerated in many smaller towns with less congestion of popula- tion. Dunedin City now proposes to do the work itself, and have a fortnightly removal, but it should be a weekly one to bring Dunedin into line with similar towns.

Town.		Water-supply.	Sewage-disposal Systems.

Milton		Private supply by tanks and a few shallow wells	giving highly satisfactory results. Monthly removal by contractor to depot near Fairfa
Kaitangata		Private supply from tanks	Private removal by householders, who bury nights in gardens. Refuse-removal: none.
Balclutha		Private supply from tanks. A public supply for the borough has now been arranged for from well sunk near bank of the Molyneux River, and the work has now been commenced. Estimated cost	Fortnightly removal by contractor to depot outso borough.
Tapanui		£7,500 Public supply from Blue Mountains to small reservoir	private remains to den
Lawrence		Public supply taken from the head of	Tieruso Tomo, al 1 1 1 manhold
$\mathbf{Roxburgh}$		Public supply from a source about 2 miles from the borough	Garden burial. Refuse-removal by nousenous to dumping-ground provided by Corporation.

OFFENSIVE TRADES.

93

Dr. Makgill (Auckland) reports :---

The approval of the Department was sought in support of that of the local authority for the establishment of a bacon-factory at Otahuhu. The matter was one carried over from the previous year, there being considerable objection to the site originally proposed. The application was eventually approved, but upon a site agreed upon other than that originally intended to be used, and consent being subject to the requirements of the Department of Agriculture (Meat-inspection Division), to whom I made suggestions for the avoidance of unwholesome conditions.

An application of a like nature on behalf of another firm was approved after somewhat lengthy treaty regarding site, plans, and disposal of drainage.

Certain offensive trades established in the Mount Wellington district continued to give much trouble on account of indifferent construction and careless management. The by-laws referred to in last year's report as being then compiled were completed early in the year, and, being adopted and put into operation by the local authority, have been instrumental in effecting much improvement.

Later on it was found that further and serious difficulties had arisen by reason of the pollution of the foreshore of the Upper Manukau Harbour by the discharge of offensive matters by these establishments. I had to deal with the matter by formal orders upon the parties concerned, made under the special powers authorized by the Governor to be exercised under section 18 of the Act.

Improvements required have necessarily taken time to complete, but the several firms are carrying out works designed to prevent the nuisance which had arisen.

Dr. Finch (Canterbury) reports :---

Two permits were issued, one for a sausage-casing works at Islington, the other for boiling-down works near Oamaru. There is a necessity for improvements in the purity of the effluent in the case of offensive trades that drain into the Avon and Heathcote Rivers, and steps are being taken to improve matters in this respect.

INSANITARY BUILDINGS.

Dr. Makgill (Auckland) reports :---

The annual record of buildings, premises, &c., ordered to be demolished, repaired, or otherwise made sanitary, has been increased considerably owing to the special powers under section 18 of the Public Health Act being brought into operation, and owing to the other drastic measures being taken following upon the outbreak of plague. In all during the year there were issued—105 condemnation certificates, 109 repair and cleansing certificates, 1 order to cease keeping animals on premises, 40 certificates in respect to buildings and premises in pursuance of the special powers for the more effectually checking infectious diseases.

In some cases where orders to pull down were issued I was afterwards satisfied with proposals made to reinstate buildings, and I ultimately consented to such reinstatement in lieu of destruction, fresh certificates thereupon being issued. In other cases where in my opinion the proposals would not suffice to render the buildings sanitary the requests were refused. A great number of repairs and renewals to buildings and premises were effected upon the verbal or written requisition of Dr. Monk or myself and the Inspectors without the need to issue the more formal and legal notices above detailed.

Removal of Buildings-that is, from Locality to Locality.

The Department was consulted upon several occasions when it was proposed to remove buildings or building material from one locality to another.

Houses built on Refuse-tips.

I was called to inspect some new cottages in a city suburban locality which had been erected on a recently used refuse-tip. The cottages were well built and of a very fair class, but the foundation was such as to render it necessary for me to issue an order declaring these buildings insanitary, and requiring the owner to go to considerable expense in clearing the rubbish away and taking other measures. On inquiry I learnt that the building by-laws give the Building Inspector no power to refuse a building permit where the foundations are on damp or foul earth. This is most unsatis factory, especially in view of the extensive reclamations now going on, in which more or less decomposable material is present in the deposit. I have communicated with the city authorities, with a view to the framing of the necessary by-laws to deal with cases of this nature.

Dr. Finch (Canterbury) reports :---

On the initiative of the late Mayor of Christchurch, Mr. T. E. Taylor, a large number of special inspections were made in connection with alleged insanitary buildings.

Under section 90 of the Public Health Act, 1908, 65 certificates were issued under subsection (1), under which the Christchurch City Council gave notice to the owner requiring him to pull down a building or portion of a building. In the majority of these cases these buildings were pulled down, but in a few cases the owners were allowed to make repairs.

Under subsection (3), 33 certificates were issued specifying the repairs that were necessary to put the building in proper repair.

I received great assistance from the Building Inspector of the City Council, but it is in many cases very difficult to draw a hard-and-fast line between the building that should be pulled down and the building in which repairs should be specified. In many cases it is difficult to assert that the repairs that are specified will meet all requirements, as the framework may prove worse than was anticipated when the repairs were carried out. In the case of a building ordered to be pulled down, the City Council now notifies the owner on the notice that he is at liberty to submit a specification of repairs before a certain date, but that the repairs, if approved by the City Council and myself, will be carried out at his own risk in respect to making a building permanently habitable.

Unfortunately, the pulling-down of old buildings does not solve some of the problems of the housing question. It is very difficult for a certain class of person who cannot afford to pay the same rent as a married man in full employment to obtain any suitable accommodation; they are practically driven to going to these old dilapidated buildings. Such persons are single persons of either sex, or widows with a small family, &c. The speculative builder is not likely to cater for this class of person, and it certainly seems desirable that the local body or another Department of the Government should take into consideration the matter of providing suitable accommodation for such persons.

By-laws.

Dr. Makgill (Auckland) reports :---

The following local authorities have agreed to a limitation of area in conformity with the powers provided under section 2 of the Amendment Act of 1910 :---

			Acre.
One-tree Hill		 	One-fifth.
Epsom		 	One-fifth.
Tamaki West	••	 	 One-quarter.
Remuera		 	One-sixth.
Mount Roskill		 	 One-fifth in closer settled area.
Frankton		 	One-ninth.
Waitemata		 	 One-quarter.
Onehunga		 	One-fifth.
Onenunga	••	 	

In the case of One-tree Hill, Epsom, and Mount Roskill the area was originally one-quarter acre, but after the decision of the Supreme Court in 1910 these by-laws were found *ultra vires*. These Boards, in drawing up new by-laws in accordance with recent legislation, fixed on the lesser area in view of the spread of population in their districts. As these districts have a very porous subsoil greatly facilitating the disposal of sewage, these by-laws were approved, although I should have preferred that the original limitation was retained.

Waitemata County Council very wisely adopted the one-quarter acre limitation at Takapuna in spite of many efforts of land-speculators to reduce the area.

By-laws have been prepared or approved for,-

7	T	T T		
Hokianga				Drainage, nuisance, &c.
Remuera				Building areas, plumbing and drainage.
Tamaki West		• • •		Building areas.
\mathbf{Epsom}				Building areas—approved on being amended.
Waitemata (Tak		district)		Building and sanitation.
Mount Wellingt	on		·	Offensive trades.
Te Kuiti	• •			Regulating the sanitary service.
Thames County	• •	• • •		Sanitary.
Taumarunui		••		Drainage.
Tauranga		• •		General sanitary.
Ngaruawahia		••		Control of Native camps.
One-tree Hill				Building areas.
Avondale		• •		General sanitary.
$\mathbf{Frankton}$		• •	• • •	Building areas.
Opotiki			• •	General sanitary.

The need for general model sanitary by-laws for small local authorities has been felt in the past. An effort is now being made to draft such a set, and they will shortly be completed.

Dr. Chesson (Wellington) reports :----

By-laws relating to sanitation,	&c.,	were d	ealt with or recommended as follows :
Woodville Borough			Drainage.
Napier, South Town			Overcrowding of buildings on sections.
Gisborne			Stables.
New Plymouth			Stables.

QUARANTINE OF OVERSEA SHIPPING.

Dr. Makgill (Auckland) reports :-

The presence of plague in Auckland in the months of March, April, May, June, and July necessitated the indorsement of the fact upon the "bills of health" of outgoing vessels.

I communicated with Head Office re advisability of the Department issuing bill-of-health forms in amended and more suitable form, and it has been agreed to do so.

Medical inspection of incoming vessels from Australian ports at the wharf instead of in the stream was tried in the case of the s.s. "Zealandia," 29th September, as an experiment, with a view to ascertaining the possibility of meeting the wishes of the Australian Commonwealth authorities in this The experiment was found to be without objection. Subsequently, by notice in the Gazette, 12th October, the Governor revoked certain Proclamations which had declared the Australian Commonwealth with Tasmania to be infected, thus permitting all vessels from those places to come to the wharf for inspection instead of having to anchor at the quarantine-ground. companies and the authorities interested were advised accordingly.

Arrangements have been made with the Harbour Board to accommodate a fumigating plant for disinfecting holds, &c., to be supplied by the Department. The need for such a machine was greatly felt during the plague outbreak, and it is to be hoped that the whole question of disinfection in connection with the port will shortly be placed on a modern footing. At present bales of rags, flock, &c., cannot be dealt with in a satisfactory manner. One or two such bales were sent on arrival to a local steam-laundry, and there subjected to a high temperature, thus rendering them sterile. The presence of a steam disinfector for port work would be of great benefit to importers, and it might be made available also for the treatment of goods from infected houses in the city.

Dr. Chesson (Wellington) reports that the quarantine-station at Somes Island has not been used during the year.

Dr. Finch (Canterbury) reports :----The s.s. "Knight of the Garter," which was quarantined for smallpox, was allowed to proceed to Auckland to complete her quarantine.

At the Bluff some cases of beri-beri occurred among the crew on a ship from Christmas Island. The ship went on to Dunedin, where the cases were taken to the Hospital and successfully treated.

Dr. Champtaloup (Otago) reports :---

There has been no outstanding feature in relation to quarantine, and the quarantine-station at Port Chalmers has not been utilized. Most of the vessels making this port from overseas do not carry passengers, and only once during the year did one of the immigrant steamers discharge her passengers here.

DISINFECTION OF OVERSEA GOODS.

Dr. Makgill (Auckland) reports :---

Forty-two parcels of clothing (oversea) were fumigated, for which fees amounting to £6 5s. 6d. were received.

Dr. Chesson (Wellington) reports :---

Seventy-eight packages of goods, chiefly second-hand clothing, were dealt with at the Department's fumigator.

Dr. Champtaloup (Otago) reports :---

Five bales of mill waste were examined, and admitted only after disinfection; while some 109 bales were admitted after examination without such precaution being considered necessary.

IMMIGRATION RESTRICTION ACTS.

Dr. Makgill (Auckland) reports :-

January 16: R., phthisical case. Detained in hospital till returned home by shipping company.

March 14, at Auckland : B. J., restricted immigrant (venereal). Allowed to land, he reporting for six months as out-patient at hospital.

April 13, at Auckland : One passenger, s.s. "Indrabarah" (phthisis). Southern ports advised of presence on board.

June 15, at Kaipara: Epileptic, ex "Valador." Dealt with as undesirable immigrant. July 4, at Auckland: W. B., phthisical immigrant, ex "Nairnshire"---urgent case. Removed to hospital, where he died a week after admission.

Dr. Chesson (Wellington) reports :---

. The following is a summary of cases dealt with under this Act :---Three prevented from landing; 1 sent to Porirua Mental Hospital. Mentally afflicted 4 . . • • Chronic phthisis .. 1) . . • • .. 1 Spinal trouble ۰. Prevented from landing. Infirm .. 1 •• . . Heart-disease .. 1) Total .. 8

Dr. Finch (Canterbury) reports :---

At Lyttelton 5 persons were allowed to land under the bond required by the Act, and 5 seamen were reported to the Customs to prevent them being landed.

Dr. Champtaloup (Otago) reports :---

There have been 2 prohibited immigrants. None have been landed under bond.

							4 A	-	
]	,078

The exemption certificates issued numbered 6,754.

The births in the Dominion for the year 1911 were 26,354, from which it will be seen that only 1.6 per cent. of the parents had their children vaccinated.

The number of vaccinated children under one year of age has apparently never been more than 25 per cent. to which it rose in 1903 from 12 per cent. in the previous year, dropping again in 1904 to 10 per cent. The high proportion in 1903 was due no doubt to the slight outbreak of smallpox about that time.

SPECIAL INSPECTIONS BY DISTRICT HEALTH OFFICERS.

Dr. Chesson (Wellington) reports :-

Waiapu, Tokomaru, Waipiro, and neighbouring settlements and Pas: Re outbreak of typhoid amongst Natives (2 visits) and general sanitary matters.

Eketahuna: Re series of typhoid cases and general sanitary condition (2 visits).

Otaki: Re case of typhoid.

Petone: Re general sanitary matters (several visits).

S.s. "Marama": Re prohibited immigrant.

Gisborne: Re general sanitary matters (2 visits). Cook County and Waikohu: Re outbreak of typhoid fever amongst Natives.

Blenheim : Re proposed water and sewerage schemes, general sanitation, and insanitary buildings (2 visits).

Picton: Re general sanitary matters and insanitary buildings (3 visits).

Hawera, Stratford, Eltham, and Normanby : Re general sanitation.

New Plymouth: Re suspected consumptive patient, disposal of refuse, and general sanitation (2 visits).

Waitara : Re general sanitation. Mangaweka : Re proposed water-supply and sewerage scheme, and general sanitation (2 visits). Rangataua : Re drainage.

Lower Hutt: Re houses erected and occupied without proper privy-accommodation, and general sanitary matters.

Taranaki and Egmont Counties: Re outbreak of typhoid amongst Natives; inspection of pas, &c.

Turakina : Re unrecognized outbreak of scarlet fever.

Feilding: Nightsoil service in unsewered part of town. Pahiatua: Re drainage of stock-yards, &c.

Waipukurau : Re investigation of complaint as to conduct of nightsoil service.

Napier South : Overcrowding of building-sites and general sanitation.

Havelock : Re defective sceptic-tank installation. Hastings : Re insanitary dwellings, boiling-down works, &c.

Eastbourne : Re milk-supply.

Hutt County, Foxton, Onslow: Re insanitary dwellings.

Woodville: Re new by-laws. Westport: Re proposed sewerage scheme and general sanitation.

Murchison : Re medical subsidy.

Tahuna : Surface drainage.

Nelson : Re new drainage at Mental Hospital, insanitary buildings, &c.

Wellington City : Frequent inspection of insanitary buildings, and other special sanitary matters. Factories: Numerous inspections were made at the request of the Department of Labour as to suitability of premises used, or proposed to be used, as factories.

Dr. Finch (Canterbury) reports :-

The following special inspections were made by the District Health Officer and other officers :---Christchurch City and suburbs : Inspections re rat regulations.

Woolston: Offensive trades, polluting Heathcote River.

Lyttelton : Inspections re rat regulations.

Sockburn : Site for offensive trade.

Ashburton County Hospital : Drainage.

Ashburton District High School: Drainage.

Ashburton : Re rat regulations.

Timaru: Report on sceptic tank.

Timaru : Drainage connections.

Dunedin: Kaikorai drainage and offensive trades.

Southland : Lorne Farm drainage.

Otautau: Inspection re sealed-pan service.

Hokitika: Special inspection of town re sewerage of same.

Otira: Installed sceptic tank and drainage, including plumbing work at cottage hospital. Mataura : Source of water-supply.

SPECIAL REPORTS BY DISTRICT HEALTH OFFICERS.

Dr. Chesson (Wellington) reports :---

To Chief Health Officer re typhoid and sanitary condition of Maoris in Waiapu.

Gisborne: Sanitation of stables.

Blenheim : Sewerage scheme and water-supply.

Pahiatua : Drainage of stock-yards.

Napier South : Re by-laws to prevent overcrowding of sites.

Westport: Re proposed sewerage scheme.

Dr. Finch (Canterbury) reports :-

Christchurch City Council: Insanitary buildings.

Chief Health Officer.

Re lepers on Quail Island.

Suspected case of leprosy at Greymouth. .

Quarantine buildings, Bluff.

MIDWIVES ACT, 1908.

Section 11 of the Act provides that a District Health Officer may temporarily suspend any midwife from practice if such suspension appears necessary in order to prevent the spread of puerperal fevers.

Dr. Makgill (Auckland) reports :---

Five registered midwives have been suspended on account of the occurrence of puerperal septicæmia in patients attended by them; 1 was reported to the Inspector-General of Hospitals, and 2 unregistered women have been warned not to attend any cases for the usual period of suspension.

Dr. Chesson (Wellington) reports :----

Two registered midwives were temporarily suspended, on account of puerperal septicæmia in patients attended by them.

Hawera and Stratford : One registered midwife was temporarily suspended, and 1 unregistered midwife was warned not to attend any case for the usual period of suspension.

Two unregistered women were cautioned in the Wanganui Hospital District.

Dr. Finch (Canterbury) reports :---

All cases of puerperal septicæmia have been visited and inquired into, but it has not been found necessary to suspend any midwife. Inquiries have also been made in cases where it has been alleged that an unlicensed midwife has been attending cases without a doctor or receiving cases into her house contrary to the provisions of the Hospitals Act.

SALE OF FOOD AND DRUGS ACT, 1908.

Dr. Makgill (Auckland) reports :---

Mr. A. J. Parker, F.C.S., was appointed an analyst as from 1st November, 1911. This appointment has enabled us to undertake a large amount of work under the Food and Drugs Act which was formerly impossible, more especially in regard to the inspection of milk-supplies. During the current year we may now hope to get this important branch of our work fully organized. We cannot, however, have the full benefit of the Act until the new regulations as to standards are adopted. A great deal of work has already been done in this matter, and during the year standards for butter and cheese were gazetted, and special regulations for the cleanliness of the conditions under which foodstuffs are prepared were drafted.

