

figures for two generations, and that the strains indicated in a number of the pedigrees have been well proved as producing-lines.

FRIESIANS.

Colonel Manor of Riverside.—The name of the Friesian bull Colonel Manor of Riverside has been brought to the fore as the result of testing work done by Messrs. C. A. Hopping and J. Liggins. This bull was imported by Mr. C. Hopping, and is the sire of five certificate-of-record daughters, all of which were bred by Mr. Hopping.

The best record held by any one of this bull's daughters is that of Lady Mooie Blanco III of Ashlynn. She commenced her test at

COLONEL MANOR OF RIVERSIDE.

the age of 5 years 295 days, and in 321 days produced 15,022.40 lb. milk, containing 652.21 lb. fat. Doubtless this cow inherited some of her ability as a milker from her dam, which in 241 days produced 10,602.80 lb. milk and 401.43 lb. fat. Not only is Lady Mooie Blanco III a heavy producer of milk and butter-fat, but that she transmits her qualities to her offspring may be noted from her daughter's record as a three-year old, which stands at 14,671.70 lb. milk, containing 626.06 lb. fat, in 290 days.

Sunflower of Ashlynn, in the three-year-old class, produced a record which reflects credit on her sire, Colonel Manor of Riverside. In 251 days she gave 11,308.80 lb. milk, containing 498.30 lb. fat. Riverside Violet, another daughter of this bull, was tested by Mr. C. A. Hopping as a two-year-old. In 297 days she produced 11,762.20 lb. milk, containing 398.98 lb. fat.
