

Genus *PTYGURA* Ehrenberg, 1832*Ptygura melicerta* var. *socialis* (Weber), 1888.

1888. *Oecistes socialis* Weber. Arch. Biol. Liege, 8: 655.

LOCALITY. Victoria Lake, Christchurch, amongst *Myriophyllum*. Temp. 13° C., pH 6.5. Fairly common. Length of specimens approximately 300 microns. This species is generally found in alkaline waters.

Genus *SQUATINELLA* Bory de St. Vincent, 1826*Squatinella geleii* Varga, 1933. Allattani Kozlemenych, 30.

LOCALITY. Lily pond, Botanical Gardens, Christchurch. Temp. 16° C. pH 6.0. Fairly common. Length of body, 120 microns. Length of foot, 22 microns. Length of toes, 10 microns. The anterior hood is large and robust, and the plate at the posterior of the dorsal section is set at about 45° to the longitudinal axis of the animal.

Genus *SYNCHAETA* Ehrenberg, 1832? *Synchaeta curvata* Lie-Pettersen, 1905. Bergens Mus. Aarb, No. 10, p. 27.

LOCALITY. Cook Strait. Length, 280 microns, maximum width, 100 microns. As the animals were partly contracted there is a little doubt about the identification. The specimens were collected by the New Zealand Oceanographic Institute, Wellington.

Genus *TRICHOCERCA* Lamarck, 1801*Trichocerca dixon-nuttalli* (Jennings), 1903.

1903. *Diurella dixon-nuttalli* Jennings. Bull. U.S. Fish. Comm., 22: 318.

LOCALITY. Small pond, Hagley Park, Christchurch. Temp. 20° C., pH 7.0. Not common. Body length, 100 microns. Typical specimens.