Drugs.—A conference was held at Wellington with the representatives of the Pharmacy Board as to the standard of purity for drugs, and some important points agreed upon; but other matters as to the labelling of certain drugs still remain undecided. We have been in constant communication with Dr. Ashburton Thompson, of the Sydney Commission under the Sale of Food and Drugs Acts for the Commonwealth, and it has been decided to work as far as possible on parallel. We are now awaiting the publication of the newest regulations for New South Wales.

Margarine.—An inquiry was made as to the making, importation, and use of margarine. No evidence was found that margarine was made in the district. The margarine imported appeared to be made use of only in the process of baking, and the quantity is not very considerable.

Dried Milk.—The subject of a standard for dried milk has led to considerable correspondence.

Egg-powder.—Various manufacturers of egg-powder have been notified as to the proper labelling of this substance. So far the labels have been of a nature calculated to give the public a false impression as to the qualities of this powder.

Cocoa.—A sample of cocoa was examined with reference to its suitability for the New Zealand market, and was reported upon adversely.

Water-examinations.—1st February: Report on proposed water-supply, Taumarunui; favourable. 6th March: Report on proposed water-supply, Otorohanga; favourable. 26th May: Water from artesian bore at Frankton; water contained considerable quantity of organic matter; further sample advised.

Dr. Finch (Canterbury) reports :—

The taking of samples under the Sale of Food and Drugs Act has been chiefly confined to milk samples.

Samples of butter were taken in Christchurch and tested as to the amount of moisture, and none were found to be under the standard.

Warnings were issued to certain manufacturers of baking-powder the labels of which appeared to imply that eggs were employed in the manufacture.

Dr. Champtaloup (Otago) reports :---

Several attempts have been made to obtain the services of a competent analyst under the Act for this district, but without avail. Till such is obtained very little can be done in a routine way, though much requires to be done.

PART III.

LABORATORY WORK-ANALYTICAL AND BACTERIOLOGICAL.

The Dominion Analyst (Dr. J. S. Maclaurin) reports :---

I have the honour to forward herewith returns of analyses made in the Dominion Laboratory, Wellington, for the Department of Public Health during the year ending 31st March, 1912. These returns show a total of 475 analyses of a varied character. A return showing the analyses made for the Police Department, some of which may be of interest to you, is also supplied.

Summary of Analyses made in the Dominion Laboratory, Wellington.

Dr. Makgill (Auckland) reports :---

Owing to the difficulty of keeping the necessary cultures and media in satisfactory condition, it was decided to make arrangements with Dr. Frost, honorary pathologist to the Hospital, as to the examination of certain specimens. Accordingly all blood samples for the Widal reaction and all swabs for diphtheria are now submitted to her for examination on behalf of the Department.

The following is a summary of pathological specimens submitted to the Auckland office for examination :---

			~		
118	sputums	••	•••	For examination	for tubercle bacilli.
40	swabs			,,	diphtheria.
22	blood			,,	typhoid.
3	urine			,,	general.
7	smears			,,	gonococcus.
2	slides			"	,,
1	vaginal discharge		• •	,,	37
1	mass from lung			,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	tubercle bacilli.
1	bile			,,	general.
1	curetting			,,	carcinoma.
4,181	rats		• •	,,	pestis (of which 14 were
					plague-infected).

A number of specimens were received and forwarded to the Bacteriologist, Wellington, for report. Seven samples of antiseptics were tested as to their powers as insecticides.

Experiments were conducted as to a suitable candle for the formaldehyde-vapour fumigatingapparatus adopted by the Department.

Mr. Hurley, Bacteriologist, Wellington, reports :---

For the year ending the 31st March, 1912, the increase in the number of specimens, which was 32 per cent. over that of the previous year, has heavily taxed our small staff, and consequently certain classes of examination were delayed, and some kinds of minor work had to be declined.

The amount of calf-lymph required during the year by the Health Department was double that of the previous year, and amounted in value to £1,500. There has been an increase also in the amount

distributed of the various sera and vaccines imported by the Health Department and stocked at the vaccine station.

105

I have pleasure once more in acknowledging the assistance of Mr. P. L. Hickes, and in stating that he has carried out efficiently the examinations of a more detailed character that he was entrusted with during the past year.

Attached is a classified report of the examinations made during the year.

Table showing Results of Examination of Pathological Specimens from 1st April, 1911, to 31st March, 1912.

The laboratory routine is to examine swabs direct, and, if diphtheria bacilli are found, to report immediately, confirming by cultures.

In all cases cultures are examined at the end of twelve hours, and reported again at the end of twenty-four hours where the previous finding was negative. In a few cases it is found that the second examination of cultures after twenty-four hours reveals the presence of a few previously undetected diphtheria bacilli.

The direct examination of swabs is useful in detecting Vincent's angina, a condition clinically resembling diphtheria, and which would be missed if the ordinary cultural methods were relied on. Two of the negative swabs received were diagnosed as from this disease.

Widal Reaction for Typhoid.

In 11 of these, where the cytological findings suggested tubercle, inoculation was necessary, 7 being thus confirmed. In only 2 of the 11 were tubercle bacilli found by direct examination. Of the cerebro-spinal cases, 2 were tubercle, 1 pneumococcal, 1 Weichselbaum's meningococcus, and 1 from a fatal case of poliomyelitis, resembling Landry's paralysis in type. Several cases of poliomyelitis occurred in the district at this time, but a laboratory investigation was only obtainable

H.---31.

110

For obvious reasons this method of examination has largely been confined to hospital practice, but of late practitioners are availing themselves more widely of the opportunity for early diagnosis in private practice.

Bacteriological Examination of Pus from Various Sources .--- Bacteria isolated.

In all cases the orignial method of Wasserman was used, with the modification of alcoholic extract of normal heart muscle.

The number of positive results is large in comparison with the negative, seeing that this disease in its primary and secondary forms is somewhat uncommon in the South Island; but the results are explained by the fact that the reaction has only been available to practitioners since the laboratory was opened in 1910, and a number of old-standing cases have been brought to light. It is not expected that in future years the number of examinations required will approach this total.

Agglutinative sera	••	••	•• *	Ì	,,	т, В.
				(,,	B. enteritidis of Gaertner.

And others are in course of preparation.

The hospital stock of antitoxins, sera, &c., is now kept in and controlled from the laboratory. It is hoped that thereby a more efficient and economical use is made of them.

Tuberculin.

During the year the Palmerston Sanatorium, the Hospital, and local practitioners were supplied with freshly diluted tuberculins as required, and it has been found that the better results obtained have warranted the extra tax on the time of the laboratory staff. The following quantities have been supplied :---

ionowing quantities have been supplied.

Salvarsan "606."

This drug has been used with success in a number of cases, and is prepared for the practitioner immediately before use. The subcutaneous method has been abandoned for the intravenous route, and in all cases the water used (300 c.c.) is freshly distilled just before use. In all, 13 doses have been prepared for injection in the laboratory.

This department, instituted late in 1910, had to be abandoned after August, 1911, owing to illness on the staff. The various branches of the laboratory work had grown so much that our accommodation and time was overtaxed, but it is hoped that this department may in the near future be again available to the public.

15

APPENDIX II.—HOSPITALS AND CHARITABLE AID.

PART I.-REPORTS ON INDIVIDUAL INSTITUTIONS.

HOSPITAL AND CHARITABLE INSTITUTIONS UNDER THE CONTROL OF DISTRICT BOARDS.

BAY OF ISLANDS HOSPITAL AND CHARITABLE AID BOARD.

Meets quarterly. Chairman : William Stewart.

Secretary : H. C. Blundell (part time) and one assistant (whole time).

Public Health Inspector : A. E. Skynner (conjointly with Marsden-Kaipara Hospital Board).

District Nurses : Mabel Hamilton and Eleanor E. Chappell.

Institutions under the Board's control : Mangonui Hospital (general and maternity cases), Rawene Hospital (general and maternity cases).

Mangonui Hospital.

Chairman of Hospital Committee : William Stewart. Usual date of meeting of Hospital Committee : First Saturday in the month. Medical staff, stipendiary : W. D. Perry, M.R.C.S., L.R.C.P. (non-resident).

Matron : Edith M. Clark.

Localities, broadly, from which patients came: Mangonui County. During the last year the work in this Hospital has greatly increased. A number of typhoid c from the Maori pas in the district were sent here, and some midwifery cases are being received. A number of typhoid cases

The Matron (Miss Clark) has completed her course of midwifery training in the St. Helens Hospital, Christchurch, and has returned to the charge of the Hospital.

The women of the district are taking advantage of the help available, and are booking beds in advance for their confinements. It has been proposed to build a special maternity ward, but so far the requirements have been met by the ordinary women's ward, which is seldom required for general cases.

Rawene Hospital.

Chairman of Hospital Committee : William Stewart.

Usual date of meeting of Hospital Committee : First Saturday in month.

Medical staff, stipendiary : Alexander A. Macfarlane, M.B., Ch.B. (non-resident).

Matron: Helen B. Lones.

Localities, broadly, from which patients came : Hokianga County.

There have been several maternity cases, In this Hospital also the work has greatly increased. and it is proposed to build additional accommodation for this work.

For many months there was no doctor in charge of the Hospital, thus throwing much responsibility on the Acting-Matron.

Dr. Macfarlane has now been appointed.

Mrs. Lones, the Matron, has completed her course of midwifery training at St. Helens Hospital, Auckland, and is now prepared to take the maternity cases.

Kawakawa.

A small maternity hospital is being erected at Kawakawa, which should be a great benefit to the district.

In the meantime the Board is subsidising a trained and registered midwife to work in the district

MARSDEN-KAIPARA HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Second Saturday in each month.

Chairman: R. Y. Kernohan.

Secretary: C. McKinnon.

Public Health Inspector : A. E. Skynner. District Nurse : J. L. Ariell.

Institutions under the Board's control : Whangarei Hospital, Whangarei Cottage Home, Northern Wairoa Hospital.

Whangarei Hospital.

Chairman of Hospital Committee : R. Y. Kernohan.

Usual date of meeting of Hospital Committee: Second Saturday in month. Medical staff, honorary: T. Copeland Savage, M.B., B.S., F.R.C.S.; T. Hope Lewis, M.R.C.S. Medical staff, stipendiary: J. L. Fraser-Hurst, B.A., M.D. (resident at Hospital).

Matron : D. Giffney.

Localities, broadly, from which patients came : Whangarei County, 115 ; Whangarei Borough, 33 ; Bay of Islands, 24 ; Hobson County, 4 ; Auckland, 2 ; Waikato, 2 ; Christehurch, 1.

Visited on 12th February, 1912.

There were 14 patients in-1 woman and 10 men-and 3 in isolation ward.

The men's ward has been enlarged, and there are now 12 beds and a cot. 22 patients have recently been in hospital. Dr. Fraser-Hurst has asked for an increase of staff, and another probationer is coming. The staff consisted of Matron, two trained nurses, and two probationers.

Most of the cases in the male ward were fractures. There was one case of appendicitis, and one of appendicular abscess, which had been operated upon in the side ward.

The majority of the cases are surgical.

The wards and annexes are all in good order, but some of the outside parts are not very well kept.

The infectious-disease building is very neglected, and should be kept in better order.

The nurses' home will require an additional room or two. At present the Matron uses the nurses' sitting-room as a bedroom, and there is no place for the junior nurses.

The Board intends. after selling some property in the town, to build a house for the Medical Officer on the land which was recently purchased on the farther side of the Old People's Home.

So far the doctor has not been given permission to take private practice, but it is understood from the Secretary that after a time it is intended to allow this.

There is now a better system of collecting fees, the Matron giving the accounts and receiving payment, if possible, before the patient leaves Hospital.

Northern Wairoa Hospital.

Chairman of Hospital Committee : T. Bassett.

Usual date of meeting of Hospital Committee : Second Monday in month.

Medical staff, honorary : Dr. W. H. Horton, M.B.

Medical staff, stipendiary : J. R. Closs, M.B., B.S. (resident at Hospital). Matron : M. G. Atkinson.

Localities, broadly, from which patients came : Hobson County, 81; Dargaville Borough, 18; Otamatea County, 4; shipping, 3.

Visited, December, 1911.

There were eight patients in Hospital.

The wards did not look tidy nor did the grounds.

The Medical Superintendent has resigned.

Whangarei Cottage Home.

Chairman of Institutional Committee : R. Y. Kernohan. Usual date of meeting : Second Saturday in month.

Medical staff, stipendiary : J. L. Frazer-Hurst, B.A., M.D. (resident), part time.

Master : James Harker.

Matron : Mrs. Harker.

Localities from which inmates came: Whangarei, 23; Hobson, 6; Bay of Islands, 10; Otamatea, 4. Visited, February, 28th, 1912.

The alterations and additions to this Home have been completed.

There were 21 inmates, 3 being women.

The Home is now very comfortable, and is kept in excellent order by Mr. and Mrs. Harker, of whose care of the old people the doctor speaks very highly.

AUCKLAND HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Fortnightly on Tuesdays.

Chairman : Peter Mitchell Mackay. Secretary : H. N. Garland and one assistant.

Public Health Inspectors: C. T. Haynes, N. F. Furness, and W. Galloway.

Charitable Aid Inspector : A. Herbert Jones.

Dental surgeon : Å. H. Gleeson.

Dental lady assistant : Norma Harris.

Institutions under the Board's control: Auckland Hospital, Auckland Dental Hospital, Alexandra Home, Costley Home.

Auckland Hospital.

Chairman of Hospital Committee: P. M. Mackay.

Chairman of Hospital Committee : P. M. Mackay.
Usual date of meeting of Hospital Committee : Alternate Thursdays.
Medical staff, honorary : Helen Constance Frost, M.B., B.S. (Univ. N.Z.); Alfred Clark, F.R.C.S.,
L.R.C.P., Edin.; Joseph C. Pabst, M.B., B.S. (Univ. Melb.), M.D. (Melb.); J. Hardie Neil, M.B.,
Ch.B. (N.Z.), M.R.C.S. (Eng.), L.R.C.P. (Lon.); Bernard J. Dudley, M.R.C.S. (Eng.), L.R.C.P. (Lon.);
Geoffrey Bruton Sweet, M.B., M.S. (Melb.); Ernest Roberton, M.D., M.R.C.S. (Eng.); Herbert
Mayer Goldstein, M.B., B.S. (Lon.); G. Gore Gillon, M.D. (Univ. Glas.), F.R.C.S. (Edin.); Tracy R.
Inglis, B.M. (Univ. Melb.); Ernest H. Williams, M.B., Ch.B. (Univ. N.Z.); Sidney Arthur Stride,
L.A.S. (Lon.); Claude E. A. Goldicutt, M.D. (Edin.), D.P.H. (Camb.), Ch.B. (Edin.); T. Copeland
Savage, L.R.C.P. (Lon.), M.R.C.S. (Eng.), M.B., M.S. (Lon.).
Medical staff, stipendiary: C. E. Maguire, M.D.; R. J. English, M.B., Ch.B.; P. A. Ardagh,
M.B., Ch.B.; W. Abbott, M.B., Ch.B., (junior doctors), (residents).

Matron, M. H. Griffiths.

Localities, broadly, from which patients came : Waitemata County, 215 ; Auckland City, 1,380 ; Mount Eden, 160 ; Grey Lynn, Ponsonby, 372 ; Parnell, 180 ; Mount Albert, 151 ; other contributory districts, 684; non-contributory districts, 159; admissions from vessels in harbour, 175.

Visited in October, December, and February.

The wards and ward furniture were in good order, having been renovated recently.

15—H. 31.

It was pointed out that safer provision was needed for the lotion-bottles and better provision for the cupboard receptacle for scraps, rubbish, and soiled dressings.

The typhoid ward has been provided with additional verandah-accommodation and new sanitary fittings; but the Board recognizes that a new ward is needed for typhoid patients, and plans are being

prepared. The additions to the Nurses' Home are nearly completed. These additions will not cost much

less than £15,000. The Board has practically decided to dispense with the Hospital Committee, the latter to be a committee of the whole Board. The wisdom of this course is doubtful.

The honorary staff, which takes a most prominent part in the management of the Hospital, seems to be working well with the Board and the Medical Superintendent. The members of the staff have revised the theoretical and practical course of teaching considered necessary for the nurses, and lectures on different subjects have been undertaken by various doctors.

The resident staff is to undertake the clinical teaching in the wards.

In Dr. Maguire the Board appears to have a competent and painstaking officer, but an amendment to the by-laws is necessary defining his duties "as the officer primarily responsible for the efficient

management of the institution." It was evident that neither the Medical Superintendent nor the Secretary was working amicably with the Matron. Without doubt the Board will take action thereon.

The staffing of the Hospital has recently been reorganized, and the salaries of the sisters raised.

The wards have been separated into junior and senior wards. The salaries vary from £80 to £100

A Night Superintendent, to rank with the Assistant Matron, has been appointed at a salary of per annum.

£100 per annum. In the secretarial department, Captain Thomas has replaced Mr. Fenton, resigned. Further inquiries are being made as to the circumstances that led to the resignation of this officer.

Some members of the Board are very anxious to push on with the extension of the administrative block, but the erection of the new typhoid ward should be of first importance.

Alexandra Convalescent Home.

Chairman of Institutional Committee : P. M. Mackay.

Usual date of meeting : Alternate Thursdays.

Medical staff, honorary : D. N. W. Murray, B.M. (Edin.), B.S. (Edin.).

Master: E. J. Thomas, of Auckland Hospital.

Matron : Miss M. H. Griffiths, of Auckland Hospital.

Localities from which inmates came : From Auckland Hospital and district for convalescence. Visited on the 7th February.

The place was in excellent order. There were 8 patients.

Costley Home.

Chairman of Institutional Committee : John Jenkin.

Usual date of meeting : Fortnightly, on Tuesdays.

Medical staff, stipendiary : A. N. McKelvey (resident), (whole time).

Master: Dr. McKelvey.

