

## ACKNOWLEDGMENTS

This paper presents some of the results incorporated in a thesis submitted to the University of Auckland. Special acknowledgment is made of the aid given by Professor R. N. Brothers in the field and laboratory and during the writing up. Thanks are also extended to Associate-Professor E. J. Searle and Dr P. F. Ballance, who offered constructive criticism on the original draft, and especially to Mr J. A. Grant-Mackie, who advised on stratigraphic problems and suggested improvements to the manuscript.

Members of the New Zealand Geological Survey are thanked for their help. Dr N. de B. Hornibrook identified a number of foraminiferal samples and updated earlier age determinations. Dr G. H. Scott allowed publication of unpublished microfaunal data and Dr W. F. Harris and Mr D. J. McIntyre examined several samples collected for microfloral study.
