on Reaction Records thru **RCA**

### NEW SIMMONS DRUMS

## SDS 1

(AVAILABLE SOON)

**SDS1**  
Single digital  
drum pad.  
Add to your existing  
Simmons or acoustic kit.

**SDS-EPB**  
Digital sound  
sampler and  
EPROM loader.

New from Simmons is the SDS 1, a battery powered, self contained, digital drum. Its sounds are digitally recorded and easily interchangeable, either from the library of sounds available at your Simmons dealer or, more excitingly, from your own personally sampled collection care of the revolutionary sampling and EPROM "blowing" device, the SDS EPB.

The SDS 1 is housed in a full sized, hexagonal Simmons pad, complete with the new rubber playing surface and facilitates perfect dynamic control over volume, pitch bend (up or down), attack and brightness.

Connections are provided for battery eliminator and external trigger, accepting signals from drum machines, miked acoustic drums, drum tracks off tape, sequencers etc.

Perhaps the most unique feature of the SDS 1 is the run "generator". When implemented, this instructs the instrument to output the selected sound at a lower pitch for each consecutive strike of the drum. With control over run time and run amount, it is ideal for huge concert tom fills.

**SIMMONS**

"makes the others sound 'Japineze'"

For further information on the drums with todays sound, write or call NZ distributor and service agent.

Live Sound Ltd, Box 68-216, Newton, Auckland Ph: 789-125