Matron : Jane Forbes.

Localities from which inmates came : Auckland Hospital District.

Visited on 6th February.

There were 185 male and 52 female inmates.

A good many additions have been made to this Home. Rooms for six married couples, with a common sitting-room, a bathroom, and a lavatory have been built. The furniture is not yet in, but the place should soon be ready.

A building for the female staff has also been erected containing seven rooms and a sitting-room. The Matron's rooms will still be in the main building, and will be renovated and refurnished.

In the consumptive shelters were 4 women and 7 men.

The male chronic wards are better kept than formerly, and the old men are well cared for. These wards and the kitchen and dining-hall have been painted.

The whole place shows great improvement under the charge of Dr. McKelvey. Nurse Forbes is still Matron of the female department, and is doing good work.

The grounds are gradually being put in order.

WAIKATO HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Every fourth Thursday.

Chairman : John P. Bailey.

Secretary : W. I. Conradi.

Public Health Inspectors : Bennett, Franklin.

District Nurse : E. M. Smith.

Institutions under the Board's control: Waikato Hospital, Taumarunui Hospital, Old Men's

Home, Hamilton.

Waikato Hospital.

Chairman of Hospital Committee : John P. Bailey.

Usual date of meeting of Hospital Committee : Every fourth Thursday. Medical staff, stipendiary : H. Douglas, M.B., C.M.; J. M. Hyde, M.B., C.H.B. (residents). Matron : E. M. Rothwell.

Localities, broadly, from which patients came : Waipa, 140 ; Waikato, 183 ; Raglan, 40 ; Waitomo 71 ; Piako, 60 ; Matamata, 19 ; Hamilton, 175 ; Rotorua Town, 30 ; Rotorua, 21 ; Kawhia, 27 ; Cambridge, 33 ; Frankton, 53 ; Taupo West, 37 ; Huntly, 67 ; Te Aroha, 42 ; Morrinsville, 37 ; Tau-

marunui, 30; and others, 162.

Visited on 16th February, 1912.

There were 90 patients in-24 women and children.

The wards were all in good order. There is a good staff of nurses, and everything is working well. The domestic staff is not so satisfactory.

Additions were being made to the Nurses' Home-ten bedrooms, a sisters' sitting-room, and bathroom and lavatory.

It will not be long before the Board will be called upon to erect a new ward, as the demands on this Hospital have increased very much of late. A consumptive annexe of six beds is to be erected forthwith.

The Board has very wisely decided to make fresh arrangements with regard to the water-supply of the institution.

Old Men's Home, Hamilton.

Chairman of Institutional Committee : John P. Bailey.

Usual date of meeting : Same as Waikato Board.

Medical staff, stipendiary: H. Douglas, M.B., C.M., Hospital Surgeon Superintendent (when required).

Master: L. Holmes.

Matron: Bessie Holmes.

Localities from which inmates came : Waikato Hospital District.

Visited on 16th February.

The Home was in better order than I have previously seen it. The old men all seemed well and contented. When ill they are removed to the Hospital for treatment.

Taumarunui Hospital.

Chairman of Hospital Committee : John P. Bailey.

Usual date of meeting of Hospital Committee : Same as Waikato. Medical staff, stipendiary : Ernest H. Howard, M.B., Ch.B., M.R.C.S., L.R.C.P. (non-resident).

Matron : G. L. Robinson.

Localities, broadly, from which patients came : Taumarunui, 30; Ohura, 6; Wanganui River districts, 2; Kaitieke, 19. Visited on 16th February, 1912, in the evening. There were no patients. Sister Stevenson, who was in charge, was away at Te Kuiti for the day,

and Nurse McAllum (a probationer) was acting in her absence. She and the sister manage all the inside work. It is not often that there are no patients; there are frequently six or seven.

Dr. Douglas does not consider the probationers from the base hospital lose anything by being sent on duty here. As a rule, they stay only two months, and get useful experience in emergency work, and in management, cooking, &c.

The place was in good order.

THAMES HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Wednesday in month.

Chairman : Thomas Kilgour.

Secretary : J. E. Banks.

Public Health Inspector: B. A. Franklin.

Institutions under the Board's control : Thames Hospital, Old People's Home, Thames.

Thames Hospital.

Chairman of Hospital Committee : Thomas Kilgour.

Usual date of meeting: First Wednesday in month.

Medical staff, stipendiary : D. B. Walshe, M.B., B.Ch. (resident). Matron : M. Wilson.

Localities from which patients came : Thames Hospital District, 589; Coromandel, 1; North Auckland, 2; Waihi, 4; Sydney, 1; Auckland, 14; Palmerston, 1; Waikato, 17; Dunedin, 1; Gisborne, 1; Napier, 1. Visited on 14th February, 1912.

There were 19 male patients and 16 women in, and 2 cases in the consumptive shelters.

Among the patients were 6 enteric-fever cases, 4 being Maoris.

There was a case of sceptic poisoning in a man from the Piako Swamp, on the Hamilton Plains. It is anticipated that there will be a good many enteric patients from there, as there is no good watersupply, the water from the swamps being very bad.

An old man from the Tarua Ĥome was accommodated in the D.T. ward ; he was too troublesome for the general ward.

No decision has yet been come to by the Board with regard to the additions and alterations. Dr. Walshe does not consider any further accommodation for general cases is necessary at the present time or for some years, but is very anxious for some provision for infectious cases and for the old people whom it is necessary to bring in from the Home, and who are not fit for the medical ward. About four beds for men and two for women would be sufficient.

The wards and outbuildings were all in excellent order.

District Home, Thames.

Chairman of Institutional Committee : Thomas Kilgour.

Usual date of meeting: First Wednesday every month. Medical staff, stipendiary : D. B. Walshe, M.B., Ch. (Melb.), (non-resident), part time.

Master: R. Hay-Chapman.

Matron : Mrs. R. Hay-Chapman.

Localities from which inmates came : Thames and Ohinemuri, 43; Coromandel, 1; Waihi, 1; Waikato, 1.

Visited on 14th February, 1912.

There were 25 inmates-only one a woman.

The old people looked very well, and seemed contented.

Only one man was in bed, but he was not always confined there.

The Homes are not very well kept. The floors are very dirty, and the walls, especially of the sanitary offices, badly need scrubbing and a fresh coat of paint. The old men scrub the floors with deck-scrubbers, and they do not effect much improvement.

The old beds are still in use, and many of them are not fit for such. Only fairly able-bodied men work in the garden, from which the Hospital is now supplied with vegetables. A strong porter, should, I think, be employed to do the necessary cleaning.

There are at present no very dirty cases.

The new sceptic tank for the Women's Home, in which the Master and the Matron reside, does not seem satisfactory. There was a very offensive odour from it. I informed Inspector Franklin of this, who will look into the matter.

COROMANDEL HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Third Monday in each month.

Chairman : Samuel James.

Secretary : Richard Simmonds (part time).

Public Health Inspectors : William Lee, Mercury Bay district ; James R. Gardiner, Coromandel district.

Charitable Aid Inspector : Philip J. Brown.

Coromandel Hospital.

Chairman of Hospital Committee : Samuel James. Third Monday in each month. Usual date of meeting of Hospital Committee:

Medical staff, honorary : J. J. Eade, M.B., B.S. Medical staff, stipendiary : John Craig, L.R.C.S., L.R.C.P. (non-resident).

Matron : Annie Sellars.

Localities, broadly, from which patients came : Coromandel, 81.

Visited on the 8th February.

There were 6 patients-2 men, 2 women, and 2 children. No serious cases.

Three rooms have been added for the staff at the back of the Hospital, and two small rooms in front are now used as a waiting-room and a consulting-room for the doctor respectively. A skylight has been put in the theatre, and a new high-pressure dressing-sterilizer provided.

Although my visit was at 6.15 a.m., the place was in very good order. The Chairman informed me that the Matron (Miss Sellars) is giving great satisfaction to the Board and the doctor.

There are a staff nurse and two probationers.

There is one case in the isolation cottage.

It is proposed to build a house for the doctor, who is at present living some distance away, and whose house is not connected with the telephone. There is plenty of room for a house on the property. A good deal of out-patient work is done—103 patients so far for the year—and the Matron

occasionally goes out with the doctor to a private case.

WAIHI HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Last Friday in each month.

Chairman : Dawson Donaldson. Secretary : F. Bishop.

Public Health Inspector : T. H. Erwin.

Institutions under the Board's control : Waihi Hospital.

Waihi Hospital.

Chairman of Hospital Committee : Dawson Donaldson.

Usual date of meeting of Hospital Committee : Last Friday in each month.

Medical staff, stipendiary : C. H. Robertson, F.R.C.S. (Eng.), M.B. (Lon.), (non-resident); G. Craig, M.B., M.S. (Edin.), (non-resident). Matron: Janet McGregor.

Localities, broadly, from which patients came : Waihi, 448; Thames, 201; Waikato, 18; Bay of Plenty, 28; Auckland, 5; Wanganui, 1; Christchurch, 1; Nelson, 1. Visited on 15th February.

There were 13 cases in the female wards—7 in the surgical. In the men's surgical ward there were 12 cases, and an amputation case in the side ward. In the medical ward there were 3 cases only -one a convalescent enteric.

A great defect in the new ward is that the cupboards for patients' clothes are built in the walls of the ward, and open into the ward.

The sanitary tower to this ward is very good, and well arranged.

The operating-theatre has proved very satisfactory. The wards were in good order.

There were 10 cases (8 children and 2 adults) in the fever ward.

There is a fine vegetable-garden, giving a very ample supply to the Hospital. The gardener is paid £2 per week.

The Matron does the dispensing. She finds that being obliged to get all the household supplies locally adds greatly to the expense.

Dr. Robertson has taken over the charge of the Hospital again. Everything has gone very well during his absence. Dr. Borrie has been especially good in instructing the nurses.

BAY OF PLENTY HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: None. Generally once a quarter, with committee meetings between.

Chairman : A. Peebles.

Secretary: H. O. Caraway (part time).

Public Health Inspector: John Landells.

There are no institutions under this Board's control.

WAIAPU HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Fourth Monday in each month. Chairman : Arnold B. Williams.

Secretary : A. L. Temple. Public Health Inspector : W. J. P. Terry.

District Nurse : - Parker.

Institutions under the Board's control: Waiapu Hospital, Te Puia Springs; Te Araroa Nursing Home, Te Araroa.

Waiapu Hospital, Te Puia.

Chairman of Hospital Committee : A. B. Williams.

Usual date of meeting of Hospital Committee : Fourth Monday in each month.

Medical staff, stipendiary : Cyril Stephen Davis, M.D., D.P.H., M.R.C.S. (Eng.), L.R.C.P. (Lon.). Matron : E. M. Shillington.

Localities, broadly, from which patients came : Waiapu County.

The work of this Hospital was largely increased by an outbreak of typhoid in the district.

Many patients were treated in an isolation camp at Tuparoa, but it was also necessary to erect a tent in the Hospital grounds to accommodate more.

The nurse appointed for district work under the Board has now commenced her work in the district. Miss Shillington has been granted three months' leave of absence. The maternity annexe has not yet been erected.

Te Araroa.

There has been erected here a small cottage house for the Maori settlers. It is to be used principally as a residence for a nurse, who will work among the Natives in the surrounding district, and with a room for emergency cases.

A nurse has not yet been permanently appointed, but an officer of the Department has been sent there to inaugurate the work.

COOK HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Third Friday in every month. Chairman: Hon. Capt. Tucker, M.L.C. Secretary: H. M. Porter (part time). Public Health Inspector: F. O. York.

Native Nurse : Jean Cormack.

Institutions under the Board's control : Gisborne Public Hospital, Old People's Home.

Gisborne Hospital.

Chairman of Hospital Committee: Hon. Capt. Tucker, M.L.C.

Usual date of meeting of Hospital Committee : Third Friday in each month.

Medical staff, stipendiary: J. E. K. Brown, M.B., Ch.B. (resident); W. Carlile Wilson, M.A., M.B., B.Ch., F.R.C.S. (non-resident). Matron: E. F. Godfray.

Localities, broadly, from which patients came: Gisborne Borough, Cook County, and Waikohu County

Visited 11th November, 1911.

There were 42 patients in hospital, 7 being typhoid cases.

Considering the age of this Hospital, the wards were in fair order.

The accommodation of the institution is at times taxed to the utmost, and all concerned must be glad that a tender has been accepted for a new building. £45,000 seems a great deal for a district of this size to spend on a new Hospital, but it must be remembered that this sum also includes a nursing home, an infectious diseases ward, and, in fact, all the buildings necessary to a hospital.

If adequate hospital accommodation were now available there would undoubtedly be a great increase in the demands for admission.

On looking over the books, I ascertained that no less than 75 cases of typhoid had been admitted to the Hospital in eleven months, and of this number 22 were Maori patients. Feeling sure that there must be a number of unnotified cases in the Maori kaingas, I instructed Miss Bagley (Superintendent of Maori nurses) to visit the suspected localities, with the result that 2 cases were discovered and removed to the hospital or accommodated in an improvised hospital at

To further the efforts of the Department in this direction, the Board appointed Inspector York (late Inspector for the Wellington Hospital Board) Sanitary Inspector for the district. The efforts of the above officers are already having a good effect.

Old Men's Home, Gisborne.

Chairman of Institutional Committee : Hon. Capt. Tucker, M.L.C.

Usual date of meeting: Third Friday in each month.

Medical staff, stipendiary : The Hospital House Surgeon.

Master: R. C. Vigis.

Localities from which inmates came: Cook and Waikohu Counties, 12; Gisborne Borough, 14. Visited, 11th November, 1911.

There were 16 patients in hospital, 2 being females.

The whole place looked very clean and tidy, and the inmates expressed themselves as being very comfortable.

Since my last visit a new addition has been made, which can accommodate 4 females.

Wairoa Hospital.

Chairman of Hospital Committee: John Hunter Brown. Usual date of meeting of Hospital Committee : Saturday following second Friday in month. Medical staff, stipendiary : John Miller, L.R.C.S., L.R.C.P., L.F.P.S. (Glas.) (non-resident).

Localities, broadly, from which patients came: Wairoa County and Borough, 148; Cook County, 1; Tauranga, 1; Wellington, 1; Hastings, 2. Matron : Alice J. Bull.

HAWKE'S BAY HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Monday in each month.

Chairman: W. Shrimpton. Secretary: James Scheele and two assistants.

Public Health Inspector: F. B. Gardiner.

Institutions under the Board's control : Napier Hospital-General Hospital, Hospital for Chronic Diseases, Hospital for Infectious Diseases; Old People's Home, Park Island; Home for Aged and Infirm; Wairoa Hospital—General hospital.

Napier Hospital.

Chairman of Hospital Committee : W. Shrimpton.

Usual date of meeting of Hospital Committee : Second Monday in each month.
Usual date of meeting of Hospital Committee : Second Monday in each month.
Medical staff, honorary : H. F. Bernau, M.R.C.S., L.R.C.P.; J. J. Edgar, M.B., C.M., L.R.C.P.,
L.R.C.S.; J. P. D. Leahy, M.A., M.B., M.S.; H. M. Wilson, B.A., M.B., Ch.B. (Camb.).
Medical staff, stipendiary : Thomas Gilray, M.B., Ch.B. (N.Z.), F.R.C.S. (Edin.); H. O. Callaghan,

M.B., Ch.B. (N.Z.) (residents)

Localities, broadly, from which patients came: Napier Borough, 334; Hastings, 143; Hawke's Bay County, 184; Park Island, 42; Taradale, 26; Wairoa, 21; other districts, 32. Visited in July and November, 1911.

There were 62 patients in the Hospital.

In November an inquiry was made with reference to certain grievances on the part of members of the nursing staff. This inquiry resulted in complete exoneration of the Matron. It is to be regretted

that Miss Berry has since resigned, as during the term of her office she had always shown herself to be an efficient and conscientious officer. Miss Macdonald was appointed Matron in place of Miss Berry.

During the year Dr. Wilson, who had done such good service, resigned. His place was filled by Dr. Aickin, who has since resigned, and Dr. Gilray, late assistant at the Wellington Hospital, appointed in his place.

Old People's Home, Park Island.

Chairman of Institutional Committee : W. Shrimpton.

Usual date of meeting : Third Tuesday in each alternate month.

Medical staff, stipendiary: Thomas Gilray, M.B., Ch.B. (N.Z.), F.R.C.S. (Edin.), part time. Master: W. H. Hichens.

Matron: Mrs. A. Hichens.

Localities from which inmates came: Napier, 39; Hastings, 9; Hawke's Bay County, 44; Waipawa, 20; Waipukurau, 9; Dannevirke, 22; Woodville, 4; Weber, 1; Patangata, 2; Wairoa, 9; Pahiatua, 1.

Visited in July and November.

This institution is now satisfactorily managed by the new Master and Matron, Mr. and Mrs. Hickens.

WAIPAWA HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Thursday in month alternately at Waipukurau and Dannevirke. Chairman : A. E. Jull.

Secretary : G. B. Ashley and one assistant. Public Health Inspector : F. Gardiner (in conjunction with Hawke's Bay Hospital and Charitable Aid Board).

Institutions under the Board's control: Waipukurau Hospital, Dannevirke Hospital.

Waipawa Hospital, Waipukurau.

Chairman of Hospital Committee : A. E. Jull. Usual date of meeting of Hospital Committee : Second Thursday in month.

Medical staff, stipendiary : S. C. Godfray, M.B. (Edin.), (non-resident).

Matron: M. E. Carston.

Localities, broadly, from which patients came : Dannevirke County, 56; Dannevirke Borough, 13; Waipawa County, 53; Waipawa Borough, 20; Waipukurau County, 14; Waipukurau Town, 39; Patangata County, 26; Hawke's Bay, 26; Woodville, 13; Lindsay, 16; no address, 22.

Visited on 21st May.

There were 17 patients in-11 male and 6 female.

The women's and children's wards, recently added, are a very great improvement to this Hospital, but the number of beds is in excess of what is required for this district, and are seldom all occupied.

