The Auckined Racing Chib's Spring Meeting, although somewhat affected by the unfavourable weather, was a record one from every point of view. The fields were good and the racing interesting, while the attendances on both days were greatly in excess of linst year. The receipts from the totalisator greatly exceeded the most sangulate exsectations, the increase for the two days totalling IUSE. Considering the Canterbury Jackey Chie only handled the content of the corresponding meeting that they did for the corresponding meeting that year, the rapid advance racing is making in Auckinsal will be easily seen.

When Black Northern raced in Sydney he displayed a lot of plggladness, and could never be induced to try in his races. A correspondent writes calling attention to what he describes at a "disgraceful want of accommodation at Ellersile for the outside public," and unges the club to do something to remedy the existing state of affairs before the summer meeting rolls round. There is no doubt the Metropolltan Club will have to make some better arrangement to accommodate their outside patrons, and the matter is one that should be seen to at once. One or two of the present buildings near the totalisator house could be removed with advantage, while that relic of the Maori War, the Berly stand, should either be pulled down or considerably enlarged towards the eastern ead. A ten room is also eadly required, for it is just a shade over the odds that a metropolitan club should respect to the use of a tent as a makeshift. There will probably be some 15,000 present at Ellersile on Boxing Day, and trouble is sure to ensue if provision is not made for their accommodation.

Anckland visitors who have periodically visited the Canterbury Jockey Club's meetings have expressed dissatisfaction with the working of the totalisators, but evidently there is an awakening to the facts even in Christchurch. The "Casterbury Fines," in commenting on the state of affairs, says:—Loud and frequent were the complaints to be heard upon the working of the totalisator during the four days' racing, and it would certainly appear that there is room for much improvement. The changing of the total on the winning horse after the race has been run is one matter that registres explanation, and the incorrect calculation of the dividend on at least one winnings horse on Saturday called forth strong comment from those who left that the cast one will independ the satisfaction of the dividend on the set of the public, and devise some more satisfactory method or system for the working of the machine, which has never given the satisfaction that might be expected from it.
