

ANOTHER TOMOANA TON LITTER...

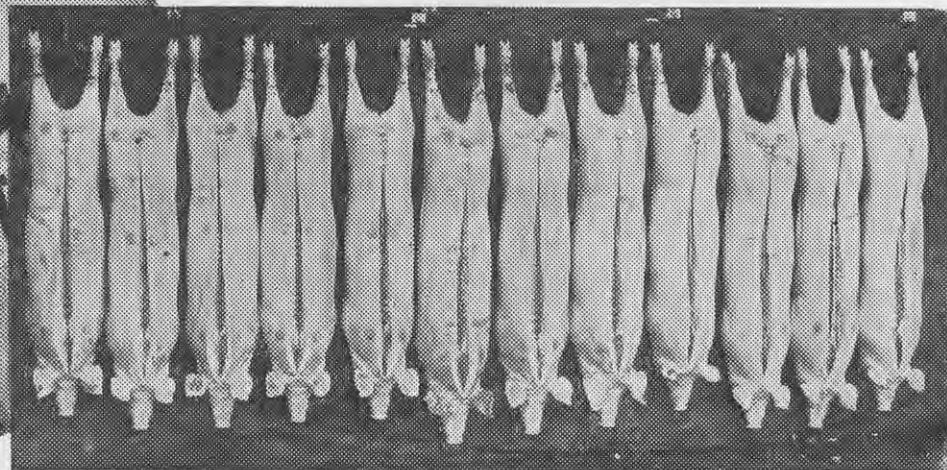

*Tomoana Pig
Concentrate
does it again!*

2000 pounds of Pig Meat in 200 days—
over £60 worth of badly needed food

IN August 1944, a maiden sow (owned by Mr. D. McNiece of Paeroa) farrowed this litter of 12. Before killing, the litter weighed approximately 2660 lbs. On the hooks the total weight was 2005 lbs. of pig meat. Their breeding—a Large White cross. Their feeding—TOMOANA PIG CONCENTRATE, Green Maize and dairy by-products.

This ton litter, besides being a tribute to Mr. McNiece's pig husbandry, is conclusive proof of the value of TOMOANA PIG CONCENTRATE for balancing properly the nutrition of young and growing pigs—proof that it pays to supplement early and keep litters growing all the time. What others can do, YOU can do. Write to W. & R. Fletcher (N.Z.) Ltd., G.P.O. Box 663, Wellington, for fully illustrated literature.

*Pigs are more profitable than ever when you
feed TOMOANA PIG CONCENTRATE*