The administration block, if not to be rebuilt during the next few years, badly needs renovation, the linoleum on the main hall is quite worn out. The tiles of the operating-theatre floor have worn very badly. The walls have been re-cemented and painted, and look very well.

The Hospital generally was in good order.

The old women's ward, a part of which is used for an ironing-room, could be converted with small expense into a maternity ward for two or three beds.

Dannevirke Hospital.

Chairman of Hospital Committee: G. J. E. Bickford.

Medical staff, stipendiary : Thomas Macallan, M.B., C.M. (Aberd.); W. H. Dawson, M.B., C.M., D.P.H., F.R.C.S. (Edin.).

Matron: Georgina Hopper.

Localities, broadly, from which patients came : Dannevirke Borough, 127 ; Dannevirke County, 95 ; Woodville County, 6 ; Weber County, 218 ; Akitio County, 12 ; Palmerston North, 2 ; Wellington, 4 ; Dunedin, 1 ; Patangata County, 1 ; Napier, 3 ; Christchurch, 1 ; Gisborne, 1 ; Auckland, 1 ; Taumarunui, 1.

Visited on 9th December, 1911.

There were 24 cases in, 7 of these in the women's ward.

The new operating theatre had been finished since my last visit, and is very satisfactory. The new sanitary annexes for the male ward are also a very great improvement. The Hospital was in excellent order. The Matron finds that it is an easily worked hospital, every-

thing being very conveniently planned.

TARANAKI HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Third Wednesday in month.

Chairman : F. C. J. Bellringer.

Secretary : C. M. Lepper, and one assistant.

Public Health Inspector : A. H. Kendall. District Nurse—Uruti : J. Kennedy.

Institutions under the Board's control: New Plymouth Hospital, Old People's Home.

H.--31.

120

New Plymouth Hospital.

Chairman of Hospital Committee : F. C. J. Bellringer.

Usual date of meeting of Hospital Committee : Third Wednesday in month. Medical staff, stipendiary : E. A. Walker, M.D.; D. S. Wylie, F.R.C.S.; H. B. Leatham, M.R.C.S.; G. Home, M.D., (non-residents).

Matron: Elizabeth Browne.

Localities, broadly, from which patients came: Taranaki County, 155; Egmont County, 26; Clifton County, 49; New Plymouth, 99; Inglewood, 19; Waitara, 36; St. Aubyn Town Board, 4; Fitzroy Board, 21; Awakino, 16; Stratford, 3; Palmerston, 2; Auckland, 3; Hawera, 11. I visited the Hospital on the 29th December.

There were 36 patients-18 men, 13 women, and 4 children.

Several changes have been made since my last visit, the wards and sanitary annexes having been renovated and painted. The nurses' dining-room was being turned into a ward for children, and another room near the kitchen used as a dining-room.

There was one patient in a consumptive shelter; none in the fever ward.

The wards were, as usual, in very good order. The Hospital is now supplied with milk from cows belonging to the institution.

The site of the Old People's Home was being levelled in preparation for the new Hospital building

Old People's Home, New Plymouth.

Chairman of Institutional Committee : F. C. J. Bellringer. Usual date of meeting : Third Wednesday in month.

Medical staff, stipendiary : G. Home (non-resident), part time.

Matron : Annie Bayly.

Visited on 29th December.

The new site to which the Home has been moved seems very suitable for the purpose.

The old people seem content, and do not seem to mind very much that they are further away from town. Several of the old men died during the winter, and the Matron had been up night and day when they were sick. The inmates speak highly of Mrs. Bayly's kindness and attention, and she appears to manage them well.

The place was in excellent order. A great difficulty so far from town is the domestic staff.

Cows are kept for the milk-supply of the institution, and sufficient vegetables are also grown for the needs of the Home.

STRATFORD HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Wednesday in every month.

Chairman : Edward Marfell.

Secretary: I. Harry Penn, part time.

Public Health Inspector: A. Gray.

Institution under the Board's control : Stratford Hospital.

Stratford Hospital.

Chairman of Hospital Committee : Edward Marfell.

Usual date of meeting of Hospital Committee : First Tuesday in every month. Medical staff, stipendiary : David Stephen, M.B., B.Ch. (non-resident).

Matron : Meta Ô'Brien.

Localities, broadly, from which patients came: Stratford Borough, 55; Stratford County, 36: Whangamomona County, 63; elsewhere, 8.

I visited the Stratford Hospital on the 28th December, 1911.

There were 9 patients in -2 men, 3 women, and four children.

Miss O'Brien was absent on her holiday. Nurse McLean, from Dunedin, was in charge.

I saw Dr. Stevens, who said that the work of late had been very light.

The wards were in good order.

A large quantity of vegetables are grown by the gardener.

HAWERA HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Third Monday in each month.

Chairman : R. H. Nolan. Secretary : C. E. Parrington, part time.

Public Health Inspector : A. Gray.

Native Nurse : C. Beetham, Okaiawa.

Institution under the Board's control : Hawera Hospital.

Hawera Hospital.

Chairman of Hospital Committee : R. H. Nolan

Usual date of meeting of Hospital Committee : Third Monday in each month.

Medical staff, stipendiary : W. M. Thomson, M.A., M.B., B.Ch. (non-resident).

Matron: G. Clapcott.

Localities, broadly, from which patients came: Hawera, 158; Manaia, 32; Kaponga, 24; Eltham, 41.

Visited in January and on the 6th April, 1912.

Part of this building has fallen into disrepair, and the Board therefore contemplates the erection of a new hospital. I explained to the Chairman (who takes a great interest in this institution) that it would be better to acquire additional land in the neighbourhood of the institution than embark on a new building. An additional piece of land adjoining the Hospital was accordingly acquired. By this means the Board will ultimately be able to erect a new institution without being cramped for room. But the time for a new hospital is not yet.

PATEA HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Tuesday in month.

Chairman : H. O. Clarke.

Secretary : E. C. Horner, part time. Public Health Inspector : F. C. Wilson.

Institution under the Board's control : Patea Hospital.

Patea Hospital.

Chairman of Hospital Committee : H. O. Clarke. Usual date of meeting of Hospital Committee : Second Tuesday in each month.

Medical staff, honorary: A. G. Harvey, M.D. Medical staff, stipendiary: W. T. Simmons, M.B. (non-resident).

Matron: Miss L. Scolon.

Localities, broadly, from which patients came : Waitotara to Hawera County, 78; Waitotara to Hawera Borough, 50.

Visited, February, 1912. There were only 5 patients in hospital—3 in the female ward and 2 in the male ward.

The place was in excellent order-very different from the condition found when I last inspected this pleasantly situated little Hospital.

WANGANUI HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Third Wednesday in month. Chairman: William Ritchie.

Secretary: A. C. Ritchie.

Public Health Inspector: Thomas Pargeter.

Institutions under the Board's control : Wanganui Hospital, Taihape Hospital, Jubilee Home, Aramoho.

Wanganui Hospital.

Chairman of Hospital Committee: William Ritchie.

Usual date of Committee meeting: Third Wednesday in month.

Medical staff, honorary: C. B. Innes, M.B., Consulting Physican; H. R. Hatherley, M.R.C.S., Consulting Surgeon; J. Maunderson, M.D., C.M.; J. Harper Reid, M.B., Ch.B.; A. H. Wall, M.R.C.S., M.B.; A. J. Crawford, M.D., F.R.C.S., Visiting Surgeons.

Medical staff, stipendiary : J. Reid, M.A., M.B., Ch.B. (resident). Matron : C. McKenny.

Localities from which patients came : Wanganui Borough, 472 ; Taihape Borough, 18 ; Marton Borough, 51 ; Wanganui East Borough, 21 ; Wanganui County, 62 ; Waitotara County, 55 ; Rangibirough, 51; Waingahu hast borough, 21; Waingahu county, 52; Wainotata county, 55; Kangtike County, 53; Waimarino County, 19; Bull's, 11; Gonville, 21; Hunterville, 2; Castlecliffe, 25; Mangaweka, 11; Palmerston North, 5; Ohakune, 9; Patea, 3; Napier, 2.
Visited, 9th April, 1912.
There were some 66 patients in Hospital—rather less than usual. There was the usual proportion

of chronic patients, who, pending the erection of a chronic ward, can hardly be treated elsewhere. The wards, &c., were in excellent order.

The new open-air ward was in course of construction, and should be available for patients in a few weeks.

Having heard vague rumours as to delay on the part of the honorary staff in attending to patients, I was particularly careful to make inquiries in that direction. One patient, admitted for peritonitis, and on whom the honorary surgeon had decided an operation was necessary, had been in the hospital two days, and no operation had so far been performed. On asking the Medical Superintendent why he did not operate on cases such as this, where an operation, in his opinion, was necessary, he replied that he could not do so without the leave of the honorary surgeon, to whom the case was assigned. The absurdity of this system struck me so forcibly that I minuted the patient's card to that effect, and subsequently discussed the matter with three members of the honorary staff and the Medical Superintendent.

I was also surprised to hear that some of the honorary surgeons would not even allow the Medical Superintendent to set fractures. The whole position seems absurd. No notes are taken of the cases. I pointed this out to the honorary staff.

I think it is high time that an Assistant House Surgeon was appointed here, especially as the Medical Superintendent told me that operations were often delayed because he was reluctant to call in the services of the honorary staff to give an anæsthetic. I asked Dr. Wall to try and shake the honorary staff together, but I fear it will be difficult to get

out of some the work that a hospital of this size has a right to.

16-H. 31.

H.---31.

122

Taihape Hospital.

No special Committee; directly administered by Board. Medical staff, honorary: E. C. Barnett, M.R.C.S., L.R.C.P.; T. B. Whitton, M.D., L.R.C.S.; R. B. Turnbull, M.B., Ch.B., D.P.H.; A. D. Nelson, M.B., Ch.B.; H. E. Owen, L.R.C.P.

Medical staff, stipendiary : R. J. Boyd, M.D., M.S. (resident).

Matron : E. Southall.

Localities from which patients came : Taihape and Waimarino.

Visited on 10th July, 1911, and 16th February, 1912.

The Hospital was opened on the 29th May, and from the nature of the cases admitted and the work done, it is evident that the original intention to use this institution as a cottage hospital for emergency cases is not being adhered to.

There had been 82 patients admitted from the opening until the last visit, and of these, 61 operations had been entered in the operation-book. About a third of these operations were major ones; the remainder were minor operations, or dresings under anæsthetics.

The Hospital has frequently been overfull, and no attempt has been made to send patients on to

Wanganui. Dr. Boyd is in charge, and a Matron and a sister were appointed from the Wanganui Hospital. There are two probationers, but these are not sent on for training to the base Hospital.

The prices paid for goods are high, no tenders having been called.

The place was in good order. It is conveniently planned, but the work of laying the floors of the operating-room and sanitary annexes has not been well done, and there are already large cracks. It will probably be necessary to have a new floor for the theatre. Electric light is to be installed. At present lamps are used.

Jubilee Home.

Chairman of Institutional Board : William Ritchie.

Usual date of meeting: Third Wednesday in month.

Medical staff, stipendiary : James Reid, M.A., M.B., Ch.B.; Medical Superintendent of the Wanganui Hospital.

Master: Samuel J. Allen. Matron: Mrs. Allen.

Localities from which inmates came: Wanganui Borough, 29; Marton Borough, 1; Wanganui County, 5; Bull's, 1; Rangitikei County, 10; Hunterville, 2; Patea, 5; Taihape, 1; Waitotata County, 2.

Visited, 8th April.

The place was in excellent order.

PALMERSTON NORTH HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Thursday in each month.

Chairman : James Glenny Wilson. Secretary : William Stubbs.

Public Health Inspector : Morgan O'Brien.

Relieving Officer : Frederick Aishe.

District Nurse : Annie Louergan, controlled by St. John Nursing Division, subsidized by Board. Institution under Board's control : Palmerston North Hospital.

26 acres of land have been obtained for a site for an Old People's Home, which it is hoped the coming year will see established.

Palmerston North Hospital.

Chairman of Hospital Committee : James Glenny Wilson.

Usual date of meeting of Hospital Committee : When necessary. Medical staff, stipendiary : A. A. Martin, M.D., Ch.B., F.R.C.S. (Eng.); P. T. Putnam, M.D., Ch.B.. Surgeons; C. W. Peach, M.D., M.S., Anæsthetist, (non-residents). Matron: Mary McLagan.

Localities, broadly, from which patients came : Palmerston, 694 ; Wellington, 38 ; Wanganui, 16 ; Waikato, 5; Auckland, 4; Hawera, 1; Nelson, 1; Napier, 7; Wairarapa, 4; Waipawa, 9; Waikat Wairau 1; Thames, 1.

Visited, February, 1912.

There were 38 patients in.

As usual, the Hospital was in excellent order.

There is a proposal to erect a children's ward, but I hope the Board will complete and furnish the new but hitherto unoccupied ward before embarking on further expenditure.

The Board is providing additional accommodation for female cases of consumption. The Board has at last decided to erect an Old Peoples' Home. An excellent site has been chosen, and when the Home is open it will be possible to accommodate chronic and incurable patients there who now occupy beds at the Hospital.

Wellington Hospital and Charitable Aid Board.

Usual date of meeting: Third Tuesday in every month. Chairman: Rev. W. A. Evans.

Secretary : J. Coyle, and three assistants (one part time).

Public Health Inspectors: B. S. Reed and J. T. Hopkins.

Inspector of Charitable Aid : Miss A. Kirk.

Institutions under the Board's control: Wellington Hospital, which includes Victoria Home for Chronic Invalids, Children's Hospital, Infectious-diseases Hospital, Seddon Annexes for Consumptives, Nurses' Home ; Ohiro Home—Benevolent Institution ; Otaki Hospital ; Otaki Sanatorium.

Wellington Hospital.

Chairman of Hospital Committee: R. Clement Kirk.

Usual date of meeting of Hospital Committee : Second Thursday in each month.

Medical staff, honorary: Surgeons—F. C. Faulke, L.R.C.P., F.R.C.S.; W. E. Herbert, Ch.B.,
M.D., F.R.C.S. (Edin.); M. Holmes, M.D., F.R.C.S. (Edin.); D. J. McGavin, F.R.C.S. (Eng.),
M.D., L.R.C.P. (Lon.): physicians—W. K. Fyffe, M.B., B.S. (Camb.), M.R.C.P., L.S.A. (Lon.);
E. W. Giesen, M.R.C.S. (Eng.), L.R.C.P. (Lon.), M.B., C.B.; C. D. Henry, B.S. M.B. (Camb.);
P. McEvedy, M.B., B.S., M.R.C.S., L.R., C.P. (Eng.); St. J. A. Tolhurst, M.D., B.S., M.R.C.S.,
L.R.C.P. (Lon.): ophthalmic surgeons—G. W. Harty, M.B., B.S., F.R.C.S. (Edin.); C. F. G.
Webster, M.R.C.S. (Eng.), M.B. (Camb.): dentist—H. Didsbury: masseur—Royd Garlick; masseuse-E. Everitt.

Medical staff, Children's Hospital: Surgeons-C. M. Begg, M.D., B.S., F.R.C.S., L.R.P.S.; H. J. McLean, M.B., F.R.C.S. (Edin.) : physicians-Agnes Bennet, M.B., M.D., M.S. (Edin.) ; Daisy E. Platts-Mills, M.B., Ch.B.

Medical staff, stipendiary: H. Hardwick-Smith, M.B., B.S., B.A. (Cantab.), F.R.C.S. (Eng.); R. Woodhouse, M.B., Ch.B.; H. Robertson, M.B., Ch.B.; T. C. Fraser, M.B., Ch.B. (residents). Matron : F. K. Payne.

Localities, broadly, from which patients came: Wellington City, 1,958; Wellington suburbs, 403; Petone, 175; Lower Hutt, 111; ships in port, 86; sundry small places, 59; Upper Hutt, 52; not stated, 45; Porirua, 14; Wairarapa, 19; Levin, 12; Masterton, 9; Westport, 9; Dunedin, 8; Paekakariki, 8; Auckland, 6; Hawke's Bay, 6; Blenheim, 4; Foxton, 4; Pahautanui, 4; Hastings, 4; Palmerston North, 3; Taranaki, 3; Nelson, 3; Marlborough, 3.

The Wellington Hospital has been visited on several occasions during the year.

A considerable amount of work has been done since the last report in adding to the efficiency of the Hospital. A children's department has been built, and was opened on the 13th March, but is not yet occupied. It is badly needed, as the children are scattered through the wards of the main hospital, and a number are at the Victoria chronic wards. As the beds are urgently required for adult patients, it is important to put the children in the wards intended for them as soon as possible.

Improvements in the sanitary annexes of the main wards have been made, these being practically rebuilt.

Some additions to the trained nursing staff have been made in connection with the Victoria and Seddon wards in appointing charge nurses to work under the sister in charge.

Fever Hospital, Wellington.

Visited on the 2nd April, 1912.

There were 28 patients in hospital.

Since the opening, fourteen months ago, there have been 225 cases, no deaths, and only one case of infection of a nurse.

The Keen's cement walls of the male admission-room are very badly cracked, and should be repaired.

An airing-room for blankets, &c., is badly needed.

The staff of nurses at this institution, with the nursing of the patients, ambulance duty, and so much cleaning of glass, paint-work, &c., where no maidservants are admitted, is scarcely adequate.

Ohiro Home.

Chairman of Institutional Committee: J. W. McEwan.

Usual date of meeting : Tuesday in each week.

Medical staff, stipendiary: H. Hardwick-Smith (the Medical Superintendent of the Wellington Hospital).

Master : A. H. Truebridge.

Matron : Mrs. A. Truebridge.

Localities from which inmates came : Wellington Hospital District.

Visited on the 9th April, 1912.

There were 112 inmates-31 women and 81 men.

Among the women was a young woman sent in by the Charitable Aid Office for observation. Her condition appeared to be mental.

There were two men in bed in the sick ward, one of whom, over 90 years of age, was dying, and I consider required more experienced nursing attention than is provided in that institution.

The institution was generally in good order, though the Matron, Mrs. Truebridge, was ill, and off duty.

