CATTLE-TICK INVESTIGATION BULLETIN.

A BULLETIN entitled "The Cattle-tick (*Haemaphysalis bispinosa*): Investigations during 1923-24" (No. 116) has been issued by the Department. The author is Mr. J. G. Myers, of the Biological Laboratory Staff, Wellington (at present in America), who contributed to the *Journal* of May, 1924, a summary of this his main report on the subject. The bulletin is of 105 pages, royal octavo size, with seventeen illustrations, and a limited edition only has been printed. For this reason it can be supplied only to special applicants.

Rabbit-control in Manawatu.—Regulations under the Rabbit Nuisance Amendment Act, 1920, were gazetted on 23rd January, the effect of which is to suspend trapping in the Manawatu Rabbit District except by permission and under conditions specified by the Board.

Wet-weather Work.—When rain prevents outside work at this season, time may profitably be devoted to the cleaning and oiling of the haymaking and harvesting machinery.
