

Useful Dehorning Bail

IN these days, when every care is necessary that fat cattle should arrive at the killing works without blemish through bruising, it becomes more and more essential either to breed hornless cattle or to see that the horns are removed as early as possible.

Dehorning the calves with caustic soda, while practicable on dairy farms, is not possible with run cattle or fat stock generally, and a good dehorning race and bail is still required on many farms where horned cattle are raised or fattened.

The photographs are of a dehorning race and bail as used in Hawke's Bay. This bail has much to recommend it. One man can operate it with ease, the bail remaining

closed without any fixture. Such dehorning race and bail can be constructed to open out of any cattle drafting yards. In operation, the bail illustrated has also proved its effi-

ciency in reducing to a minimum the danger of injury to grown cattle during dehorning.

The G.V.B. Still Leads!

All over New Zealand, the G.V.B. MILKER has established itself—favourably and firmly in every shed where even the shortest trial has definitely proved an unexcelled standard of efficiency.

QUARTER TROUBLE? A random selection made recently of 310 herds (14,765 cows) constantly milked with the G.V.B. showed that **ONLY 2 PER CENT.** went out with this complaint.

FACTS THAT ARE FACTS CANNOT BE OVER-EMPHASISED. The progressive sales record, reaching the high total of 6000 units in a period of seven years speaks for itself. **THE NOW WELL KNOWN PRINCIPLE OF THE G.V.B. HAS COME TO STAY!**

Convert your Old Plant to G.V.B.

● "The Heart Of The G.V.B." This governs the action of the Milker, to make it natural and calf-like, and is embodied in all G.V.B. installations.
