

FIG. 9. SUPERPHOSPHATE (EXPERIMENT NO. 389).

A poor sward of paspalum and stunted suckling and white clovers on peat (Kaipaki peat loam, Waipa County). Superphosphate alone has not increased clover-growth.

FIG. 10. SUPERPHOSPHATE PLUS POTASH (EXPERIMENT NO. 389).

Superphosphate and potash together have greatly improved white-clover growth. (See Fig. 9.)