Otaki Hospital.

Chairman of Hospital Committee : William Tompsitt.

Usual date of meeting of Hospital Committee : First Saturday in each month.

Medical staff, honorary : H. C. Faulke, F.R.C.S., L.R.C.P. (Edin.). Medical staff, stipendiary : W. H. J. Huthwaite, M.R.C.S., L.R.C.P. (Lon.) (non-resident). Matron: E. M. Sealy.

Localities, broadly, from which patients came : Shannon, 11; Levin, 21; Ohau, 6; Manakau, 15; Otaki 54; Te Horo, 4; Waikanae, 20; Paraparaumu, 3; Wellington Hospital, 1. Visited on the 22nd May.

There were only 8 patients in, 3 of whom were women.

The Hospital was in excellent order.

Otaki Sanatorium.

Chairman of Hospital Committee: William Tompsitt.

Usual date of meeting of Hospital Committee : First Saturday in month. Medical staff, stipendiary : W. H. J. Huthwaite, M.R.C.S., L.R.C.P. (Lon.) (non-resident). Matron : E. M. Sealy.

Localities, broadly, from which patients came : Eketahuna, 1; Wanganui, 1; Horowhenua, 1; am, 1; Wairarapa, 5; Palmerston North, 1; Napier, 1; New Plymouth, 1; Wairoa, 1; Eltham, 1; Wellington district, 39.

Visited on the 22nd May.

There were 22 patients in, 9 of whom were women. Two cases were confined to bed. One patient had been there for eighteen months.

The shelters are improved by a cement path in front, which renders it easier to keep them clean. Everything was in good order.

WAIRARAPA HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Wednesday each alternate month.

Chairman : E. G. Eton.

Secretary : N. D. Bunting.

Public Health Inspectors: James Cairns and Charles W. Miller.

District Nurses (2) : will be appointed during the current month (May). Institutions under the Board's control : Masterton Hospital; South Wairarapa Hospital, Greytown; Pahiatua Hospital, Pahiatua; Renall-Solway Old Peoples' Home.

The Martinborough Ambulance Society and the Masterton division, St. John Ambulance Society, provide for the transport of the sick, and render first aid to the injured.

Masterton Hospital.

Chairman of Hospital Committee: J. B. Keith.

Usual date of meeting of Hospital Committee : Third Tuesday in each month. Medical staff, honorary : P. R. Cook, M.B., Ch.B.; J. A. Cowie, M.B., &c., M.S., B.Sc.; N. H Prior, M.B., Ch.B.

Medical staff, stipendiary : Archer Hosking, M.B., M.S. (non-resident).

Matron: Maude G. Hayward.

Localities, broadly, from which patients came : Masterton Borough, 108; Masterton County, 70; Carterton Borough, 6; Wairarapa South County, 21; Eketahuna County, 14; Mauriceville Borough, 4; Wellington, 6; Napier, 3; Featherston County, 3; Castle Point County, 2; Featherston, 2; Martinborough, 2; Greytown, 1; Dannevirke, 1; New Plymouth, 1; Raurimu, 1; Wanganui, 1; Invercargill, 1; Christchurch, 1; unknown, 7.

Visited on the 8th March, 1912.

There were only 17 patients in hospital, 2 of whom had been in the institution for over two years. As soon as the Buchanan Home for Incurables is ready these patients will be sent there.

The wards were in excellent order. An X-ray room is shortly to be added to the north of the main corridor.

At the time of my visit the Matron, Miss Hayward, was ill in bed.

The Wairarapa Board has adopted the suggestions of the Department with regard to the staffing of the outlying institutions at Greytown and Pahiatua.

It has been found necessary to increase the accommodation for nurses, and extensions to the present Nurses' Home or a separate building for their accommodation will shortly be put in hand.

Pahiatua Hospital.

Chairman of Hospital Committee: J. D. Wilson.

Usual date of meeting of Hospital Committee : Second Thursday in each month. Medical staff, honorary : P. H. Mules, M.B., F.R.C.S. (Edin.) ; J. P. S. Jamieson, M.B., Ch.B. ; W. A. Dunn, M.R.C.S., L.R.C.P.

Medical staff, stipendiary : H. T. Dawson, M.B., M.S. (Aberd.) (non-resident). Matron : E. M. Davis.

Localities, broadly, from which patients came : Eketahuna, 15; Mangatainoka, 6; Pahiatua, 39; Woodville, 11; Ballance, 3; Kaitawa, 13; Pongaroa, 7; Makuri, 8; Konini, &c., 6; Dannevirke, 4; Hukanui, 8; Marima, 4; Coonor, 1; Martinborough, 1; Nikau, 1; Palmerston North, 1; Mako-mako, 2; Mangahao, 2; Kumeroa, 2.

In company with the Matron of the Masterton Hospital, I visited Pahiatua on the 8th December, 1911, to meet the local Committee and the doctor, and explain more fully the proposed plan of staffing the Wairarapa institutions.

This Committee appeared to be more aware of the advantages of the scheme to their hospital than the Greytown one, and were quite willing to accept more central control. They passed a resolution to recommend the adoption of the scheme as outlined to the main Board.

There were only 4 patients in the hospital-3 male and 1 female. One man, who had been in for many months with a serious accident to the spine, is a case requiring a great deal of nursing. He has to be fed and attended to in every way, and occupies a great many hours of the nurses' time; otherwise the staff is at present too large. There are, besides the Matron, a sister and two probationers. At times, when there are cases in the fever wards and bad cases in the general wards, this staff needs aid, which could be supplied from Masterton.

The man's time is well occupied in keeping the large grounds in order, milking, &c.

The place is in very good order throughout.

South Wairarapa Hospital, Greytown.

Chairman of Hospital Committee : Hugh Morrison.
Usual date of meeting of Hospital Committee : Second Wednesday in each month.
Medical staff, honorary : Archer Hosking, M.B., M.S.; D. G. Johnston, M.B., M.S.; A. Gunn
M.D.; H. Webb, M.B., M.S.; A. E. A. Palmer, M.B., M.S.
Medical staff, stipendiary : William Bey, M.B., M.S. (non-resident).

Matron: Mary Baglev.

Localities, broadly, from which patients came: Carterton, 17; Greytown, 18; Featherston, 15; Martinborough, 23; Gladstone, 3; Morrison's Bush, 4; Tarata, 1; Tenui, 1; Cross Creek, 1; Palmerston, 1; Wellington, 1.

Visited on the 8th March, 1912.

There were 6 patients in hospital-all males.

The wards were in excellent order.

Miss Bagley has just succeeded Miss Derry as Matron, Miss Derry, after years of good service, having had to retire on account of ill health.

The Buchanan wards for incurable cases are nearly completed. So far as could be seen, the work has been well carried out. These wards should be sufficient for the needs of the Wairarapa for some time to come.

Renall-Solway Home.

Chairman of Institutional Committee : J. B. Keith.

Usual date of meeting: Third Tuesday in month.

Matron: Annie Johns.

Localities from which inmates came: Masterton Borough, 4; Masterton County, 3; Wairarapa South County, 5; Eketahuna County, 2; Westport, 1; Featherston, 1.

Visited in July, 1911.

There were 8 inmates and another expected.

This little Home is very comfortable, and the old men well looked after by the Matron.

PICTON HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Wednesday in every month.

Chairman : Seymour Fell.

Secretary : J. Blizzard.

Public Health Inspector: James Johnson.

District Nurse : Mary Natalie Drysdale.

Institution under the Board's control: Picton Hospital.

Picton Hospital.

Chairman of Hospital Committee: Seymour Fell.

Usual date of meeting of Hospital Committee : First Wednesday in every month. Medical staff, stipendiary : William Edward Redman, M.R.C.S. (Eng.); Ada Paterson, M.B., Ch.B., (non-residents).

Matron : Hilda Burton.

Localities, broadly, from which patients came : Wellington, 5; Blenheim, 4; D'Urville Island, 4; Temuka, 1; Dunedin, 1; Picton, Pelorus, Queen Charlotte Sound, and districts, 187.

Visited on the 15th December, 1911.

There were only 3 patients in-no women, and no one in the consumptive shelters. An accident case was expected from the Sounds.

Miss Scott had resigned, and Miss Burton was in charge. There is no other registered nurse now on the staff, but one in her third year is coming up for examination in June.

The Hospital was in very good order. The wider verandah space lately added is a great improve-ment. The new fever ward is practically completed, but not yet furnished, and, unfortunately, the cement near the floor has broken away owing to the shrinkage of the flooring-boards, and will need to be done again.

WAIRAU HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Thursday in each month.

Chairman : J. J. Corry. Secretary : A. J. Maclaine (part time).

Inspector of Infectious Diseases : James Johnston.

District Nurse at Seddon : E. Craig.

Institutions under the Board's control: Wairau Hospital; Havelock Cottage Hospital.

125

Wairau Hospital, Blenheim.

Chairman of Hospital Committee: J. J. Corry.

Usual date of meeting of Hospital Committee : Second Tuesday in each month. Medical staff, stipendiary : James Freeborn Bennett, M.B., Ch.B.; David Mathewson Nairn, L.R.C.P. (non-residents).

Matron: W. S. Fulton.

Localities, broadly, from which patients came: Wellington, 2; Christchurch, 2; Auckland, 1; Masterton, 1; Picton, 22; Wairau Hospital District, 218. Visited, 2nd April, 1912.

There were 15 patients in hospital-9 men and 6 women.

The wards, considering their nature, were in good order, but the sanitary annexes were in the usual insanitary condition

In the isolation ward the plaster needs repairing, especially in the smaller rooms. The whole annexe needs renovation.

A new bath is needed in the Nurses' Home.

I commented last year on the need for a drying-room, but one has not yet been provided.

In last year's report I stated that it was highly desirable that careful notes should be taken of patients' condition, &c., from the time of their admission to their discharge, and I was surprised to find that the hint had not been taken. It is true that the Matron keeps notes of a description, but not sufficient as records of disease and treatment, which, apart from their own professional interest, would be most useful in case of complaints by patients as to their treatment, dietary, &c.

The operation-book and other records had not been filled in to date.

Havelock Hospital.

Chairman of Hospital Committee: Rev. E. H. Pain.

Usual date of meeting of Hospital Committee : First Friday in each month.

Medical staff, stipendiary: R. B. Williams, L.R.C.P. (Lon.) (non-resident).

Matron : Olive Peake.

Localities, broadly, from which patients came: Sounds County, 10; Peloner Road District, 14; Havelock, 7; Wellington, 1.

NELSON HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Wednesday in each month.

Chairman : Henry Baigent.

Secretary: S. Blomfield.

Relieving Officer: W. L. Heyward. Institutions under the Board's control: Nelson Hospital, Alexandra Home (for destitute old people).

Nelson Hospital.

Chairman of Hospital Committee : Henry Baigent.

Usual date of meeting of Hospital Committee : First Wednesday in each month.

Medical staff, stipendiary : H. E. A. Washbourn, M.D. (resident).

Matron : E. L. Gosling.

Localities, broadly, from which patients came: Waimea, 128; Nelson, 212; Richmond, 6; Takaka, 10; Collingwood, 20; Motueka, 12; Murchison, 15; outside districts, 40. Visited, 1st and 2nd August, 1911.

There were 50 patients in the Hospital.

Since my last visit the male ward has been provided with a new sanitary block, but the old closets and bathrooms had not been removed, nor had a new sanitary block been provided for the female ward, which is very badly needed, and which has been recommended in previous reports.

The Hospital did not strike me as looking so tidy as on my previous visits.

I met the Board and represented the above matters to them, and also suggested that, as the Hospital buildings were old and not worth spending much on in renovation, it would be as well to approach a firm of architects experienced in hospital architecture, who might prepare plans of a new hospital, which could be gradually erected as the Board's finances would allow.

Alexandra Home, Nelson.

Chairman of Institutional Committee : Henry Baigent.

Usual date of meeting: First Wednesday in each month.

Master: Frank Liley.

Matron: Mrs. Frank Liley.

Localities from which inmates came : Nelson Provincial District, 44; Invercargill, 1. Visited, 2nd August.

There were 30 inmates.

The place was in good order.

BULLER HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Second Monday in every alternate month.

Chairman : James H. Greenwood.

Secretary: Robert F. Mullan (part time).

Institutions under the Board's control: Old People's Home, Westport; Buller Hospital, Westport.

Buller Hospital, Westport.

Chairman of Hospital Committee: James H. Greenwood.

Usual date of meeting of Hospital Committee : Second Tuesday in every alternate month. Medical staff, honorary : E. D. Dunn, L.R.C.P., L.F.P. & S., L.S.A.

Medical staff, stipendiary : Guy Hallwright, M.R.C.S., L.R.C.P. (non-resident).

Matron : E. Dunsford.

Localities, broadly, from which patients came: Westport Borough, 137; Buller County, 113.

Visited, 7th August.

There were 22 patients—17 males and 5 females. Though the buildings are comparatively new, the plaster in the wards is much cracked, and the wards and corridors badly need repainting.

The Board has very properly decided to erect a Nurses' Home, the quarters for the staff being much overcrowded, and plans have been approved by the Department. The erection of a new ward is also contemplated.

With the above exception, the hospital was in good order.

D. Hallwright gives a great deal of time to this institution. I had an opportunity of meeting the Buller Board and discussing various matters with regard to the working of the Hospitals Act.

Old People's Home, Westport.

Chairman of Institutional Committee: J. H. Greenwood.

Usual date of meeting: Second Tuesday in every alternate month. Medical staff, stipendiary: Guy Hallwright, M.R.C.S., M.R.C.P. (non-resident), part time.

Master : John Stewart.

Matron : Mrs. J. Stewart.

Localities from which inmates came : Westport, Buller County.

Denniston Hospital.

Chairman of Hospital Committee : James Fisher.

Usual date of meeting of Hospital Committee : First Monday in the month.

Medical staff, stipendiary : Thomas Gordon Short, M.B., Ch.B. (non-resident).

Matron : Mrs. L. E. Smith. Localities, broadly, from which patients came : Denniston and district.

Visited, 7th August.

There were 5 patients-one a female recovering from puerperal sepsis.

This little institution is fulfilling a useful purpose, the acute cases or those requiring major surgical operations being sent to the Westport Hospital.

The Hospital was in good order, but the woodwork is very bad, the timber having shrunk very much

Thirty-eight patients had been admitted since the opening of the institution in November.

I met the Chairman of the Hospital Committee, Mr. Fisher, and explained to him that it would be a great advantage to the Denniston people if a maternity ward were erected in connection with the Hospital, there being no qualified midwife on the hill.

INANGAHUA HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Fourth Thursday in each month.

Chairman : Edward John Scantlebury.

Secretary : Charles Nevin (part time).

Institutions under the Board's control: Reefton Hospital.

Reefton Hospital.

Chairman of Hospital Committee: Edward J. Scantlebury.

Usual date of meeting of Hospital Committee : Fourth Thursday in each month. Medical staff, stipendiary : W. A. Conlon, M.A., Ch.B., B.M. (non-resident).

Matron : J. Barry.

Localities, broadly, from which patients came : Inangahua, 147; Grey, 3.

Visited, 8th August, 1911.

There were 22 patients, 5 being women.

With the exception of a male patient with a sinus, who had been in the Hospital five months, there were no true hospital cases in the building, the other 21 patients being aged persons.

Apparently the great falling-off in proper hospital patients is due to the fact that a large private hospital has been opened in Reefton.

The new buildings-kitchen, surgery, and Nurses' Home-were in good order, and the other buildings in as good order as might be expected.

I represented to Dr. Conlon that the practice of making some of the patients admitted to this Hospital pay additional fees for surgical assistance was a most reprehensible one, and one that would not be tolerated by the Department. He gave me his assurance that he would discontinue this practice, and I communicated this assurance to the Board.

GREY HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Wednesday in month.

Chairman : Michael Hannan. Secretary : Michael Phillips (part time). Public Health Inspector : Joseph Fletcher.

Institution under the Board's control : Grey River Hospital.

Grey River Hospital, Greymouth.

Chairman of Hospital and Charitable Aid Board : Michael Hannan. Usual date of meeting of Hospital and Charitable Aid Board : Second Wednesday in month. Medical staff, honorary : James W. McBrearty, F.R.C.S., L.R.C.S. (Edin.) ; James McBrearty, L.F.P. & S., L.M. ; William McKay, M.D., F.R.C.S. (Eng.). Medical staff, stipendiary : Charles G. Morice, M.D., F.R.C.S. (Eng.) (non-resident).

Matron: Susan Kitto.

Localities, broadly, from which patients came: Grey County, 225; Greymouth, 140; Brunner Borough, 21; other districts and shipping, 19. Visited, 9th August, 1911.

There were 33 patients in the Hospital, and 36 in that part of this institution devoted to the accommodation of the aged.

The wards were in good order, and everything seemed to be working well under Dr. Morice and Miss Kitto, the newly appointed Matron.

I attended a meeting of the Grey Hospital Board.

WESTLAND HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Second Wednesday in each month. Chairman: Thomas J. McGuigon.

Secretary : John Peake.

Institutions under the Board's control: Westland Hospital, Kumara Hospital, Totara Hospital, Otira Cottage Hospital.

Westland Hospital, Hokitika.

Chairman of Hospital Committee : Thomas J. McGingon.

Usual date of meeting of Hospital Committee : Second Wednesday in month.

Medical staff, stipendiary : Ebenezer Teichelmann, F.R.C.S. (Eng.) (non-resident.) Matron : M. R. Little.

Localities, broadly, from which patients came : Westland County, 118; Hokitika Borough, 48; Kumara Borough, 4; Ross Borough, 1.

Visited, 10th August, 1911.

There were 20 hospital patients proper-13 men and 7 women.

The male ward was closed for repairs.

Here, as in other West Coast hospitals, there was ample evidence of bad workmanship. The walls of the ward, though barely three years old, were discoloured, and the woodwork flimsy.

The new operating-theatre-the need for which was made such a point of by the old trusteesthough available for use for the past six months, has not yet been used. The workmanship here was again bad and the plumbing primitive, though supposed to have been supervised by the Public Works Department.

