ALLIS-CHALMERS

TRACTOR

Autumn's the time to clean up harvesting ; to renovate pasture lands ; to plough, sow, cultivate, before winter makes ground unworkable. Below we describe two Allis-Chalmers models. One of them is the tractor that fits your farm ; the tractor that will help you put through autumn jobs faster, cheaper, and more easily than ever before. Remember, they were designed and built by the 93-year-old organization of Allis-Chalmers ; world leaders in agricultural machinery.

THE MODEL 'W' This Allis-Chalmers is everything a medium tractor should be. The 23 H.P. engine operates on petrol or power kerosene and is geared to a road speed of 10 m.p.h. with working speeds of 2½, 3½, and 4½ m.p.h. On the drawbar this beauty pulls two fourteen inch ploughs in any going; it drives a 23 thrasher on the belt. Because of its perfect construction and governor controlled engine its fuel cost per working mile is amazingly low. Features include removable cylinder liners of special alloy-steel; tungsten tool steel valve inserts; triple dust protection; the world's most efficient cooling system; cushioned seat and back rest, and an exclusive Allis-Chalmers feature, all traction differential, ensuring positive traction under all conditions. On medium to large farms this Allis-Chalmers will bring new speed to all your autumn work and it will halve your cost. It is available with full view power mower, easily and speedily detachable by operator without assistance.

Other ALLIS-CHALMERS Tractors Include:—Model "W.F.," 23 H.P.—Model "U," 35 H.P.—Model "A," 44 H.P.—Model "W.M.," 30.98 H.P. Crawler Tractor—and the big Diesel Tractors "K.O.," "S.O.," and "L.O."

THE EVERYFARM MODEL 'B'

This . . . the lowest-priced rubber tyred tractor on the market has more speed, mobility, endurance and honest pulling power than other jobs costing up to £50 more. The perfectly designed overhead valve, four cylinder engine is governor controlled and gives power to burn on a benzine or kerosene ration that sets new low levels in this class. Advanced Features include renewable cylinder liners, full pressure lubrication, three speeds and reverse gear-box, triple protection against dust and dirt, and many others. For hauling, harvesting, cultivating, ploughing, for all power jobs on small to medium farms, there is no tractor to approach the Allis-Chalmers Everyfarm Model 'B.' A demonstration proves it. Price with Rubber Tyres all round. **£210**

With belt pulley and power take-off, £15 extra. f.o.r. Main Ports.
