

FIG. 24.—*Dityloura dasygnatha*: syntelopodite clinal form. Fig. 25 *D. notohyla*: rear view of syntelopodite holotype. Fig. 26 *D. lissognatha*: rear view of syntelopodite holotype. Figs. 27, 30. *D. unicostata*: 27, syntelopodite holotype; 30, epigyne. Fig. 28 *D. cothonognatha*: epigyne. Fig. 29 *D. trachypyga* epigyne.

Scale = 0.25mm.

tubercles cylindrical longer than those of *D. lissognatha*, lateral tubercles small, large ridge on each anal valve. Sternites IV–V, VIII–XII slightly raised near coxae, each swelling with a dense tuft of setae, following sternites not raised and only lightly setose, two very large tubercles arising between the hind coxae of segment XVII and projecting backwards. VII
