

Latest Treatment for Fly-Struck Sheep

COOPER'S MAGGOT DRESSING

This combines "Gammexane" (B.H.C.) and D.D.T. in specially processed form. Cooper's Maggot Dressing differs from all others in that besides killing newly hatched maggots, it expels the larger ones from the fleece instead of leaving them to putrify and attract more flies. Moreover, it protects the wound against restrike and assists healing. Other advantages are that it does not stain the fleece or cause irritation or "burning" either of the sheep's skin or operator's hands.

COOPER'S MAGGOT DRESSING
is **NEW** and
OUTSTANDINGLY EFFICIENT

Available in one gallon drums and 16oz. tins. 1 part is mixed with 19

parts water. A 16oz. tin makes 2 gallons of Maggot Dressing.

Branding without Mess or Wastage FLEXOPAD

Users confirm that the FLEXOPAD Automatic Brander takes the mess and wastage out of the branding operation and quickly pays for itself in saving of branding fluid, time and labour. It is only necessary to fill the reservoir with fluid and something like 400 sheep can be branded without handling the fluid again or wasting a drop. Your stencil brand is cut on the face of a leather pad underneath—a job any saddler can do for you or you can do it yourself. A firm pressure on the animal leaves a clear-cut, lasting brand. Get a FLEXOPAD and benefit by it every time you brand. Over 4000 satisfied users in New Zealand. PRICE 55/-.

Prevention of FLY STRIKE

For the PREVENTION of strike, there is now available a new and highly effective preparation also containing D.D.T. and "Gammexane" (B.H.C.).

COOPER'S POWDER FLY SPRAY

This gives at least 5 to 6 weeks protection with one treatment at a cost of about 3d. per head. Cooper's Powder Fly Spray should be used at the onset of a fly wave or better still, systematic sprayings undertaken each year at a time immediately prior to the date at which fly is normally expected.

Five 2lb. packets make 100 gallons of spray which should be sufficient for upwards of 400 sheep. Bucket pumps or power units can be used.

DAIRY OINTMENT with Great Advantages

COOPER'S DAIRY OINTMENT is NOT "just another dairy ointment". It possesses unique qualities that make it entirely different from anything else in its field. Its exceptionally powerful bactericidal properties enable it to destroy the bacteria most commonly associated with mastitis and also the pus-forming bacteria which cause wounds to suppurate. In physical make-up it is as smooth as vanishing cream and it has the outstanding feature of mixing with water, enabling it to readily penetrate wounds with a watery discharge, and not merely form a skin over them.

COOPER'S DAIRY OINTMENT will not taint milk.

Available in 2lb. tins from Dairy Companies, Stock and Station Agents and Merchants.

Drenching with Ease and Accuracy

VICTOR DRENCHING GUN

The drenching operation is vastly simplified and tedious removed if you use a VICTOR GUN. Outstanding features of this excellent gun are its accuracy, simplicity, light weight and sturdy construction. Designed for Phenothiazine, nicotine-sulphate and all water-based drenches. The pistol is calibrated up to one fluid ounce, and if larger doses are required it is simply necessary to give two light pressures. PRICE £11 (subject to alteration).
