

FIG. 3. A SECOND CROP OF THE TEMPORARY PASTURE; CUT IN JANUARY.  
This was an even mixture of rye-grass and cow-grass.

FIG. 4. LAMBS ON AFTERMATH OF THE TEMPORARY PASTURE, FIVE WEEKS AFTER SECOND CUTTING.

The growth in this case was chiefly cow-grass.

considerable, must be taken into consideration. The quality of the grazing is shown in the increase in weight that lambs have made on the aftermath of clover after the second cut of hay. During February of this year twenty-four cull lambs were weighed and turned on to the clover. At the end of a fortnight they were again weighed and found to have put on an average of  $4\frac{1}{2}$  lb. per head.
