

improve upon that performance Mr. Moreland continued her in test the following season. On this second season's work she has been credited to the end of April, in 253 days, with 9,448.40 lb. milk, containing 434.31 lb. butter-fat. Nor does the record of Golden Swan's Lilac do her justice, although she is credited with 314.60 lb. fat, commencing her record under two years of age. She, in her second year's test, is also doing better work. Another daughter doing her sire credit is Golden Swan's Lady. Her present certificate of record credits her with a yield of 276.79 lb. fat in 281 days, commencing at less than two years of age. Her second season's credit to the end of April, for 304 days, is 8,744.30 lb. milk, containing 468.84 lb. butter-fat.

At the time of writing the highest-record daughter of Golden Swan is Snow Bird, owned by Mr. C. A. Willis, of Pukekohe. This heifer commenced milking at the age of two years five days, and produced 395.16 lb. fat. Although a very creditable performance, it also is likely to be superseded by this cow on her second season's work. Doubtless, Golden Swan's progeny will be held in even higher esteem as they attract attention to their powers of production.

Good Luck.—The C.O.R. daughters of Good Luck were all owned and tested by Mr. C. Stevens, of Maungatapere, North Auckland. Their productions were made under conditions not the most favourable for making the best records, and still the figures are creditable.

Ava, in 363 days, as a three-year-old, produced 366.40 lb. butter-fat, and as a yearling Lucky Dorothy produced 311.99 lb. fat. In the two-year-old class Lady Hope III produced 319.80 lb. fat; and Allie, as a three-year-old, produced 327.65 lb. butter-fat in 344 days.

Eminent's Fontaine.—Owing to the late arrival of a declaration one of the daughters of Eminent's Fontaine, finishing her record during 1915, was not included in the number credited to this bull in the February issue of the *Journal*. This bull's credit should therefore read as six C.O.R. daughters having qualified during 1915, and ten C.O.R. daughters since the commencement of the testing-system.

FRIESIANS.

Longbeach Van Tromp.—The name of this sire, which was bred and owned by Mr. J. C. N. Grigg, of Longbeach, is as well
