

NEW OLIVER '50' TWO-WAY TWINE- TIE BALER!

Completely new! Big in capacity! Choice of two-way power—PTO or engine! Take your pick—the power take-off machine that's handled easily by any two-plough tractor, or the engine-equipped model for maximum hour-after-hour production. Hay is fed straight into the bale chamber by the "floating" auger, not taken around corners that shatter valuable leaves.

Come in and see his new champion of twine-tie balers. See the full 53-inch, full-floating pickup . . . fully-enclosed, heavy-duty transmission . . . safety-type packer fingers . . . simple, sturdy knoter . . . flip away bale chute.
