MOTOR CYCLES

The Light-Weight F.N. Motor

will appeal to those riders who cannot find storage for a heavy machine, who live in hilly districts, who have to do a great deal of traffic riding. Speed from 4 to 28 miles an hour. All riders that do not care for excessive speed, but like to move about with safety and comfort, will find the light F.N. the nearest approach to the ideal machine yet produced.

The RUSSELL

Model D represents the best value obtainable in light touring cars. Two-cylinder horizontal opposed engine of 18 h.p., simplicity and ease of access special features; jump-spark ignition, thermo-siphon system of water circulation, positively-driven lubrication, metal-to-metal disc-type clutch, sliding gear selective type of transmission, floating type of rear axle, two independent sets of brakes.

Correctness in Design, excellence of material and manufacture, and the ability of the manufacturer to make good his guarantee are points associated with the Russell

After exhaustive trials the New Zealand Government has decided to instal a RUSSELL CAR for the purpose of clearing letter boxes, etc.