There were 16 males and 1 female in the Old People's Home.

The cost of supplies to the institution are low as compared to other institutions in the Dominion.

Kumara Hospital.

Chairman of the Hospital Committee : John Palmer.

Usual date of meeting of Hospital Committee : Last Friday in month.

Medical staff, stipendiary : George Phillips, M.R.C.S. (Eng.), L.R.C.P. (Lon.) (non-resident).

Matron : Ida Kilgour.

Localities, broadly, from which patients came : Westland County, 58; Kumara Borough, 57; Hokitika Borough, 4; Ross Borough, 1.

Visited, 10th August, 1911.

There were 22 inmates in this institution, 6 being hospital patients proper-4 men and 2 women. The new female ward recently erected has been very badly finished, the plaster being cracked in all directions.

The lower part of the institution, devoted to the accommodation of the old people, is in a dilapidated condition. The floors in one of the male wards and in the kitchen have very considerably sunk.

I recommended to the members of the Board who accompanied me on my visit that the three West Coast Boards should combine in the erection of an Old People's Home. I hope some good may result from this oft-repeated recommendation.

I attended a hastily convened meeting of the Westland Board, and discussed various matters relative to the administration of hospitals under its control.

Totara Hospital, Ross.

Chairman of Hospital Committee: Thomas Wanless Bruce.

Usual date of meeting of Hospital Committee : Last Thursday in month. Medical staff, stipendiary : T. W. J. Johnson, M.B., Ch.B. (resident).

Matron : Ada C. Phillips.

Localities, broadly, from which patients came: Ross Borough, 12; Westland County, 17. The new ward for male patients was completed during the year.

Otira Cottage Hospital.

Chairman of Hospital Committee : T. Greatbach. Usual date of meeting of Hospital Committee : Second Wednesday in month.

Medical staff, stipendiary : W. Cairns, M.S. (non-resident).

Matron : Louise Ziegler. Locality, broadly, from which patients came : Westland County, 30.

Visited, 11th August, 1911.

Had 2 male patients in

The Hospital was in good order, and has proved useful for cases of accidents from the Otira Tunnel.

NORTH CANTERBURY HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Fourth Wednesday in each month. Chairman: Frederick Horrell.

Secretary : Thomas C. Norris, and four assistants.

Public Health Inspectors: A. W. Nicol, George Baker, J. Menzies. Charitable Aid Inspector: William S. Goring.

Institutions under the Board's control: Christchurch Hospital; Consumptive Sanatorium, for the treatment of curable cases of consumption; Akaroa Cottage Hospital; Infectious diseases Hospital, Bottle Lake, principally for scarlet-fever cases; Lyttelton casualty ward, for the treatment of cases of accident and requiring attention before being transferred to Christchurch Hospital; Taurangi Old Men's Home, Ashburton, for destitute old men or chronic invalids; Female Refuge, Linwood, for single women who are pregnant (first cases) ; Queen's Jubilee Memorial Home, Woolston, for destitute aged or invalid women; Orphanage, Waltham, for destitute children who are orphaned; Armagh Street Depot, a casual shelter for homeless men; Samaritan Home, Addington, a temporary home for vagrant women.

Christchurch Hospital.

Chairman of Hospital Committee: W. W. Tanner.

Chairman of Hospital Committee: W. W. Tanner.
Usual date of meeting of Hospital Board : Fortnightly, Thursday.
Medical staff, honorary : H. T. D. Acland, F.R.C.S. (Eng.), L.R.C.P. (Lon.); J. A. T. Bell, M.D.
(Edin.); J. F. Duncan, M.B., Ch.B.; H. McL. Inglis, M.B., Ch.M.; M. Louisson, M.B.; G. Russell,
M.B.; J. Stevenson, M.B.; A. G. Talbot, M.B., Ch.M.; F. G. Westenra, M.B., C.M.
Medical staff, stipendiary : Thomas T. Thompson, M.B., Ch.B. (N.Z.); W. S. Robertson, M.B.,
Ch.B. (N.Z.), (residents); F. L. Scott, M.D., Ch.B., L.R.C.P. & S. (Eng.) (non-resident).

Matron: Mabel Thurston.

Localities, broadly, from which patients came : Akaroa County, 7; Akaroa Borough, 1; Amuri County, 13; Ashley Road, 9; Kowai Road Board, 14; Cust, 7; Eyreton, 6; Oxford, 9; Rangiora, 10; Amberley Town Board, 3; West Eyreton Road Board, 4; Cheviot County, 26; Ellesmere, 37; Halswell, 18; Heathcote, 50; Kaikoura, 11; Malvern, 55; Mount Herbert, 5; Paparua, 39; Selwyn, 21; Springs, 20; Tawera, 13; Waimairi, 194; Waipara, 15; Wairewa, 21; Christchurch City, 1,193; Kaiapoi Borough, 19; Lyttelton, 90; New Brighton, 32; Rangiora, 29; Spreydon, 50; Sumner, 9; Woolston, 61; other districts, 69; shipping, 7; no address, 12.

Visited on many occasions during the year.

The accommodation, especially for male patients, has been severely taxed, and it will be necessary to proceed with the proposed additions and alterations in the near future. A great deal has been done by the Board recently in the erection and opening of the children's ward and ward for gynæcological patients.

The Nurses' Home is now completed, and will give sufficient accommodation for the anticipated nursing requirements of the hospital for years to come. The building of the administration block is now under consideration, and various plans have been

proposed.

The necessity of an infectious-diseases hospital for Christchurch in a more accessible place than at Bottle Lake must also be considered.

North Canterbury Sanatorium.

Chairman of Hospital Committee : W. W. Tanner. Usual date of meeting of Hospital Committee : Fortnightly, Thursday.

Medical staff, stipendiary : G. J. Blackmore, M.D., C.M., D.P.H. (resident).

Matron: Kate Benjamin.

Localities, broadly, from which patients came: Akaroa County, 1; Amuri County, 1; Christchurch City, 44; Ellesmere County, 1; Eyreton Road District, 1; Halswell County, 2; Heath-cote County, 2; Kaiapoi Borough, 2; Lyttelton Borough, 5; New Brighton Borough, 5; Rangiora Borough, 1; Rangiora Road District, 3; Wairewa County, 1; Woolston Borough, 1; Spreydon Borough, 3; Waimairi County, 4; unknown, 2.

17—H. 31.

Visited on the 16th March, 1912.

There were 23 men and 11 women in. 2 women were in bed, and 1 man; but the majority of the male patients were out for their morning exercise.

The women were preparing the vegetables for dinner. The shelters were all beautifully clean. The patients do all the work of keeping them in order, and do not find it too much even to scrub the floors.

The dining-hall of this institution is a model one. The front and sides almost entirely open, and seldom, except in extremely bad weather, require to be partly closed. The Board has in contemplation the erection of a ward for chronic and incurable cases of

consumption. Such a ward is badly needed, and I hope that it will be placed sufficiently near to the present sanatorium to allow both institutions to be under one administration.

Akaroa Hospital.

Chairman of Hospital Committee: W. W. Tanner.

Usual date of meeting of Hospital Committee : Fortnightly (Thursday). Medical staff, stipendiary : P. G. McReddie, M.B., M.S. (non-resident).

Matron: I. Ivey.

Localities, broadly, from which patients came: Akaroa County, 21; Christchurch City, 2; Akaroa Borough, 3; Ellesmere County, 1; other Hospital and Charitable Aid Districts, 2.

Visited on the 8th October, 1911.

Five patients in, one a case of severe coach accident, a special nurse from Christchurch Hospital nursing her.

Mrs. Penrose was away on leave ; Miss Ivey was in charge. Mrs. Penrose has since resigned after many years of service. Miss Davies, Matron of Otira Cottage Hospital, has been appointed Matron.

Kaikoura Hospital.

This Hospital has been built during the year, and will shortly be opened. It should be of great value to the residents of this part of the North Canterbury District.

Maternity work may well be undertaken in addition to the ordinary cases. Sister Ivey has been appointed Matron.

Christchurch Infectious-diseases Hospital, Bottle Lake.

Chairman of Hospital Committee: T. D. Boag. Usual date of meeting of Hospital Committee: Second Tuesday in each month.

Medical staff, stipendiary : J. F. Duncan, M.B., Ch.B. (non-resident).

Matron : K. Bowie.

Localities, broadly, from which patients came: Christchurch City, 136; Eyreton Road District, 1; Halswell County, 6; Heathcote County, 8; Kaiapoi Borough, 1; Lyttelton Borough, 6; Malvern County, 2; New Brighton Borough, 2; Paparua County, 3; Rangiora Borough, 1; Rangiora Road District, 1; Spreydon Borough, 8; Springs County, 1; Sumner Borough, 13; Selwyn County, 2; Waimairi County, 47; Woolston Borough, 31.

Visited on several occasions.

Accommodation here was heavily taxed from May to December. A small building which had been erected for possible cases of dangerous infectious diseases was moved to a site nearer to the main building and added to, so as to provide better accommodation for the nurses and patients. This was made use of for scarlet-fever cases.

The building erected for a doctor's house was also moved nearer the main building, for accommodation of nurses. A new building was erected for a play-room for children in bad weather. This Hospital is now staffed from the Christchurch Hospital, the late Matron, Mrs. Seymour,

having resigned, after several years of excellent work, which at times was very arduous. This Hospital is difficult of access, and, although it is quite suitable for the treatment of the ordinary mild case, the accommodation is not suitable for the treatment of many severe and actue

cases

The matter of providing a suitable fever hospital is being considered by the Board, but it seems inadvisable to incur much expenditure on the erection of buildings on this site if a more suitable site can be obtained.

Lyttelton Casualty Ward.

Chairman of Hospital Committee: W. W. Tanner.

Usual date of meeting of Hospital Committee : Fortnightly, Thursday. Medical staff, stipendiary : J. A. Newell, M.B., Ch.B. (non-resident).

Matron: Mrs. D. Johnston.

Localities, broadly, from which patients came: Akaroa County, 1; Christchurch City, 3; Heathcote County, 2; Lyttelton Borough, 5; Paparua County, 1; Wellington, 1; shipping, 7.

Samaritan Home, Christchurch.

Chairman of Institutional Committee : F. Horrell.

Usual date of meeting : Fortnightly.

Medical staff, stipendiary : J. F. Duncan, M.B., Ch.B. (non-resident), part time.

Master : Maurice Roche. Matron : Minnie Roche.

Localities from which inmates came: Amuri County, 1; Christchurch City, 1; Ellesmere County, 1; Kaiapoi Borough, 1; Lyttelton Borough, 1; Oxford Road District, 1; Springs County, 2; Waimairi County, 2; Waipara County, 2; Woolston Borough, 2; other Hospital and Charitable Aid Districts, 4.

Armagh Street Depot, Christchurch.

Chairman of Institutional Committee: F. Horrell.

Usual date of meeting : Fortnightly.

Medical staff, stipendiary : J. F. Duncan, M.B., Ch.B. (non-resident), part time.

Caretaker: W. Reeves.

Matron : M. Reeves.

Localities from which inmates came: Christchurch City, 16; Ellesmere County, 1; Halswell County, 1; Kaikoura County, 2; Lyttelton Borough, 6; Eyreton Road Board, 1; Oxford Road Board, 1; Ashburton, 6; South Canterbury, 1; casuals (undecided), 6.

Waltham Orphanage.

Chairman of Institutional Committee : H. B. Sorensen.

Usual date of meeting : Second Tuesday in each month.

Medical staff, stipendiary: J. F. Duncan, M.B., Ch.B., F.R.C.S. (Edin.) (non-resident), part time. Matron: Miss Jean Donaldson.

Localities from which inmates came : North Canterbury Hospital District.

Visited on the 18th March, 1912.

The Matron (Miss Donaldson) was away on leave.

There were 16 children in-one an infant of eighteen months. There were 9 boys.

Some additions have been made-the dining-room enlarged, and additional dormitory and staff accommodation to admit of taking 22 children.

All the children with the exception of one little girl were away at school.

Tuarangi Home, Ashburton.

Chairman of Institutional Committee: H. B. Sorensen.

Usual date of meeting : Second Tuesday in each month. Medical staff, honorary : G. Lyon, M.B., M.S. (Aberd.) (non-resident), part time.

Master: F. H. Knight.

Matron : E. Knight.

Localities from which inmates came: Christchurch, 72; Akaroa, 1; Amberley, 1; Amuri, 1 Ellesmere, 2; Eyreton, 1; Cheviot, 1; Kaiapoi, 1; Lyttelton, 7; Malvern, 1; New Brighton, 1; Rangiora, 3; Sumner, 1; Woolston, 2; Waimairi, 3; Halswell, 1; Kaikoura, 3; Ashburton, 16.

This institution has improved under the direct supervision of the Board and the Matron of the Christchurch Hospital.

The chronic patients are well cared for by the nursing staff.

Memorial Home, Woolston.

Chairman of Institutional Committee: H. B. Sorensen.

Usual date of meeting : Second Tuesday in each month. Medical staff, stipendiary : J. F. Duncan, M.B., Ch.B., F.R.C.S. (Edin.) (non-resident), part time. Matron: Margaret Higgins.

Localities from which inmates came: Akaroa, 1; Ashburton, 1; Cheviot, 1; Christchurch, 68; Kaikoura, 1; Kaiapoi, 1; Lyttelton, 2; New Brighton, 1; Malvern, 1; Kowai, 1; Rangiora, 2; Spreydon, 1; Waimairi, 1; Waipara, 1.

Visited in July, 1912.

There were 61 inmates.

In the chronic wards there were 18 patients.

Miss Higgins is still doing excellent work in charge of this institution.

Female Refuge, Linwood.

Chairman of the Institutional Committee: H. B. Sorensen.

Usual date of meeting: Second Tuesday in each month. Medical staff, stipendiary: J. F. Duncan, M.B., Ch.B., F.R.C.S. (Edin.) (non-resident), part time. Matron: Miss A. M. Chapman.

Localities from which inmates came : Christchurch City, 28; Ellesmere County, 2; Mount Herbert County, 1; New Brighton Borough, 1; Rangiora Borough, 1; Summer Borough, 1; Springs County, 1; Waimairi County, 2.

Vide report under "Maternity Homes," page 26.

ASHBURTON HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Monday in each month.

Chairman : Henry Davis.

Secretary: Arthur Clarke.

Public Health Inspector : M. Kershaw.

Institution under the Board's control: Ashburton Hospital.

Ashburton Hospital.

Chairman of Hospital Board : Henry Davis.

Usual date of meeting of Hospital Board : First Monday in each month.

Medical staff, stipendiary : Hugh Hunter, M.B., B.Ch., Surgeon Superintendent ; George Lyon, M.B., C.M. (Aberd.), Assistant Surgeon, (non-residents).

Matron: S. E. Morley.

Localities, broadly, from which patients came: Ashburton, 86; Hampstead, 9; Allenton, 4; Tinwald, 13; Wakanui, 5; Winston, 8; Hinds, 9; Methven, 21; North Canterbury, 4; Wanganui, 1;

Mount Somers, 10; Mayfield, 17; Rakaia, 6; Longbeach, 8; Elgin, 2; Dromore, 14; Invercargill, 1; Rangiora, 1; Chertsey, 3; Timaru, 1; swaggers, 3.

Visited, February. There were 14 patients in hospital.

The Board has recently accepted a tender of £5,012 for renovation of the existing wards and extension of the Hospital.

The Ashburton Hospital furnishes one of those instances of institutions erected without thought for the future, and it was extremely difficult to arrive at a satisfactory scheme of extension. However, I think that the erection of the new buildings on the lines of the plans of the Board's architects (Messrs. Collins and Harman) will to a great extent remove some of the objectionable features of the old hospital.

SOUTH CANTERBURY HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: Third Tuesday in the month.

Chairman : F. R. Gillingham.

Secretary: H. S. Russell, and one assistant.

Public Health Inspector: H. Paul.

Institutions under the Board's control: Timaru Hospital, Talbot Infectious-diseases Hospital, Waimate, Hospital, Old Men's Home, Timaru.

Timaru Hospital.

Chairman of Board : F. R. Gillingham.

Usual date of meeting of Board : Third Tuesday. Medical staff, honorary : W. C. Burns, M.D., B.S. (Glasg.); W. H. Unwin, M.D., F.R.C.S. (Eng.);

J. R. Loughnan, M.B., Ch.B. (Melb.); W. E. Gibson, M.B., Ch.B. Medical staff, stipendiary: George H. Ussher, M.D., F.R.C.S. (Eng.) (resident at Hospital). Matron: Miss Jean Todd.

Localities, broadly, from which patients came : Geraldine Borough, 17; Geraldine County, 25; Waimate Borough, 8; Waimate County, 43; Timaru Borough, 319; Temuka Borough, 37; Levels County, 115; Mackenzie County, 33; casuals, 21.

Visited on the 16th September, 1911.

There were 27 patients in, 13 being women. As there were only 2 children, and the staff was rather short-handed, the children's ward was closed.

There were 4 women and 2 men with tubercular disease. There was also 1 case of measles, which was being nursed in a side ward by the nurses in the ward.

The Hospital was in good order. A new sterilizer had been provided for the theatre and a boiler for sterilizing water.

Maternity cases are now being taken in a side ward. One had recently been in. The Hospital requires painting inside and out.

Timaru Old People's Home.

Chairman of Board : F. R. Gillingham.

Usual date of meeting : Third Tuesday.

Medical staff, stipendiary : George H. Ussher, M.D., F.R.C.S. (Eng.) (non-resident), part time. Master : James Young.

Matron : Grace Young.

Visited, 9th February, 1912.

Accommodation, about 60 beds-33 males and 2 females in.

Place as clean as can be expected considering the state of the buildings. Garden in very good order.

Construction of new Home is being delayed through lack of bricks.

Talbot Infectious-diseases Hospital.

Chairman of Institutional Committee: F. R. Gillingham.

