

# IN WASTING DISEASES

In Wasting Diseases the necessary stimulus to the absorption of calcium and phosphorus is provided by Glax-ovo, the tonic food beverage.

Its perfect digestibility and ready assimilability commend it in all cases in which a supplementary diet of this nature is indicated.

Its power of promoting calcium-phosphorus metabolism is due to the fact that Glax-ovo contains Ostelin, a highly concentrated preparation of Vitamin D, the factor to which cod-liver oil owes its therapeutic value.
