

FIG. 2.—Proportional composition (by weight) of beach surface samples at "High Water" and "Low Water" levels at four localities on 21 November 1965. H.W. at approximately 5.6ft and L.W. at approximately 1.1ft levels in relation to tide datum, tide levels of this date being assumed the same as predicted. Nomenclature according to Wentworth scale (slightly affected by available sieve meshes —see text); Granule and Fine Sand fractions are shaded.