Usual date of meeting of Hospital Board : Third Tuesday

Medical staff, stipendiary : George H. Ussher, M.D., F.R.C.S. (Eng.) (non-resident). Localities, broadly, from which patients came : Timaru Borough, 30; Waimate County, 1; Levels County, 11; Pleasant Point (Tawa district), 5; Geraldine County, 2; Geraldine Borough, 1; Mackenzie County, 1.

I visited the Fever Hospital on the 6th September, 1911, with Dr. Ussher.

There were 10 patients in-one a nurse.

There were 2 nurses in charge from the Hospital.

Some improvement had been made in the accommodation for nurses, a bathroom and lavatory having been added for their use. A small pantry is also to be fixed up. It is difficult to work this place from the main hospital, as it is so far away.

When the Old People's Home is erected, the foundations of which are laid in close proximity, it would be an excellent plan to put a trained nurse in charge of the two, with a man to act as wardsman and gardener, and such other staff as necessary. She could then take charge of the Fever Hospital when empty, and supervise the work of the nurses from the Hospital when there are patients in.

Waimate Hospital.

Chairman of Hospital Committee: Alfred Garland. Usual date of meeting of Hospital Committee : Last Wednesday, monthly. Medical staff, stipendiary : H. C. Barclay, M.D., F.R.C.S. (non-resident). Matron : M. Mander.

Localities, broadly, from which patients came : Waimate County, 107; Waimate Borough, 57. Visited, 5th February, 1912.

Nine patients.

A new lavatory, which is much needed, is being built for the men's ward.

In the operating-theatre a gas radiator has been installed for heating, and there is provision outside for sterilizing water, which is laid on to the theatre.

Good use is made of the grounds, as vegetables, milk, and butter are all provided on the premises. Hospital in good order.

WAITAKI HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Tuesday in each month.

Chairman : Andrew Fraser.

Secretary : Walter Gibb.

Public Health Inspector: R. J. McKenzie.

Institution under the Board's control: North Otago Benevolent Home.

North Otago Benevolent Institution, Oamaru.

Chairman of Board : Mr. Andrew Fraser.

Usual date of meeting : First Tuesday in each month.

Medical staff, stipendiary : K. McAdam, M.B., C.B. (N.Z.), M.R.C.S. (Lon.) (non-resident), part time

Matron : Margaret Dormer.

Localities from which inmates came: Waitaki County, 43; Oamaru, 13; Hampden, 3; South Canterbury, 3; Otago, 2. Visited, 7th February.

Accommodation for 35 males and 15 females, also for 9 sick males and 9 sick females. Number of inmates, 32-25 males, 7 females, including 1 sick male and 1 sick female.

Everything in excellent order.

A lavatory is to be provided for sick males.

A new morgue has been built.

OTAGO HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Alternate Thursdays, at 8 p.m.

Chairman : James Hamlin Walker.

Secretary : John Jacobs, and five assistants.

Public Health Inspectors : James Craighead and William Armour.

Other Inspectors: M. Fraer, Inspector and Collector; F. Darroch, Inspector.

Institutions under the Board's control: Dunedin Hospital; Otago Benevolent Institution; Maternity Home, Forth Street; Infectious-diseases Hospital; Pleasant Valley Sanatorium, Palmerston South; Tuapeka Hospital, Lawrence; Kaitangata Cottage Hospital; Port Chalmers Cottage Hospital.

Dunedin Hospital.

Chairman of Hospital Committee: J. H. Walker.

Chairman of Hospital Committee: J. H. Walker.
Usual date of meeting of Hospital Committee: Monday evening, alternate.
Medical staff, honorary: D. Colquhoun, M.D., F.R.C.P. (Lon.); M. Macdonald, B.Sc. (N.Z.),
M.B., C.M. (Edin.); F. Fitchett, M.D., M.S. (Edin.); L. E. Barnett, M.B., F.R.C.S. (Eng.); F. S.
Batchelor, F.R.C.S. (Eng.); E. J. O'Neill, M.B. (N.Z.), M.R.C.S. (Eng.), F.R.C.S. (Edin.); H. L.
Ferguson, M.D., F.R.C.S. (I.); F. R. Riley, F.R.C.S. (Eng.); J. O. Closs, M.D., C.M. (Edin.); W. S.
Roberts, M.R.C.S. (Eng.); W. Newlands, M.A., M.B., Ch.B., F.R.C.S. (Edin.); H. P. Pickerill, M.B.,
Ch.B., B.D.S., L.D.S. (Eng.); W. A. Fleming, M.B., C.M. (Edin.); S. C. Allen, M.D. (N.Z.), F.R.C.S.
(Eng.); E. H. Williams, M.B., Ch.B., M.R.C.R.S. (Eng.), D.P.H. (Cantab.); S. A. Moore, M.D., C.M.
(Edin.); William Butement, M.B., M.R.C.S. (Eng.), L.R.C.P. (Lon.); Charles North, M.B., Ch.B.,
M.R.C.S., L.R.C.B.; Winifred I. Bathgate, M.B., Ch.B., B.Sc.; Edwin D. Booth, masseur.
Medical staff, stipendiary: Radiologist, P. C. Cameron, M.D. (Edin.) (non-resident); T. Julian,
M.B., Ch.B.; D. Whyte, M.B., Ch.B.; P. P. J. Stewart, M.B., Ch.B., (residents); A. R. Falconer,
B.A., B.Sc., M.B., Ch.B. (N.Z.), D.P.H. (Lon.) (non-resident).
Matron: K. M. Mackenzie.
Localities, broadly, from which patients came : Dunedin and suburbs, 1,527; Balclutha. 15:

Localities, broadly, from which patients came : Dunedin and suburbs, 1,527; Balclutha, 15; Kaitangata, 36; Lawrence, 26; Palmerston South, 66; Green Island, 36; Milton, 27; Roxburgh, 10; Mosgiel, 72; Port Chalmers, 40; Catlin's, 56; Henley, 20; Middlemarch, 32; Clinton, 10; Seacliff, 11; Tapanui, 2; shipping, 46; Maniototo, 5; Vincent, 22; Waitaki, 19; Southland, 34; South Canterbury, 6; Westland, 1; Buller, 1; Ashburton, 1; North Canterbury, 4; North Island, 5.

Visited on several occasions during the year. On the 11th March, 1912, I went round the wards with the new Lady Superintendent (Miss Mackenzie), who appears to have a good grasp of the various duties she has to undertake, and if strong enough to carry out her ideas should prove a capable Matron.

The temporary accommodation for advanced cases of consumption-which is provided by building the corridor to connect with the proposed ward for women, and adding to it a wide, partially enclosed verandah divided off into wards for male and female patients, and a ward kitchen where all requisites for these patients can be kept apart-is now nearly ready for occupation.

A great improvement to the old wards are the balconies now being erected, where patients can be treated in the open air, and beds wheeled out from the wards. These additions will remedy a great defect in the Dunedin Hospital.

The wards were full but not crowded, and were in very good order.

The domestic arrangements had been reorganized. The main kitchen is managed by a male cook, and the cooking for the nursing staff is now carried on in the home kitchen, and is much more satisfactory.

The common dining-hall for the domestic staff is also now in use, the laboratory having been adapted for the purpose.

The building of the gynæcological ward is to be proceeded with shortly, and it will also be necessary to add to the accommodation for nurses. The ground-space being so limited, it will be difficult to evolve an entirely satisfactory plan for additions to the Home.

Dunedin Medical School.

Chairman of Hospital Committee : J. J. Clark. Usual date of meeting of Hospital Committee : Monday evening (alternate). Medical staff, honorary : F. R. Riley, F.R.C.S. (Eng.).

Medical staff, stipendiary : R. Ritchie, M.B., M.R.C.S. (Eng.) (non-resident).

Matron: Ruth M. Every.

Localities, broadly, from which patients came: Otago, 153; Central Otago, 8; Northern Otago, 3; Southland, 9; Canterbury, 3.

For report, see "Maternity Hospitals," page 26.

Otago Benevolent Institution.

Chairman of Institutional Committee : W. T. Talboys.

Usual date of meeting: Monday evening (alternate). Medical staff, stipendiary: A. R. Falconer, B.A., B.Sc., M.B., Ch.B. (N.Z.), D.P.H. (Lon.), and Dunedin Hospital Staff (non-resident), part time.

Master : George Sinclair.

Matron: Lucy M. Mee.

Localities from which inmates came: Dunedin, 274; Lawrence, 10; Invercargill, 6; Taieri, 4; Otago Central, 6; Brighton, 4; Milton, 4; Ophir, 1; Clyde, 4; Naseby, 3; Cromwell, 4; Roxburgh, 3; Port Chalmers, 3; Clinton, 2; Waitahuna, 1; Balclutha, 1.

Visited on the 13th March, 1912.

There were 113 male and 60 female inmates.

The Home is now under the charge of Mr. Sinclair, Mr. Mee, after twenty-six years of service, being incapacitated. Mrs. Mee acts as Matron and housekeeper, and keeps the books.

The women's portion of the institution was in excellent order, but not so the men's. The Board will no doubt act on some recommendations sent after inspection, and remedy this state. [These have since been acted upon.]

The chronic wards, under a nurse from Dunedin Hospital and six probationers, are well kept, and the old people well looked after.

Port Chalmers Cottage Hospital.

Chairman of Hospital Committee: J. H. Walker.

Usual date of meeting of Hospital Committee : Once a fortnight.

W. H. Borrie, M.B., M.S.; Hodges, M.B., M.S. Medical staff, honorary :

Matron : Amelia Veitch.

Localities, broadly, from which patients came : England, 3; Italy, 1; Port Chalmers, 7. Visited, 29th February, 1912.

No inmates.

There has been no case in this Hospital for two months.

The Hospital is well and cleanly kept. It is seldom that this Hospital is made use of, as on one occasion it was found advisable to send a bad accident-a case in which both legs were crushedto Dunedin for operation.

Kaitangata Hospital.

Chairman of Hospital Committee : Robert Hitchison.

Usual date of meeting of Hospital Committee : Pro re nata.

Medical staff, honorary: James Fitzgerald, B.A., M.B., M.S., F.R.C.S. (Eng.).

Matron: Fanny Mary Clements.

Localities, broadly, from which patients came : Kaitangata, Inch-Clutha, Stirling, Owaka, Wangaloa.

Visited, 5th March, 1912.

The only inmate was a boy who was suffering from diphtheria, who was in the isolation block. A nurse from Dunedin Hospital had been sent to look after him.

This Hospital has proved useful for cases of accident from the Kaitangata Coal-mine.

The Matron is also usefully employed in carrying on district nursing under Dr. Fitzgerald's direction, when required.

The Hospital was in excellent order.

Tuapeka Hospital, Lawrence.

Chairman of Hospital Committee: W. E. S. Knight. Usual date of meeting of Hospital Committee : Second Friday, alternate month.

Medical staff, stipendiary : William Sutherland, M.R.C.S., L.R.C.P., M.B., B.S. (resident).

Matron : Johanna Drew. Locality, broadly, from which patients came : Tuapeka County.

Visited, 6th March, 1912.

Staff: Matron, wardsman, and cook; the Matron having charge of the female patients, and the wardsman of the male.

There were 2 inmates-1 male who stated he was suffering from indigestion and complications, and 1 female who was in six weeks suffering from abscess.

Although the fees are 5s. per day, the highest fee collected was 3s. per day. Presumably some of the patients could have paid the full fee.

135

The only windows that open in the female ward are two small ones at one end, and these only open at the bottom. There is a general untidiness inside and out. The sanitary arrangements and fittings require bringing up to date.

If this Hospital is to be continued to be used for hospital patients, the Board should take into consideration the matter of effecting radical improvements in the building, drainage, and the nursing administration.

Palmerston South Sanatorium.

Chairman of Hospital Committee: S. S. Myers.

Usual date of meeting of Hospital Committee : Monday evening, alternate.
 Medical staff, honorary : D. Colquhoun, M.D., F.R.C.P., Hon. Physician ; S. T. Champtaloup,
 M.B., Ch.B., B.Sc., Hon. Bacteriologist ; H. P. Pickerill, M.B., Ch.B., M.D.S. (Birm.), L.D.S. (Eng.),

Hon. Stomatologist.

Medical staff, stipendiary : C. L. Will, M.B., Ch.B. (resident) ; A. R. Falconer, M.B., Ch.B., D.P.H., B.Sc., visiting Medical Superintendent. Sister in charge : H. B. Brown.

Localities, broadly, from which patients came: Dunedin and suburbs, 38; Mosgiel, 10; Green Island, 1; Port Chalmers, 4; Catlins, 1; Milton, 2; Palmerston South, 1; Waikouaiti, 2; Kaita-ngata, 3; Waipori, 1; Roxburgh, 1; Vincent, 1; South Canterbury, 5; Waitaki, 3; Southland, 6; Ashburton, 2.

Visited, 17th June, 1911; also 10th March, 1912.

Dr. Falconer in charge for week-end ; Dr. Will away.

Inmates: 18 males, 16 females.

New shelters for females nearly complete. There will then be 24 beds for females and 2 single shelters at present used for nurses, and $\bar{20}$ beds for males.

Miss Girdler has left, and Sister Brown is in charge. There are also 1 certificated nurse and 4 probationers from the Dunedin Hospital, who stop about three months.

Domestic staff : Two maids at £1 per week ; caretaker and cook (married couple), £100 per annum and found ; laundress and porter.

A ward for more advanced cases of consumption is much needed in this district, and should, in my opinion, be erected in the immediate vicinity of this institution.

Dunedin Infectious-diseases Hospital.

Chairman of Hospital Committee : J. H. Walker.

Usual date of meeting of Hospital Committee : Monday evening, alternate.

Medical staff, stipendiary : A. R. Falconer, B.A., B.Sc., M.B., Ch.B. (N.Z.), D.P.H. (Lon.) (non-

resident).

Sister in charge : Janet A. Moore.

Localities, broadly, from which patients came : Dunedin and suburbs.

Visited, 2nd March, 1912.

Four of the patients were nurses.

I recommended Dr. Falconer to ask for the interior to be thoroughly cleansed and have the walls repaired and painted with kalsomine.

Additional accommodation is required for scarlet-fever cases.

VINCENT HOSPITAL AND CHARITABLE AID BOARD.

No fixed date for meetings.

Chairman : William Laidlaw.

Secretary : J. Duthie, part time.

Institutions under the Board's control: Dunstan Hospital, Cromwell Hospital, and Ophir College Hospital.

Dunstan Hospital, Clyde.

Chairman of Hospital Committee : John Smart.

Usual date of meeting of Hospital Committee : Second Monday of calendar month.

Medical staff, honorary : George Alexander Morris, Cromwell ; H. Barr, M.B., Alexandra South. Medical staff, stipendiary : John Galbraith Hyde, M.B., L.R.C.P.S. (Edin.) (resident). Matron : May Robertson Logan.

Localities, broadly, from which patients came : Alexandra South, 11; Vincent County, 35; Hindon, 1.

Inspected, 27th November, 1911. Beds for 4 females and 6 males. There were 2 female and 2 male patients in the Hospital. One of the males was an old Chinaman suffering from locomotor ataxia, and the other an appendicitis case who had been successfully operated on.

There were also 2 old men in the old wooden part of the building. One of these was insane, and arrangements were being made to send him to Seacliff. The other was suffering from senile decay.

I met the Chairman and some members of the Committee at the Hospital, and discussed the proposed new building. I told them that any addition to this Hospital should be suitable for the accommodation and isolation of infectious cases, and that it could be used for treatment of consumptives when not otherwise required.

A building similar to that put up in Naseby could probably be erected at Dunstan for £500.

This building could be erected on the north side of the Hospital-say, about 30 yards away from the main building.

If further additional accommodation is required for the nurses, it would be better to provide this by additions to the present building rather than to put all the additional accommodation in the infectious-diseases block.

The Hospital was in good order.

The grounds were not well kept.

Cromwell Hospital.

Chairman of Hospital Committee : James Ritchie, jun. Usual date of meeting of Hospital Committee : Second Tuesday in each month.

Medical staff, honorary : John G. Hyde, M.B., L.R.C.R.S.

Medical staff, stipendiary : G. A. Morris, M.B., C.M. (non-resident).

Matron : Annie Elliott.

Localities, broadly, from which patients came : Cromwell, Tarras, Ness, Bannockburn, Pembroke, Queenstown, Luggate, Bendigo, Waitiri, Mount Pisa, Lowburn, Morven Hills.

Inspected, 27th November, 1911.

I met some members of the Committee, and discussed with them the proposed new building for maternity cases. It had been contemplated putting it in a paddock 200 yards away from the Hospital, but the members agreed with me that it would be better to put it close to the present buildings, and connect by a short corridor.

When this building is being erected the opportunity will be taken to install water-closets in the old building.

It is also proposed to alter a small store-room so as to make it suitable for operations. It is difficult to make any small alteration in the Hospital that will really improve matters.

There were 2 female and 3 male patients.

The Hospital was in good order, and the grounds and gardens well kept. All the milk and butter required is obtained from cows kept on the Hospital grounds.

MANIOTOTO HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting: First Wednesday in month.

Chairman : C. J. Inder. Secretary : H. Wilson, part time.

Public Health Inspector : R. McKenzie.

Institutions under the Board's control: Maniototo Hospital, Naseby; St. Bathan's Cottage

Hospital.

Maniotolo District Hospital, Naseby.

Chairman of Hospital Committee: Frederick W. Inder.

Usual date of meeting of Hospital Committee : Last Tuesday in each month. Medical staff, stipendiary : C. O. Lillie, M.B., M.R.C.S. (non-resident).

Matron : Jessie B. Diack. Localities, broadly, from which patients came : Maniototo County, 45; Naseby Borough, 35: outside, 3.

On the 29th November, 1911, visited this Hospital with the Chairman of the Board and members of the Committee.

There were 9 beds for males and 6 for females and 3 beds for maternity cases. There were 5 male patients and 1 female.

Improvements have been effected by clearing away the old buildings to the west of the main building and preparing the site for the new infectious disease annexe.

A contract has been let for the erection of this building in wood, with plastered walls, for £535. The Hospital was in good order.

