A Bibliography of the Indigenous Freshwater Fishes of
New Zealand

By R. M. McDOWALL,

Fisheries Laboratory, Wellington

[Received by the Editor, February 5, 1964.]

INTRODUCTION

THE object of this bibliography is to facilitate access to reference literature on New Zealand fresh-water fishes. The need for a bibliography arises from the rapid increase in the amount of information being published.

Scope of the bibliography has been restricted to indigenous fishes (including Cyclostomes) which spend a significant part of their lives in fresh-water. The term "indigenous fishes" has been taken to mean those species naturally present in New Zealand, its off-shore islands, the Chatham Islands, and the sub-Antarctic islands of New Zealand. References to fishes which are not restricted to New Zealand (*Geotria australis* Gray, *Galaxias attenuatus* (Jenyns), *Anguilla australis* Richardson) have been included whatever the origin of the specimens or information, because they are relevant to the New Zealand fauna. For this reason a number of the references are of Australian or South American origin. Fishes such as *Aldrichetta forsteri* and *Arripis trutta* which make short term incursions into fresh-water, but which are primarily marine fishes, have been excluded. The introduced fishes comprise a rather distinct area of inquiry and have been covered fairly fully in a previous bibliography (see Bassett, 1961). For this reason they have not been dealt with here.

All known publications making reference to indigenous New Zealand fresh-water fishes have been included. The papers vary in scope from a brief listing or natural history note, to the results of extensive investigations. Several popular works have been included, and some of these, especially the older publications, are of considerable value. Nearly all the items listed were examined by the author. Papers not seen are indicated by "†" adjacent to the publication data—e.g.:

GMELIN, J. F. †1788. *Systema naturae*. . . .

In compiling the bibliography, many titles were located from literature citations in publications dealing with New Zealand fresh-water fishes, but in addition, considerable use was made of the following sources:

The zoological record, 1864–1960. Zoological Society of London.

DEAN, B., 1923. *Bibliography of fishes*. New York, American Museum.

HUTTON, F. W., 1904. *Index faunae Novae Zealandiae*. London, Dulau.

PHILLIPPS, W. J., 1927. *Bibliography of New Zealand fishes*. *Fisheries Bulletin, New Zealand Marine Department*, no. 1.

Published by the Royal Society of New Zealand, c/o Victoria University of Wellington, P.O. Box 196, Wellington.

BASSETT, D., 1961. *Bibliography of New Zealand fresh-water fishes.* Wellington, New Zealand National Library Service.

At the beginning of the bibliography, a check-list of the species, with synonymies, is given. The synonymies have usually been derived from the most recent systematic work on each species, but only the more significant papers, especially those of systematic importance, have been included.

In the list of titles, authors are listed alphabetically, and the papers of each author are listed in chronological order. Serial publications have been abbreviated following the form given by Smith, W. A., et al, 1952: *World list of scientific periodicals, 1900–1950*, London, Butterworth. Books have been cited with title, place of publication, publisher and details of pagination, figures, etc. Each reference is followed by annotations of the fishes mentioned and the type of subject matter contained. An asterisk after the species annotation indicates that the species is described in the paper, and the letter "f", that the species is figured. When a species has been referred to in the paper only by a vernacular name—e.g., kokopu, eel, the annotation given is that of the family to which the fish belongs—e.g., in the above cases, Galaxiidae, Anguillidae, whether or not it appears obvious which species was referred to. The specific names used in many papers have been incorrect, but even where it is obvious that the usage was incorrect, only the name used by the original author has been annotated, and it is left to the individual research worker to decide for himself what the correct usage would have been. Fletcher (1918), for example, records *Galaxias attenuatus* and *G. fasciatus* from Lake Taupo, but it is now known that the only species present there is *G. koaro*. The annotations to Fletcher's paper are nevertheless for *G. attenuatus* and *G. fasciatus*.

Effort has been made to have the annotations suggest the names for which they stand, and, in general, workers familiar with the nomenclature of the New Zealand fauna should be able to recognise from the annotation the species referred to. Two letters have been used for family names (in capitals) and for genus, and in most cases three letters for species annotations; the generic and specific annotations are in Italics. Where the same species name is used for a number of different fish—e.g., *Geotria australis*, *Anguilla australis*, the same annotation has been used in each case for the species name. Where a number of specific names were used in one paper, in reference to a single species—e.g., in synonymies, all the names used in the paper have been annotated, but where several generic names were used for one species, the species annotations occur only under the ruling generic name in that particular paper—e.g., when *Eleotris gobiooides* was renamed *Gobiomorphus gobiooides* (by Gill, 1863), the annotation for *gobiooides* is found under *Gobiomorphus* and not *Eleotris*.

The items in the list of titles are numbered consecutively in the order of their appearance. These numbers have been used to give an index of the titles dealing with each family, genus and species name. Numbers in this index in Italics indicate the more important papers. In the index, the form of the nomenclature annotations is also given adjacent to each name.

Each paper was annotated according to the subject matter contained. These annotations, as listed below, refer to the discussion of the following topics:—

AFFIN.: The affinities of the New Zealand fish groups and relationships within these groups.

CLASSIF.: The familial classification of a species or genus.

DESCR.: The description or re-description of a species.

DISTR.: The distribution pattern of fishes within a faunal area.

ECOL.: All aspects of the ecology of the fishes except life history, parasitology, and inter-relationships with the introduced Salmonidae, which are covered under other headings. Factors such as habitat, food and growth are included.

FOOD.: Utilisation of fishes by man.

FOSS.: Fossil material.

GEN.: Subject types which appear too infrequently to allow separate annotation, all publications of a popular nature except those which have particular importance, and papers which contain little significant information.

LIST.: The entry is part of a faunal list, or the mention is so brief as to provide no further information than a listing.