SOUTHLAND HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Thursday preceding second Friday in each month.

Chairman : A. F. Hawke.

Secretary: T. Ryde and two assistants.

Health Inspector : Ralph Bleakley.

District Nurse : Alice Searell.

Institutions under the Board's control: Southland Hospital, Invercargill, general hospital; Seddon Memorial Hospital, Gore, general hospital; Wakatipu District Hospital, Frankton, general hospital; Arrow District Hospital, Arrowtown, general hospital; Kew Fever Hospital, Kew, infec-tious diseases; Lorne Farm Home, Makarewa, benevolent home for children and aged people.

Southland Hospital.

Chairman of Hospital Committee : A. F. Hawke.

Chairman of Hospital Committee : A. F. Hawke.
Usual date of meeting of Hospital Committee : Thursday before second Friday in month.
Medical staff, honorary : A. F. Ritchie Crawford, M.B., Ch.B.; W. Ewart, M.B., Ch.B., F.R.C.S.;
R. H. Hogg, M.B., Ch.B., M.R.C.S., L.R.C.P.; J. Hunter, M.D., C.M., L.M.K.Q.C.P.; J. B. Sale,
M.B., Ch.B.; C. B. Snow, M.B., Ch.B.; J. Young, M.B., C.M.; W. Stewart, M.B., C.B.; J. Collins,
M.B., Ch.B., M.R.C.S., L.R.C.P.; J. Garfield Crawford, M.B., Ch.B., F.R.C.S., L.R.C.P.; J. G. Macdo nald, M.B., ophthalmic surgeon; J. A. Pottinger, M.B., F.R.C.S.; Agnes A. Baird, M.B., B.S.
Medical staff, stipendiary : William J. Barclay, M.D., F.R.C.S., D.P.H. (resident).

Matron : J. Ewart.

Localities, broadly, from which patients came: Southland County, 327; Invercargill Borough, 243; Bluff, Stewart Island, and shipping, 76; Wallace County, 17; Lake County, 6; Clutha County, 3; Christchurch, 3; Gore, 1; Tuapeka County, 1.

Visited on the 10th March, 1912.

There were only 40 cases in-10 in the male ward downstairs, 7 upstairs in the convalescent ward; 3 in the children's ward; 11 in the women's ward, 5 in the convalescent ward; and 4 in the consumptive shelters.

The theatre was prepared for operation. The small theatre for septic cases seems a very unnecessary provision, as the amount of surgical work is not very great. A great number of the surgical cases go to the two private hospitals in Invercargill.

The sanitary annexes are still very primitive, and an attempt should be made to introduce a proper system.

The Hospital was in very good order.

The Nurses' Home is most comfortable.

Gore Hospital.

Chairman of Hospital Board : A. F. Hawke.

Usual date of meeting of Hospital Committee: Thursday before second Friday in month.

Medical staff, stipendiary : Joseph Ernest Rogers, M.D., M.S. (non-resident).

Matron : Miss Madeline Smaill.

Localities, broadly, from which patients came: Gore Borough, 34; Mataura, 17; Wyndham, 15; Waikaia, 16; Southland County, 68; Tuapeka County, 2; Clutha County, 1; Lake County, 1; Invercargill, 1; Mosgiel, 1; Cromwell, 1.

Visited, 7th March, 1912.

There were 12 patients-8 male and 4 female.

New laundry and drying-room have been erected.

Hospital and Hospital grounds in excellent order. Boiler-house leaks badly in wet weatherto be remedied.

The Matron says it is difficult to keep the wards warm in cold weather, and it has been suggested that hot-water radiators could be installed and heated from the present boiler-house with some slight alterations.

It is proposed to erect a new operating-theatre. The present theatre is certainly small, but Dr. Rogers states that though this is rather inconvenient he can manage fairly well.

If there is to be any further expenditure on this Hospital, it would be better spent in providing an isolation ward for infectious diseases, which, although not sounding so attractive as an operatingtheatre or a children's ward in the public estimation, is more urgently required than either.

Lorne Farm.

Chairman of Board : A. F. Hawke.

Usual date of meeting : Thursday before second Friday in month.

Medical staff, stipendiary : William J. Barclay, M.D., F.R.C.S., D.P.H. (Medical Superintendent, Invercargill Hospital).

Master : Charles H. Cole. Matron : Mrs. C. H. Cole.

Localities, broadly, from which inmates came : Southland County, 49; Wallace County, 9; Lake County, 5; Invercargill, 66; Gore, 10; Stewart Island, 5; Wyndham, 2; Bluff, 1; Tuapeka County,

1; Canterbury, 2; Dunedin, 1. Visited on 9th March, 1912.

There were 96 inmates-30 men, 10 women, 19 girls, and 37 boys.

New quarters have been built for the Master and the Matron, the staff using the old rooms.

The old laundry is to be adapted for a dormitory for the big boys who are now in the men's wing. W.c. patents have been put in two of the bathrooms inside for the convenience of feeble or sick

inmates. This is not entirely satisfactory, but these conveniences will not be in very frequent use. The night nursery would be improved by the removal of some wooden partitions, which are not

of any use. Being late in the evening, the children were all in-the smallest ones in bed. They all looked well, and the Matron (Mrs. Cole) reported that there had been very little sickness among them.

The whole place was in excellent order.

Arrow District Hospital.

Chairman of Hospital Board : A. F. Hawke.

Usual date of meeting of Hospital Committee : Thursday before second Friday in each month. Medical staff, stipendiary : John Bell Thomson.

Matron : C. Ferguson.

Localities, broadly, from which patients came : Arrowtown, 18; Arrow Junction, 5; Pembroke, 5; Gibbston, 11; Cardrona, 5; Invercargill, 1; Crown Terrace, 3; Wanaka, 1; Lake Hayes, 4; Queenstown, 1; Skippers, 1; Waitiri, 2; Tarras, 1; Bracken's Gully, 1; Glenorchy, 1; Thurby Downs, 1; Wharehuanui, 1.

Inspected, 24th November, 1911.

There are 6 beds for males and 5 for females; isolation block, 2 wards, with 3 beds in each.

There were 3 female patients, suffering from acute rheumatism, debility, and gastritis respectively. There was 1 male patient who had been sent up from Invercargill Hospital two years previously suffering from tuberculosis of the hip and knee joints. Dr. Thomson was away and Nurse Ferguson

had only been in charge for one week. If it is intended to keep this Hospital open it should be brought up to date by expenditure of

money on additions and improvements of the water-supply and drainage.

A new laundry is required, the water should be extended to the isolation block. The isolation block at present has no sanitary fittings and no water-supply. I understand it is used for typhoid cases.

18—H. 31.

Wakatipu Hospital, Queenstown.

Chairman of Hospital Board : A. F. Hawke.

Usual date of meeting of Hospital Committee : Thursday before second Friday in month.

Medical staff, stipendiary : Alexander Stewart, M.B., M.S.

Matron : Ethel Clare.

Localities, broadly, from which patients came : Queenstown and Frankton, 36 ; Lake County, 35 ; Dunedin, 1.

Inspected, 24th November, 1911.

There are 9 beds for males and 6 for females; in isolation block there are also 3 beds for males and 2 for females. More could be accommodated if required.

There were 5 males in on November 24th. One of these is an old man aged 75 suffering from hemiplegia, he has been in for two years and a half; another is a man aged 67, who has been in for four months, he was suffering from paralysis of the deltoid, and improvement is improbable. Both these men should be sent to the Old Men's Home. The other 3 patients were suffering from varicose ulcers, acute bronchitis, and acute rheumatism respectively.

The new system for heating the wards by hot water has recently been installed, and is satisfactory. A new oil-engine for pumping water from the lake has just been put in, and is working satisfactorily.

I understand that the Board contemplates installing water-closets shortly; there should be no difficulty in disposing of the drainage on the shingly soil.

As milk costs 6d. a quart, the question of keeping cows on the Hospital premises was considered, but was abandoned, owing to there being practically no feed during most of the year.

The Hospital was in good order.

Kew Infectious-diseases Hospital, Kew.

Chairman of Institutional Committee : A. F. Hawke.

Usual date of meeting of Hospital Committee : Thursday before second Friday in month.

Medical staff, stipendiary : William J. Barclay, M.D., F.R.C.S., D.P.H. (non-resident).

Matron : Mrs. M. Cowan.

Localities, broadly, from which patients came : Invercargill, 6; Bluff Borough, 1; Southland County, 9.

WALLACE AND FIORD HOSPITAL AND CHARITABLE AID BOARD.

Usual date of meeting : Thursday preceding third Friday each month.

Chairman : John McNaughton.

Secretary : George O. Cassels, part time.

Institution under the Board's control : Wallace and Fiord Hospital.

Wallace and Fiord Hospital.

Chairman of Hospital Committee : John McNaughton.

Usual date of meeting of Hospital Committee : Thursday preceding third Friday each month. Medical staff, stipendiary : N. G. Trotter, M.D., M.S. (Edin.) (non-resident).

Matron : Charlotte M. Bird.

Localities, broadly, from which patients came: Wallace County, 206; Southland County, 6; Otago, 1; Wakitipu or Lake County, 1.

Visited on the 9th March, 1912.

There were 8 women and 1 child in. Three of the women were in the nurses' dining-room while the building was going on, and the nurses were using the convalescent room off the kitchen. There were 7 men inside, and 1 old Chinaman, who really should be in an old people's home, was in the old isolation cottage. All the other cases were true hospital cases.

The new theatre is a great improvement, but, unfortunately, is spoiled by the large bolier being inside, the idea being to use it for heating purposes. A new glass operating-table has been provided and other aseptic furniture. The old theatre is now fitted up as the sterilizing-room.

There were no cases in the isolation hospital.

The addition to the men's ward is nearly completed, and, when finished, the whole will be a fine ward, and should provide sufficient accommodation for some time to come.

More room is needed for the nurses. The possibility of converting the old isolation building for this purpose is worth consideration. Two or three rooms added to it would make quite a nice little Nurses' Home, as the cottage itself is in good repair, and would only need slight alteration and thorough renovation.

SEPARATE INSTITUTIONS.

Oamaru Hospital.

Chairman of Hospital Trustees: John Mainland for 1911-12; W. C. McDouall for 1912-13.

Usual date of meeting of Hospital Trustees: Third Tuesday in each month. Medical staff, honorary: A. Douglas, M.B.; James Whitton, M.D.; R. G. S. Orbell, M.D. Medical staff, stipendiary: K. McAdam, M.B., Ch.B. (N.Z.), M.R.C.S. (Lon.) (non-resident).

Matron : A. G. Keddie.

Localities, broadly, from which patients came: Waitaki County, 100; Oamaru Borough, 106; Hampden Borough, 2; Otago, 3.

Visited, 6th February, 1912.

Fourteen patients, comprising 8 males and 6 females.

A female patient aged 50, suffering from rheumatic arthritis, has been in for a year. This is not a suitable case for a hospital.

Alterations and additions have been carried out in the infectious-diseases annexe which make it much more suitable for accommodation of patients and for the nurse.

The matter of providing accommodation for incurable consumptives is under consideration, and I have recommended the erection of two shelters for males and two for females. There is one case of tuberculosis being treated in a sun-room.

The fees payable— £1 per week—are too low; I think more fees could be collected from patients, and have suggested to the trustees that they make use of Inspector McKenzie for this purpose.

Lighting in operating-theatre by gas could be improved by having inverted burners.

A new hospital register is required and suitable diet-sheets.

The walls look bright and clean, having been recently painted.

The septic tank should be removed, as the drainage is now connected with the town drainage. New beds have been obtained for some of the wards.

The gardens are somewhat neglected, owing to the frequent changes of gardeners.

Mercury Bay Hospital.

Chairman of Hospital Committee: D. A. McLean.

Usual date of Committee meeting : Second Saturday in each month.

Medical staff, stipendiary : J. I. Eade, M.B., B.S. (resident).

Matron : J. M. Hay.

Localities from which patients came : Whitianga, 39; Tairua, 33; Kuaotunu, 16, Gumtown, 19; Auckland, 2.

Visited on the 9th February, 1912, and found all in good order.

One woman was a maternity There were 9 patients in-6 men, 2 women, and a baby. case (confined at] the Hospital), and with a tumour, which the doctor proposes to remove later.

The chief part of the work of this Hospital is surgical, and a good many major operations are

done. There had been 7 appendicitis cases during the year—4 urgent and 3 chronic; 3 herniæ; 2 Alexander; 1 extra-uterine; one large ovarian cyst; 1 ventro-fixation; 1 goitre. All had recovered. The additions to the Hospital have not been proceeded with — the Board has not collected sufficient money; and I was informed by the Secretary that, in view of the sawmills closing in a few years, the Board now does not consider it necessary to provide more accommodation.

The addition of a bathroom for a female ward and the staff is, I think, very necessary, and could be made at small expense.

Jubilee Institute for the Blind.

Chairman of Institutional Committee : John Reid.

Usual date of meeting: Second and fourth Wednesday in each month.

Medical staff, honorary: A. E. Marsack, L.R.C.S., L.R.C.P. (Edin.); A. C. Purchas, M.R.U.S. (Eng.).

Principal : Charles H. Frayling.

Matron : Kate S. Minchin.

Localities from which inmates came : Various parts of the Dominion.

Visited on the 13th October, and went through the institution with Mr. Frayling. The Matron was out.

There were 74 inmates.

I saw the children at their different classes and afterwards during recreation-time : they were singing part-songs for Mr. Reid, the Secretary, who teaches them singing. They looked well and seemed bright and happy, especially the girls. Their dormitories are beautifully airy and well kept; also the class-rooms and recreation-rooms.

I saw the older girls and the men at their various trades of basket-making, chair-mending, matmaking, netting, and so on.

A contract had been accepted by the Auckland Hospital for 25 lounge, which were being made in excellent style.

I visited the sepa ate cottage for the older men. It was in fair order, but so much cannot be expected here, the one man being responsible for cooking and general care of the place.

Wellington Convalescent Home.

Chairwoman of Institutional Committee: Octavia Newman. Usual date of meeting: First Wednesday of every month.

Matron: A. Oakley.

Localities from which inmates came : Wellington and district.

Institute for the Relief of the Aged Needy.

Chairman of Institutional Committee: William Allan.

Usual date of meeting : Second Thursday in month. Medical staff, honorary : Dr. F. T. Bowerbank, Dr. A. T. Perkins.

Master: Peter Mackenzie.

Matron: Euphemia Mackay.

Localities from which inmates came : Wellington and neighbourhood.

Visited on the 1st May.

There were 43 inmates, 20 of these being women. Two inmates were away for treatment at the General Hospital.

As usual, this institution was in very good order, and the old people contented and well cared for.

140

SUNDRY CHARITABLE INSTITUTIONS.

Mount Magdala.

Visited on the 15th March.

There were 160 women in of varying ages, and in the separate house 76 children.

The women were engaged in laundry-work, sewing, mending, and two or three in lace-work.

The place was very clean, and the large and airy dormitories with comfortable beds had just been scrubbed out.

The waifs and strays of society who take refuge here are well and kindly looked after by the sisters.

The children are educated by a trained teacher. They vary in age from about three to fourteen, the older girls doing the work of the place. They looked well and happy. They have plenty of room for play, and have many toys.

St. Saviour's Home, Burwood.

Visited on the 15th March.

This institution, formerly known as St. Mary's Home for Neglected or Unmanageable Girls, is now used for children only, these being either orphans or neglected.

There were 42 children in the Home; 25 of these go to the public school. There were 13 boys, all under seven. The rest were girls from two years to eleven. Sister Rose, formerly in charge of the Girl's Home, is still here.

Many of the children are sent here by Nurse Maude, of the Christchurch District Nursing branch, who also lives here.

The place was in very good order, and the smaller children under school-age whom I saw looked healthy and well cared for.

Levin Memorial Home for Children, Wellington.

Visited on the 1st Mav.

The children, 26 in number, were home from school and busy at their various tasks, working in the garden and household duties. They looked well and happy. 1 child was under medical treatment. The fire-escape at this Home is shut off from ready access by a bolted door from the balcony. The

Committee has been advised to give directions to keep this doo open.

Some renovation in the sanitary annexes is badly needed.

St. Mary's Homes, Karori.

Visited on the 10th April.

There were 22 girls in the Home for the older girls. Three of these are defective in intellect, and quite unfit to take care of themselves.

The girls were engaged in laundry-work. The washhouse needs reconstruction ; it is by no means a suitable building, or fit for so many young girls to work in. This is recognized by the Committee, and probably will be improved.

Miss Parlane, in charge of the Home, does excellent work among the girls.

In the Children's Home there were 13 children, the oldest being eight. The children attend the public school. Two older girls do the work of the Home, being prepared for service by the Matron.

The children were engaged in gardening. A good supply of vegetables is grown at each place entirely by the girls.

The Homes were both in excellent order.

Nazareth Home, Christchurch.

Visited on the 5th March.

There were 102 children in, 30 old men in the main building, and 23 old men in the main house.

The spacious building was well kept, though rather cold and bare, but the inmates are comfortable and well cared for.

The children are quite apart from the old people. The seem happy and healthy; have large airy dormitories and playrooms, and a good playground outside. The older ones are taught on the State school lines by a sister specially trained for the work.

Karitane Hospital for Babies, Dunedin.

Visited on 10th March.

There were only 8 babies in. Miss Nelson, who was appointed six months ago, had resigned the matronship, and a nurse from

Melbourne was taking temporary charge for four months.

The place has been greatly improved during the last year.

Salvation Army Homes.

Pauline Home for Women, Wellington.

Visited on the 15th May.

There were 36 women in, most of them engaged in laundry-work.

The place was in its usual good order.

Children's Home, Wellington.

There were 54 children in this Home, most of them of school-age.

A Board-school teacher instructs them in a schoolroom on the premises.

Some of the children are here only for a short time while their mothers are in the hospital.

The majority looked very well and happy. One older girl was in bed with dropsy, and another little one is under treatment for hip-disease.

The dormitories and the whole place are kept in excellent order.

PART II.-STATISTICAL.