L. HIST: Life histories.

MORPH.: Morphology and structure.

PARASIT.: Parasitology.

SALM.: Relationships between native fishes and the introduced **Salmonidae**.

SYST.: Nomenclature of the fishes at generic and specific levels.

ZOOG.: The zoogeography and distribution mechanisms of the New Zealand fauna on a world-wide basis.

In papers not seen by the author, an attempt has been made to give annotations derived from information in later publications which refer back to the papers not seen. These annotations should at least indicate the nature of the paper involved.

ACKNOWLEDGMENTS

The author wishes to thank the librarians of many Wellington libraries who willingly assisted in locating publications, but more especially the librarians at the Turnbull Library, Mrs H. Elliott, of the Fisheries Library, Mrs M. Allehand, Royal Society Library, and Miss M. M. Hall, Dominion Museum Library. Mr J. M. Moreland, Dominion Museum, gave considerable assistance in locating references, and thanks are also due to Mr R. Strahan, School of Biological Sciences, University of New South Wales, for his assistance. I also wish to thank Mr J. F. Podstolski, New Zealand National Library School, for his interest and advice.

LIST OF TITLES

1. ANON., 1944. Australian food fishes VI. Tasmanian whitebait. *Fish. Newslett. Aust.* 3(6): 2-3. *Re; Gl att. Ecol.*
2. ——— 1949. Two new species of native fish discovered. *N.Z. Aquar. Bull.* 10(3): 29. *EL; GL. Gen.*
3. ——— 1951. Enemies of trout and salmon in New Zealand. *N.Z. Fish. Sh. Gaz.* 18(6): 28-29. *AN. Salm.*
4. ——— 1953. Research aims at maintenance of supplies. *N.Z. Fish. Sh. Gaz.* 20(4): 7. *EL; RE; GL. Salm.*
5. ——— 1960. *Report on the west coast.* Wellington, Government Printer, 90 pp. *GL. Gen.*
- ALLEE, W. C., 1951. *See* Hesse, R., Allee, W. C., and Schmidt, K. P., 1951.
6. ALLEN, K. R., 1949. The New Zealand grayling, a vanishing species. *Tuatara* 2(1): 22-27, 2 figs. *Pr ox f. Gen.*
7. ——— 1951. The Horokiwi Stream; a study of a trout population. *N.Z. Mar. Dept. Fish. Bull.* 10: 1-238, 22 figs., 12 pl. *Gb bas, rad; An aus, dff; Gl att, brp, fas, rob; Ge aus. Ecol; salm.*
8. ——— 1953. Fresh-water fisheries research in New Zealand. *Proc. 7th Pac. Sci. Congr.* 4: 575-580. *An aus, dff; Gl att. Gen.*
9. ——— 1956. The geography of New Zealand's fresh-water fish. *N.Z. Sci. Rev.* 14(3): 3-9, 2 figs. *Ch for; AN; Gl att. Gen.*
10. ——— 1957. Fresh-water fish. In *Science in New Zealand*, pp. 3-12. Wellington, Reed. *Ch for; An aus, dff; Re; Pr ox; Gl att, kro, lx, pcs; Ne. Gen.*
11. ——— 1960. Fresh-water fauna of Wellington. In *Science in Wellington*, pp. 23-24. Handbook 9th N.Z. Science Congress. *Gb bas, gob, rad, Ph brc, hub; An aus, dff; Re osm; Pr ox; Gl al, att, brp, fas. Gen.*
12. ——— 1961. Relations between Salmonidae and the native fresh-water fauna in New Zealand. *Proc. N.Z. Ecol. Soc.* 8: 66-70. *Gb. Ph; An dff; Re; Pr ox, Salm.*

13. ALLEN, K. R., and CASSIE, R. M., 1949. Problems of marine and fresh-water fisheries biology in New Zealand. *Tuatara* 2(2): 53–57. *An aus, dff; Gl att.* Gen.
- ANDERTON, T., 1921. See Thompson, G. M., and Anderton, T., 1921.
14. ARCHEY, G., 1924. Fresh-water eels and their life-history. *N.Z. J. Sci. Tech.* 7(1): 49–51. *An auc, aus.* L. hist.
15. ARMSTRONG, J. S., 1935. Notes on the biology of Lake Taupo. *Trans. roy. Soc. N.Z.* 65(1): 88–94. *Gb gob; Gl brp.* Gen.
16. ARTHUR, W., 1883. On the brown trout introduced into Otago. *Trans. Proc. N.Z. Inst.* 16: 467–512, 2 pl. *El gob; Re rch; Gl att, fas.* Salm.
17. ——— 1884. Notes on New Zealand fishes. *Trans. Proc. N.Z. Inst.* 17: 160–172, 7 figs. *Pr ox**. Descr; gen.
18. AYSON, L. F., 1908. Introduction of American fishes into New Zealand. *Bull. U.S. Bur. Fish.* 28: 969–975. *An aus; Re rch; Pr ox; Gl fas.* Salm.
19. ——— 1912. Sea and fresh-water fisheries. In *New Zealand, its history, commerce and industrial resources*. Playne, S., et al. London, Foreign and Colonial Compiling and Publishing Co., 699 pp. *An aus; Re rch; Pr ox; Gl fas.* List.
- BARDACH, J. E., 1963. See Lagler, K. F., Bardach, J. E., and Millar, R. R., 1963.
20. BASSETT, D., 1961. *A bibliography of the fresh-water fishes of New Zealand.* Wellington, New Zealand National Library Service, 46 pp. Gen.
21. BEAUFORT, L. F. DE, 1951. *The zoogeography of the land and inland waters.* London, Sidgwick-Jackson, 268 pp, 10 figs. *Pr; Gl. Affin; zoog.*
